Now, Mr. Engstrum has no contract to sell that power and he tells you fairly and honestly that he has not. The Alabama Power Co. has a contract to sell that power if they can get it. All they have to do is to sit around and tell Mr. Engstrum what they will do, and he will have to hand it over to them. He will never have to make a pound of nitrate. Anybody who could go into that plant with a transmission line could control the sale of that power. He has no way of using it and would have to sell it, and there is only one bidder in that country for power, and that is the Alabama Power Co. I do not believe that this is an auxiliary of the Alabama Power Co. I do not claim that at all.

Now, I am going to make a personal explanation to this committee, and I hope you will receive it in the same spirit in which it is made. As foolish as this contract is, as absurd as I think it is, it is a better contract to-day than the Alabama Power Co. or the Ford contract.

Those contracts, if you examine them carefully, are about as bad as a contract could be; in fact, neither one of the three, in my opinion, is a contract. I am not a lawyer, but I do claim that neither of these three contracts raised to the dignity of a contract, but are simply well worded applications for a hand-out.

I want to make this further explanation. As the Engstrum proposition was first drawn I thought it was an honest and fair one, and I do not say it is dishonest now, because the ambiguities are so plain that nobody could accuse him of trying to get anything under false pretenses. It is right out in print, but the proposition that I took up with the general contractors of America, one of their members, or several of their members, have now got a proposition that is in the hands of the printer and will be out in about two hours, and which will go to the Secretary of War, which I think will meet all the conditions that fail in the Ford, in the Engstrum, or the Alabama Power Co. offers. It will beat either one of them as a producer of nitrates at cheap rates and with less money to the Government. They are putting in quite a sum of the money themselves and they have taken care of it in a businesslike way.

I do not care to review the other two contracts—the Ford or the Alabama Power Co. I had nothing to do with them, but they are just about on a par with the Engstrum contract.

I thank you.

Mr. McKENZIE. Let me ask you this question? Will this new contract you speak of contain any element of chance to be taken on the part of the contractor?

Mr. LEVERING. They take care of their own power and they use their own power, and they take all the elements of chance. They put up a part of the money for the construction of the dam—their share of it. They start right. It will at least save the Government \$20,000,000 over the Ford offer and \$15,000,000 over either the Engstrum or the Alabama Power Co. offer in money. It is a business proposition. The men have been here for years and know a fair contract when they see it.

Mr. McKENZIE. If I understand your position, in analyzing these contracts, the Ford contract is the worst one of all.

Mr. LEVERING. I believe it is.

Mr. McKENZIE. And the Alabama Power Co. is second in iniquity?

Mr. LEVERING. Yes.

Mr. McKENZIE. And Mr. Engstrum's proposition, while you think it is inequitable and unjust to the Government, you still feel it has some elements of virtue in it?

Mr. LEVERING. It has not so much harm in it; that is all. The fangs are not so long.

Mr. MCKENZIE. And you are quite certain it is a safe proposition, so far as the company is concerned?

Mr. LEVERING. Yes; so far as the company is concerned. Yes; it is all right for the lessee.

Mr. MCKENZIE. In other words, you have no apprehension about the company going broke?

Mr. LEVERING. Not at all.

Mr. GREENE. I would just like to ask you a question—whether you took out burglary insurance before you began negotiations with these gentlemen?

Mr. LEVERING. I have known Mr. Engstrum all his life, and I do not think Mr. Engstrum has intended to rob the Government. He has been led by his friends, and they all hope to make some money. They have brought Mr. Goethals here to throw dust in the eyes of this committee—there is no question about it—or to try to, because the Government engineers are doing that work conscientiously and well. They have Hugh Cooper, of New York, who has made more dams than any of them, as their consulting engineer. There is no call for Mr. Goethals to change or perfect the plans.

Mr. GREENE. You say you were in the employ or service of Mr. Engstrum?

Mr. LEVERING. I helped him on this matter after I came here.

Mr. GREENE. Was it a matter of compensation and employment?

Mr. LEVERING. Well, to a certain extent.

Mr. GREENE. Was it a matter of compensation and employment. Were your services engaged by him?

Mr. LEVERING. I went to Muscle Shoals for him, and while there I spoke before the chamber of commerce and connected myself with the proposition, and I felt that after they changed it it was not fair.

Mr. GREENE. I simply want to get at the question of whether you were engaged in the hire of Mr. Engstrum.

Mr. LEVERING. Well, I was to have a sort of working interest in the thing; that is all.

Mr. GREENE. That does not answer the question.

Mr. LEVERING. Will you repeat the question, please?

Mr. GREENE. Were you in the hire and pay of Mr. Engstrum?

Mr. LEVERING. He was paying the expenses; that is all.

Mr. GREENE. Was this a voluntary association on your part, in the sense that you went and tendered your services, or did he seek to engage you?

Mr. LEVERING. I think I brought the matter up to him. I thought there was a chance there to get a good contract.

Mr. GREENE. Have you ever had any definite sundering of your relations with Mr. Engstrum?

Mr. LEVERING. After we talked with Mr. Weeks, and I left Mr. Weeks's office and I thought everything was satisfactory, when I got to their office and found these changes were made I dropped them right there.

Mr. GREENE. Did you drop it or did Mr. Engstrum drop you?

Mr. LEVERING. I dropped it. I walked out of the office.

Mr. GREENE. Was there anything coming to you from Mr. Engstrum?

Mr. LEVERING. I would say not. I guess not. No; I am through with it.

Mr. GREENE. All right; so am I.

Mr. HULL. You have told us about the iniquities of the Engstrum contract, and you have said that the Ford contract was worse.

Mr. LEVERING. I think so.

Mr. HULL. Will you, in your own words, explain to us in what way the Ford contract is worse than the Engstrum contract?

Mr. LEVERING. I would like to ask you if you will allow me to get the Ford contract and read it over again and return after dinner, and then I will go into it again carefully?

Mr. HULL. You have read it, have you not?

Mr. LEVERING. Yes; but I could not refer to it as thoroughly as I could if I had it before me.

Mr. HULL. We can give you a copy of it.

Mr. LEVERING. But I would have to go over it and fix the places, and I will be here after dinner again and will explain it to you.

Mr. HULL. You need not come back, but simply put it in the record.

DEFECTS IN THE FORD TENDER.

1. It limits the production of nitrates to the present capacity of plant No. 2, which does not produce fertilizer compounds. Should the plant be refitted to make fertilizers it could meet but a small part of the demands.

2. Plant No. 2 will consume most of the primary power of Dam No. 2. To provide for the interest, sinking fund, maintenance, and other charges it will be necessary to build Dam No. 3 on the site owned by the Alabama Power Co. This is an uncertainty and may require years of time and large expenditures.

3. The Ford tender is "in whole and not in part." The burden of construction rests on the Government. This, with the delay incident to the litigation now in prospect, leaves but one dependable feature in the tender; that is, Mr. Ford will be given \$18,000,000 worth of property for \$5,000,000.

The maintenance and renewal charges necessary to keep the dams in efficient condition should Dam No. 3 be built on present plans may exceed the allowance provided for interest, sinking fund, and maintenance.

4. There is no guarantee that the nitrate production will be increased to meet the growing demands. Should large industries be established there, to use the power, it would preclude further development of the nitrate plant. The Government, after bearing the burden of the investment and maintenance charges, would become a subsidiary of the Ford interests.

5. Have the Ford undertakings been such a success as to warrant the Government in irrevocably giving to them our one supply of nitrates that is essential to our agricultural interests in peace and may become vital to our national life in time of war? Henry Ford has made a success of light automobile construction. When he usurped the functions of Congress and undertook to adjust the rights of nations he made our country appear weak, impotent, and ridiculous. Was that a success? Does any one put faith in his promise of a 75-mile town? Or the Mississippi River dams? Or the self-propelling boats?

Mr. Ford has commenced operating a railroad. At the inception the Ford propaganda startled us with claims of enormous profits. Now we hear less of it. Mr. Ford may learn the railroad business, but so far his proficiency seems to be in ringing the bell and blowing the whistle. It is to be hoped that the noise will not mislead the Government. Would it be good business judgment to place our vital interests under the management of persons responsible for these visionary projects?

6. When the country decided to provide an ample and dependable supply of nitrates it wrote the final paragraph in our Declaration of Independence of all other nations. With this promise realized we could compete with the world in times of peace and defy it in times of war.

7. This great plant should be completed and kept in action, otherwise it will be a source of expense and soon become obsolete.

8. There are two contenders for the ownership of this public necessity—one a corporation controlled to some extent by foreign owners. This company, at a time when action was more important than language and when during the emergency of war the representatives of the Government depended largely on the support and patriotism of our citizens, secured a contract affecting the value of this project. I am impressed that the Alabama Power Co. should either modify its contract or meet the charge that it is an enemy corporation and its contract is against public policy.

9. The great dam across the Tennessee River distinguishes it as a permanent improvement, not a temporary war measure. The Ford tender asks for a deed to the greater part of this property and a perpetual lease for the remainder, for the avowed purpose of converting it to an automobile factory or other Ford uses.

The Alabama Power Co. ask it as a gift to make it a part of their light and power plant. Under the laws of Alabama they would be in a position to compel its citizens to pay interest on this large investment that cost them nothing.

SUMMARY.

1. The Ford tender requires the completion of Dam No. 3, which is uncertain.

2. It requires the Government to litigate the title to Gorgas steam plant and transmission lines before it becomes operative. This means delay and the ruin of nitrate plant No. 2.

3. The Ford tender does not provide for increasing the nitrate supply. The first right to the power would be vested in the Ford industries.

4. Under the tender the Government would bear the burden of maintenance.

5. This tender will cost the Government more than \$50,000,000, and if Dam No. 3 is not successful there would be little chance of recapturing the property or amortizing the investment.

6. Mr. Ford makes this tender as a dear friend of the farmers, from whom he has acquired millions of dollars. Should he get possession of their fertilizer supply they will realize that he is the "dearest friend" they ever had.

Respectfully,

J. H. LEVERING.

Mr. LEVERING. All right; I will do that; but I don't want it to go in the record without somebody to answer me. I don't want to put anything over in the dark.

Mr. HULL. This is simply for our information.

Mr. LEVERING. Yes.

Mr. HULL. And I think we are entitled to have the information.

Mr. LEVERING. You shall have it, Mr. Hull, on any terms you say; but I want it understood that I am perfectly willing to meet Mr. Ford's people here when I make that statement. I am not trying to hide or put it in the record in the dark; but just as you say. I will do just exactly as you say. I am at your service.

Mr. HULL. We would also like to have your ideas about the offer of the Alabama Power Co.

Mr. LEVERING. Yes, sir; they are here, and I can go into that any time. I do not want to attack anybody behind their backs. That is the way I feel about it.

Mr. MCKENZIE. They have representatives here.

Mr. LEVERING. Yes; they have representatives here.

Mr. HULL. Well, give us your idea of the Alabama Power Co. offer.

Mr. LEVERING. Sure.

Mr. HULL. We want to have it all.

Mr. LEVERING. I do this at the request of the committee, of course. I am not volunteering it. Have you a copy of the Alabama Power Co. offer?

Mr. FIELDS. Here is a copy of their offer you may use.

Mr. LEVERING. Now, in the first place, to start in, the Alabama Power Co., under their proposition, take over the wires between Muscle Shoals and Gorgas. One of the essential things to work that nitrate plant is the quarry at Waco. There would be no chance to get power down there without you hired or bought the wires back again from the Alabama Power Co. That is one point. They would have your line tied up forever.

Another thing is that the 100,000 kilowatts that they give you to operate your plant they take from you the right to go on that dam or make any repairs if it does not keep up to standard output; you can not help it. It goes under the jurisdiction of another department, under their offer, and this second 100,000 kilowatts would be worthless in a nitrate plant that was using the furnace method; now I want to explain to you in a little way about the manufacture of nitrates, and it will be very little, because I don't know but little myself; but there are two processes there, one is the furnace process or the carbide process and the other is the synthetic process. As a matter of fact the synthetic process is now the most satisfactory one to operate. The carbide process is practically out of date; but they leave you those two plants and they put in 250,000 horsepower and give you the second 100,000 horsepower, which you would get intermittently throughout the year. They say 82 per cent of the time. As a matter of fact, it would not be 82 per cent of the time, for this reason, that if the excess power was multiplied by the kilowatt-hour and divided by the number of months it would be about 82 per cent; but part of the time you will have more than 100,000 horsepower there. It won't start up just 100,000 and run even 100,000 for eight months and then stop; but it will vary, and a great deal of the time your plant will not be in full operation, not nearly in full operation, and at other times they will crowd that power on to you when you can not use it. The result would be you would have to have the employees there half of the time idle, and your nitrates would cost you more than it would be possible to sell them for. They will take that power, however, off your hands, because you can not operate the plant with it, and the result is that the plant will depreciate; that is, it will require all the returns from the nitrate plant to keep up the depreciation so that it would be impracticable, and you might as well—and it would be cheaper and better for the Government to include in the Alabama Power Co. offer a deed for the entire property. You will be out of it easier and cleaner.

Now, with that proposition, they would pay you for that 100,000 secondary power. I do not know what pay, but from Mr. Martin's testimony before the committee I imagine it would be a fair price, the same as he is going to pay for the plant at Gorgas. I think it would mean the building that dam under another jurisdiction, and possibly not as high as it is. There is another thing involved. If they finish No. 2 Dam at the present height exactly, they have got you tied up so they can not build No. 3 without doing business with the Alabama Power Co. again. The height of No. 2 would back up the water to practically where the No. 3 is designed to be built. In my opinion, that dam should be raised about 6 or 8 feet and the water driven back to a better location, but that would ruin the prospect of the Alabama Power Co. selling that dam site at No. 3, but the foundation is not good and it should be put either farther up or farther down the stream; but with Dam No. 2 built by them they would hold you so you would have to buy their holding for No. 3 at any price they could get for it, and if you do not build it, of course, they could build it themselves and get the extra power. It would be their power then, and not yours. For instance, it would then increase their primary power quite considerably, and if they did increase their primary power it would not increase yours. You would still have secondary power under their tender. There is no assurance there, if they increased their primary power, you would get any benefit of it, and they would then own the Gorgas plant, which is worth, I should say, five or six million dollars, the transmission line which you have practically built, and the steam plant at nitrate plant No. 2 which you have built. Those three plants would cost, well, in the neighborhood of \$20,000,000. Then they have the \$17,000,000 you have in Dam No. 2, which they take over, and they get at least \$35,000,000 with which to finance themselves to finish Dam No. 2 and give them a power equipment that will pay interest on \$50,000,000. That is to say, they talk about financing themselves; they are not financing themselves at all; the Government is financing them, just as much as they would Mr. Engstrum, because you are turning over to them property that you can go out into the market and borrow the money on to complete Dam No. 2, and it is not, in my opinion, a fair proposition. You might as well simply give them a bill of sale for the whole thing and let them have it, and you will save a lot of trouble hereafter.

Mr. FIELDS. Mr. Levering, how did you say you happened to come to Washington?

Mr. LEVERING. I was interested in a power project in California, and under the law we could not get any action, and this power bill was pending a long time, and I came here originally to help if I could, to see if we could not get the bill over. We got the bill over, but it was in such shape that it never has done us any good, but we got the bill over, however.

Mr. FIELDS. How did you happen to become interested in the Muscle Shoals proposition?

Mr. LEVERING. I made a set of plans, if you will remember, for the Government or for the power board for Great Falls, and while that was up I got interested in the discussion of that kind of work, and I went down and looked over Muscle Shoals. I knew the Government was going to stop the appropriation, and I thought maybe we could see if there was a chance to get some of my friends interested in the project, and maybe we could get to work, because that would not be built under the power act, and it was simply a straight business proposition.

Mr. FIELDS. And that was before you were connected with Mr. Engstrum?

Mr. LEVERING. Well, that was about the time. I talked with him often off and on for quite a while.

Mr. FIELDS. That was the trip you made at the expense of Mr. Engstrum?

Mr. LEVERING. He paid part of that expense; not all of it. There was another power company that paid part of the expense.

Mr. FIELDS. What power company was that?

Mr. LEVERING. The Arkansas Light & Power Co., an Arkansas corporation.

Mr. FIELDS. Have you been associated with any other power companies other than Mr. Engstrum in formulating plans for the lease of Muscle Shoals?

Mr. LEVERING. Not until after I withdrew from the Engstrum proposition. I had a talk with General Marshall, of the Associated Contractors, and he thought that it would be worth while to see some of their members who possibly were in a position to finance an offer in a businesslike way. I said that I felt I had done so much work on it I did not like to see it wasted, and we

finally made a proposition, and within a couple of hours it will be ready to be delivered to the Secretary of War. It is probably ready now.

Mr. FIELDS. And you will be interested in that proposition?

Mr. LEVERING. Yes, sir; and I want it up here and if there is anything wrong with it I want you to kick me out right away. I think I have covered the objections of the other three.

Mr. STOLL. Your principal objection to these offers is that you are not in on them?

Mr. LEVERING. No, sir; I am sure that these offers are not fair to the Government, and I would not go into any of them. I might if they were changed somewhat, of course.

Mr. STOLL. When did you get out with Mr. Engstrum—when Senator Butler got in?

Mr. LEVERING. No; Senator Butler and Mr. Engstrum and I all called on Mr. Weeks and we had what I thought was a fair understanding with Mr. Weeks. After we got back to the office Mr. Butler and Mr. Engstrum or somebody—I think it was both of them—changed from a lump sum to a cost plus and put in—

Mr. STOLL. I do not care for the details about that. You are not in on that contract now?

Mr. LEVERING. No; I don't want to be in with it.

Mr. STOLL. You are not in on the Ford contract?

Mr. LEVERING. Not at all.

Mr. STOLL. And you are not in on the Alabama Power Co. contract?

Mr. LEVERING. Not at all.

Mr. STOLL. And you are against all of those. Now, this fourth one you will be in?

Mr. LEVERING. Yes, sir.

Mr. STOLL. So you are for that?

Mr. LEVERING. Yes, sir; and I hope you will be, too, and I think you will when you see it. I think you will; I hope you will.

Mr. STOLL. From whom is it coming?

Mr. LEVERING. The tender is signed by Thomas Hampton, one of the largest producers of bauxite in the country. He has been selling his bauxite.

Mr. STOLL. Where is he from?

Mr. LEVERING. The deposits are in Georgia.

Mr. STOLL. Is it capitalized?

Mr. LEVERING. Yes; it is capitalized.

Mr. STOLL. I mean is your company going to capitalize?

Mr. LEVERING. I am not in the company. I am simply an engineer for them. They have business there and are established. Mr. Hampton is going to Texas; they have some oil fields; and he is going at 8 o'clock. I can bring him here between 2 and 3 o'clock if you want to talk with him.

Mr. STOLL. I do not want to talk with him.

Mr. LEVERING. They are business men and ready to put the proposition over.

Mr. STOLL. Who first drew your attention to Muscle Shoals?

Mr. LEVERING. The Muscle Shoals came up in the discussion of the Great Falls matter.

Mr. STOLL. And you drew Mr. Engstrum's attention to it?

Mr. LEVERING. I drew Mr. Engstrum's attention to it, I think.

Mr. STOLL. And now he has left you out in the cold. Did you draw this other man's, Mr. Hampton's, attention to it?

Mr. LEVERING. Now, I do not know that I did. Mr. Hampton was figuring on it. I have done Mr. Hampton's consulting work for quite a while. I think he spoke of it himself to me. I do not think that I did. He asked me if I had data enough so I could make up the estimates for him, which I have done. I have done Mr. Hampton's work off and on for more than a year.

Mr. STOLL. Who is in it besides you and Mr. Hampton?

Mr. LEVERING. I am not in it at all.

Mr. STOLL. Who is in it besides Mr. Hampton?

Mr. LEVERING. I do not know the names of the members of his association. I can find out for you and let you know at 2 o'clock.

Mr. STOLL. Did you not put him up to make the bid?

Mr. LEVERING. No; I talked with him about it just a few days ago. I think it was Saturday. Yesterday was the last time I talked with him, and we got the proposition in shape and sent it to the printer and had it printed, and we

are going to send it to the Secretary of War to-day. I am not a partner in the one that is coming. They have their own capital and their own organization. I was told by General Marshall, who had charge—

Mr. STOLL (interposing). What part do you play in it?

Mr. LEVERING. I was simply as an engineer to do this work.

Mr. STOLL. That is all, Mr. Chairman.

Mr. MCKENZIE. We are much obliged to you, Mr. Levering.

**FURTHER ADDITIONAL STATEMENT OF MR. THOMAS W. MARTIN,
PRESIDENT ALABAMA POWER CO.**

Mr. MCKENZIE. Mr. Martin is present this morning and wants to make some additional statement, as I understand it.

Mr. MARTIN. Mr. Chairman, I will take only a short time, not over five minutes of the committee's time this morning.

I have been asked whether our company is interested in propaganda which is coming to the committee, for or against other offers, propaganda which is coming to Members of Congress for or against other offers. I have been asked whether any other company is interested in the proposition of the Alabama Power Co. in connection with this matter. I wish to state that our company is in no way concerned with or responsible for any propaganda of any kind which is coming to members of this committee or to Members of Congress, and that no other company engaged either in the power business or any other business is in any way interested in our proposition in this matter, nor in any way concerned with any financing of our proposition; that it is solely and alone the proposition of the Alabama Power Co.

Now, I wish also to state that the papers contain resolutions which appear to have been adopted by college fraternities, by churches, by lodges, and by institutions which ordinarily are quite remote from matters of this kind, apparently interested in one of the pending offers: that is commonly called propaganda. I just want to mention that. It can not be otherwise than interested parties who are concerned in going nation wide and creating a situation. Our company has been in no way concerned in one or the other of those situations. In so far as its fairness is concerned, in some respects, I wish to direct the committee's attention to one point. A telegram has appeared upon the committee's record which refers to the offer of the Alabama Power Co., and which refers to our company having obtained a lease on a steam plant by tricky methods, and then having set up rights.

The gentleman who sent the telegram was told that our company had presented a claim, or statement to this committee claiming the right to hold the Sheffield steam plant under a lease which was made by the Secretary of War last fall. I have stated to the committee in answer to direct questions, that our company has made no such claim, and the committee knows our company has made no such claim. The Secretary of War leased that particular steam plant under a lease which is subject to revocation at any time by the Secretary of War, and we recognize it. Our rights are solely in connection with the Warrior steam plant.

Nevertheless, Mr. Chairman, that very lease was made the basis of a newspaper's story emanating from sources interested in one of the offers here, and was circulated as an attack against our company and formed the basis of the telegram to which I have referred. When the gentleman's attention was called to it he apologized for it, but said that the opinion was expressed by the man who took it up with him that he would not correct it, as the Ford supporters and the Farm Bureau people would not permit him to do so.

I mention that as an example of the propaganda which is based upon a misstatement of facts.

In so far as our obligations are concerned as a public service company and our relations to the whole matter, we stand on the record of our performance in Alabama and our development of water powers up to date and the distribution of power at fair and reasonable rates. Our relationships with the public in the State develop naturally—questions which we work out in due course.

That is all I care to state, Mr. Chairman.

Mr. MCKENZIE. If there are no questions any member of the committee desires to ask Mr. Martin, we are very much obliged to you.

Mr. MARTIN. Mr. Chairman, Mr. Frothingham wishes to make a brief statement in connection with matters related to our offer which is before the committee.

Mr. MCKENZIE. The committee will be glad to hear Mr. Frothingham.

STATEMENT OF MR. FRANCIS E. FROTHINGHAM, OF COFFIN & BURE, BOSTON, MASS.

Mr. FROTHINGHAM. Mr. Chairman and gentlemen, I wanted to make a statement about this whole situation as it appealed to me, because it has been my fortune to visit, in connection with my business, every State in the Union and Province of Canada; so I have had a particularly good opportunity to see and study hydroelectric propositions and public utility situations in general.

In doing so it has always been my effort to discover the facts, as far as I could, and to draw the deductions that seemed necessarily to follow from those facts so far as in my power lay, and I think I can safely say that nowhere in North America is there a hydroelectric situation where the possibilities in themselves are more interesting or where, if they are connected together, interconnected and coordinated in a complete fashion, they can perform a greater service to the public. If I may, I would like to draw a broad picture of this situation as I see it.

North of Florida the Allegheny Mountains parallel the Atlantic coast of North America throughout its entire length. These mountains run out into the lowlands in northeastern Alabama at their southwestern extremity. This is a very simple statement, but it is a fact that is directly responsible for the possibilities to which I shall refer. Off the flanks of the Allegheny Mountains flow many power streams, with many hydroelectric powers developed, but still with many opportunities left for development, but the powers on the streams that flow off of this southwestern flank of the mountains are the only source of hydroelectric power that are available for the entire State of Alabama, the entire State of Mississippi, western Tennessee, eastern Arkansas, and Louisiana. These are facts determined by nature, and I would like to indicate what these natural conditions are.

In prehistoric times the Atlantic coast was not where it is now, but was some distance inland. In those ancient times the coast of the Atlantic Ocean and the Gulf of Mexico followed a line which approximately to-day connects the headwaters of navigation of the navigable streams flowing into the Atlantic and the Gulf, and would roughly pass through these points, in the region of which I am speaking: Columbia, S. C.; Augusta, Macon, and Columbus, Ga.; then westward through Montgomery, Ala., and then, turning northward, through Tuscaloosa, Ala., and still north through Sheffield, and then in a wide swing to the north and west, crossing Tennessee, the Mississippi River, and returning to the Gulf some distance west of the present location of the Mississippi River. Those facts absolutely determine the conditions of which I am speaking.

On the sea side of that line, except for the navigable rivers of which I have spoken, there are no streams except of small size and very minor importance. There can be in this area no hydroelectric developments except very small ones at small falls on these local streams, which, in the aggregate, as against the powers we are speaking of, amount to nothing. Those are the facts as nature made them, and there is no hydroelectric power, speaking in general terms, in Mississippi, none in western Tennessee, none in Louisiana, none in eastern Texas, almost none in Oklahoma, and in Arkansas only a very small amount west and northwest of Little Rock.

That means that this entire region, if it is to have electric power, can only get it from these powers on the southwestern flank of the Allegheny Mountains. You have had a map laid before you, and if you will draw a circle with the center on Birmingham and a radius of 300 miles, it would include New Orleans, La., and Little Rock, Ark. Mobile is 200 miles away, and Memphis and Nashville are the same distance. The entire State of Mississippi is inside of that 300-mile limit. If these powers I shall speak of are coordinated and brought together in the only way that will enable them to realize to the maximum their potentialities, it will be possible for this region to be served from such a source, and I really think it will not be possible otherwise.

The three great power streams of Alabama are the Tennessee, the Coosa, and the Tallapoosa Rivers. It has already been explained to you that the Tennessee is a river of very rapid and extreme variations in flow, varying from a minimum at Muscle Shoals of something like 7,000 second-feet to a maximum of 500,000 second-feet. That means the number of cubic feet of water that passes a given point in the river in one second.

I might compare this river with a couple of other rivers that we all know. The Colorado River at Glen Canyon in northern Arizona has a drainage area of some 100,000 square miles. The Tennessee River at Muscle Shoals has a

drainage area of 30,000 square miles. But the Colorado River has a minimum flow of 3,500 second-feet and a maximum flow of only approximately half of that of the Tennessee. The Mississippi River at Keokuk, with a drainage area of approximately 110,000 to 120,000 square miles, has a minimum recorded flow of about 12,000 second-feet, and a maximum which is only three-quarters of that of the Tennessee. That means that the Tennessee River is chronically an irregularly flowing stream. From Knoxville to the Ohio River, with the exception of the falls at Hales Bar and at Muscle Shoals, the river is what is called a sluggish stream, and the topography of the country is such that there is no opportunity for reservoir capacities that relatively have any particular consequence. If you use the 7,000 second-feet of water in the Tennessee River over the head to be developed at Muscle Shoals you will get from 60,000 to 70,000 horsepower. But that is a misleading figure to use, because the average minimum flow of the river is not so small over a considerable period of time: the average minimum flow will produce from 100,000 to 125,000 horsepower. I am speaking now about continuous power. If the capacity of those stream flows is used in 12 hours of the day, instead of 24 hours, those figures would be approximately doubled. I think that shows that if advantage is to be taken of the power in the Tennessee River that is available for less than all the year, so that it can be available all the time, it must be supplemented by power from some other sources; you can not make use of the less than all the year flow of the Tennessee River otherwise.

This means that the Tennessee River is in itself, as an independently power-producing stream, disappointing and of very little availability.

The problem is how to make use to the advantage of the greatest number of people in all sorts of ways these less than all the year flows of the river, which amount to a great deal.

It so happens that on the Coosa and the Tallapoosa Rivers there are not only large hydroelectric development possible in certain places, but nature has so designed the topography of their drainage areas that there can be created exceptionally large storage reservoirs. That, in turn, means that if those capacities are tied together by transmission lines and in every way known to science interconnected, the greatest value that is in the Tennessee River may be realized. Under such an interconnected system as markets grow to demand its fullest power possibilities, the results are very impressive. Under such a scheme of full and complete development the Muscle Shoals plant might be developed economically to 500,000 or 600,000 horsepower, and the aggregate of hydroelectric installed capacity which might be created within a 90-mile radius of Birmingham is in the neighborhood of 1,500,000. And the Muscle Shoals power will have reached the full of its usefulness because it is one limb of a whole live functioning body.

Now, the problem is so to develop those capacities that they can be made progressively available in the most complete way possible. When I say one million and a half, gentlemen, I am mentioning an approximate figure, and I do not mean power that is available from hydroelectric sources all the time. No installations are made in that way. Power is used by the ordinary public less than all the time, and the storage reservoir and pondage capacities mean that the water may be held back during the night and used during the day; so the figures I have mentioned are the figures showing the approximate ultimate hydroelectric installation. But those figures can only be realized and full advantage taken of them if coordinated, as I have indicated, by some single agency. No combination of agencies can accomplish the equivalent results that a single agency can, if every advantage is to be taken of the diversity factor which such a combination can realize.

Now, by diversity factor I mean this—and I speak of it because it is an exceedingly important element for the public to take advantage of in its own interest. With a combined system widely scattered loads may be averaged, so that the average aggregate demand is much less than the sum of the individual demands. That means that there is less requirement for installation of power producing and distributing capacity and a correspondingly less investment to take care of that same business. It means also that the shortcomings of one source of power may be offset by the availability of another source, and that whatever power is generated at one source or another may find its way to the market by the most direct and most efficient route. That is applying the principle of load factor to all the various portions and to the whole of such a property.

Now, the Alabama Power Co. has been devoting itself to the development of these resources along these lines. Until the Alabama Power Co. brought money into the State and began work there was no money available for such a purpose. It is confining itself to the manufacture of power. The old adage says, "Shoeman, stick to your last." If you apply yourself to the manufacture of a single product you become proficient and expert at it; and this electric business is a most highly technical and highly specialized business. I think that I have, perhaps, misused the word power, and I, perhaps, should not have used it in this connection. I should have said, rather, that the Alabama Power Co. manufactures electricity because we think of power rather in connection with industrial uses. Electricity is a universal medium; it is used for many purposes. Wherever transmission lines or electric wires may go electricity is made available, and it can immediately be either used for light, heat, or for power. It is the same electricity that turns the 1 inch in diameter armature of a little motor that stirs the drinks in the soda-water shop and that turns the 10 foot in diameter armature of the 20,000 horsepower motor that turns the rolling mills of the big steel plants at Bessemer or turns the motors under the street cars. It is the same electricity that performs a thousand and one miscellaneous services of our everyday life, and which we can scarcely get along without. In the butcher shop it runs the meat-cutting and meat-chopping machine; in the grocer's, the coffee grinder. In our homes it is used in a thousand ways—to heat water, to warm the bathroom, to run the sewing machine, to run the washing machine, the dishwasher, to cook our food, to keep the fan going in hot weather. Its uses are so manifold and so widespread that they simply can not be enumerated. For the farmer the use of electricity is very important, in the difficulties under which he works. With electricity he cuts corn for his silo and relieves the onerous duties of farm life in many ways, to say nothing of substituting electric light in house and barn for the dangerous oil lamp and lantern.

And though not so large in amount as the power use, electricity is put to a much more important use in adding to community health and safety. There is nothing more effective as a health or police officer than electric lights in otherwise dark rooms and passageways and in the streets, alleys, and public places of towns, large and small. So the Alabama Power Co. is in the business of making electricity for general use and for needful service.

There are many towns, gentlemen, which, until the coming of this company with its service, never had any electricity, or had it for only part of the day. If any of these lines reach out in tentacle fashion into the country to a town, that town not only has service 24 hours a day, but it has it in unlimited quantities, and it can advertise for industry to come to it to increase its population and business—advertising it has an abundance of cheap power. It offers that town an opportunity to make the most of any location or other favoring condition it may have.

When this is said, I think it may go through the minds of some of you gentlemen that this is simply building up a great monopoly, and that monopoly is contrary to public policy. Let us look at that proposition a moment and see what it means.

I think when we think of monopoly we usually imagine some industrial concern manufacturing a product, and that it manages in some way to exclude everybody else and charge the consumer all the traffic will bear and we do not like it and we want to avoid it. And why should we? But does that condition apply in this case? Evidently and absolutely not. The Alabama Power Co. is carrying on its business, and will have to continue to carry on its business under public regulation, either the regulations of the State, of the Congress, or of the Federal Water Power Commission. There is no twilight zone between those jurisdictions; where one does not apply the other does. What does that mean? It means that that company is allowed to earn only a fair return on the money actually used in the public service.

That return anybody is entitled to. Who determines all those questions? The public authority. It determines what money shall be spent; whether or not it is right and proper to raise it at a given time, and what the rates for service shall be. As the Secretary of War has stated here "these regulating laws all provide for service to everyone without discrimination." That means, then, not that the Alabama Power Co. is building up a monopoly hostile to the interests of the public, but that the public has decided that it will regulate that monopoly in its own interests. In other words, that it will be the monopolizer and not the Alabama Power Co. or anyone else. It simply elects who it

will allow to run that business. And by doing so, and by allowing private concerns to conduct the business, it takes advantage of private initiative, which has been at the base of all the growth and prosperity that this country has experienced. The question is, how that private initiative can be harnessed in the public interest. The public decided, in effect, that it will monopolize this business, and it determines how it shall be run for itself. But, you may say, the law of Alabama requires that a certificate of convenience and necessity shall be granted by the commission, after a hearing, before a competitor may engage in business in any town which the company is already serving. True; it protects the Alabama Power Co. or any other public utility from unfair competition. But in whose interest is that protection? It is in the public's interest, because the public has determined that it will not be subjected to the annoyances and the expenses of competition in a service so universal, necessary, and vital as this is. It will not stand for duplication of poles and wires in the streets, for two power stations, where one is sufficient, or for any other duplication of expense, all of which must, sooner or later, no matter how we may try to avoid it, be absorbed by the public.

May I illustrate the results of competition, by the experiences a number of years ago in La Crosse, Wis. Competition started against the local electric light company. As a result of it there was a reduction of rates and price cutting until the inevitable happened, and one company failed and the other took it over, and it got back again onto its feet by making charges and rates which would take care of all expenses. That company had scarcely gotten on its feet when there was another case of competition, with the same result. Then that company had hardly gotten under way again when there was more competition of the same kind. It happened four times in the city of La Crosse, and finally the Public Service Commission of Wisconsin rightly decided that when that sort of thing went on it was an injury to the city, and that the protection of the community required that a certificate of public necessity and convenience be secured before competition could be inaugurated. Now, so far as the public is concerned that simply stimulates private operation, because private management knows that if it does not perform its duties properly and competently, and some other agency can come into its territory and perform those duties better, the power of control which lies in the public will say that the other agency can do it.

In other words, I come around to this conclusion, that it is the public that controls the situation in its own interests absolutely, and that in allowing the Alabama Power Co., or any other private agency to make developments along the lines I have indicated, which insure the maximum of service at the least cost to the greatest number of people, they are taking advantage of private initiative to its own gain.

Now, may I touch upon one more point, and then I will be through. I take it that what the Government of the United States wants in connection with Muscle Shoals, leaving words aside for the moment, is that it shall be put to the maximum possible use in the best interest of the people, as it sees it. That maximum possible use, as I have very briefly tried to explain, can only be had if there is interconnection, full and complete, and every advantage taken of the resources available, so that no development will be made which only realizes part of the possibilities, and may be in the way of future and larger possibilities. The fact that the Alabama Power Co. can develop no hydroelectric powers without the consent of the Federal Power Commission or of Congress, insures that. Now, the Government has taken its position, partly as a result of its experiences in the war and partly realizing that the farming industry is at the base of our national prosperity. It has said that we want, first, to be sure that the power at Muscle Shoals is available for emergency in case of war, for the manufacture of nitrates.

Let us see how the Alabama Power Co.'s proposition answers that requirement. It leaves the nitrate plants and the quarry which supplies them in the possession of the Government, and it gives to the Government, free of cost, 100,000 horsepower, so that the Government not only has the plants which it has built for the production of explosives, but the free power with which to run them. And not only that, but if the Alabama Power Co. is allowed to finish the Muscle Shoals plant, it has started a great power system on its way so that as time goes on and the markets increase, there will be developed such an aggregate of power in that territory that in the event of war the Government will have more power available, because it has the right to reach out and take it, than it can conceivably use. In other words, as I see it, the Alabama Power Co.'s proposal answers that requirement of the Government 100 per cent.

The second thing that the Government wants is that Muscle Shoals shall be available for the manufacture of fertilizer. You gentlemen know that in the West, where water is scarce in the arid regions, the highest use of water is the irrigation use. The power use of water is second, and power permits are always granted subject to the superior rights of irrigation. In a similar way, if you choose, the Government wants to be sure that there is always power available for the manufacture of fertilizer. The Alabama Power Co. offer leaves the nitrate plant in the hands of the Government and provides 100,000 horsepower without cost to the Government, or to any other agency that the Government wants to specify, in its own discretion, to manufacture fertilizer, and the Government is at liberty to give any additional subsidy it cares to give beyond the 100,000 free horsepower to whomever it chooses to select as its lessee.

May I say in that connection, I doubt very much, having human nature in mind as I have seen it, if a manufacturer does not concentrate on the manufacture of fertilizer that it will be successfully done. If anybody manufactures fertilizer and also goes into the general manufacturing business, one or the other is going to be more successful, and the less successful business is bound to receive less attention and to fall by the wayside. In other words, I think the Alabama Power Co.'s proposal meets the second demand of the Government completely.

With regard to the balance of the power, so long as these two requirements are taken care of the Government is concerned only that the power shall be put to its maximum use for the greatest number of people over the greatest extent of territory possible. That can only be accomplished—and I say "only" advisedly, because the war has taught us that to squeeze the last bit of power out of existing power facilities there must be interconnecting transmission lines and every advantage taken of the diversity factors and the load factors I have spoken of—that can only be accomplished by opening the way for the possibilities in Alabama to be taken advantage of to their maximum.

The Alabama Power Co., by virtue of its experience, by virtue of the far-sightedness it showed in working with the Government engineers, developed in conjunction with them a plan which was approved by them, for the development of Muscle Shoals, which would have been accomplished but for the intervention of the war, is in the best position to do this. The company is ready now to go on, as it might have done, had the war not intervened, and that power will be put to public use and service wherever markets require the extension of its lines in Alabama and within a radius of 300 miles, and gradually within a radius of 400 miles and more, bringing cheaper power to many communities than they could otherwise get. As time goes on and these facilities are coordinated, one after another, the result will be that the cost of production will inevitably come down. And as it goes down, the jurisdiction which the public authorities have over the operation of this company or of any other company doing a similar business, is complete and final, and limits that company to a fair return on the money which the public authorities have agreed, after investigation, is spent in the public service. So I think the power company in its offer to complete the work, without further cost to the Government, meets this demand of the Government for the most complete general use of Muscle Shoals, 100 per cent.

Now, gentlemen, I have tried to say nothing that I would not have said had I been a manufacturer, we will say, of broom handles, but with an interest in public matters and a desire to serve the common weal. But I happen to be a member of the firm of Coffin & Burr, a banking house in Boston, and, as I have indicated to you, my business is to keep in touch with these situations. I have studied this one thoroughly, and I pass along to you what seem to me to be the facts in the case and the deductions that must inevitably be drawn therefrom.

I thank you for your patience.

The CHAIRMAN. It is about quarter past 12 o'clock; to-day is unanimous-consent day in the House, and many of the members of the committee want to be present in the House for a while at least. Can you come back at half past 2 o'clock this afternoon, so that the members of the committee may ask you such questions as they desire?

Mr. FROTHINGHAM. I am at your service, sir.

The CHAIRMAN. If you can do that, we will appreciate it very much. We will take a recess until half past 2, and then the members of the committee will ask you such questions as they desire.

(Thereupon the committee took a recess until 2.30 o'clock p. m.)

AFTER RECESS.

The committee met pursuant to recess at 2 o'clock p. m.

STATEMENT OF MR. FRANCIS E. FROTHINGHAM, OF COFFIN & BURR, BOSTON, MASS.—Resumed.

Mr. FROTHINGHAM. Mr. Chairman, I wonder if I may have permission of the committee to add a word to what I was saying this morning that I did not quite get around to.

The CHAIRMAN. Yes; you may finish your statement.

Mr. FROTHINGHAM. I wanted to refer to another aspect of the proposition of the Alabama Power Co.

All through the congressional discussion which finally resulted in the Federal water power bill, in which it was determined that the Government should retain control over those hydroelectric powers and possibilities that in its jurisdiction in the public domain and on navigable streams, I was throughout in sympathy with that position of the Government. Many of my associates, or at least some of my associates, in the business, were not. I am not referring to anybody here, but to those with whom I generally come in contact. I think now all are agreed as to the wisdom of that policy.

The CHAIRMAN. How many months did it take to come to an agreement upon that policy? It was pending a long time in Congress, was it not?

Mr. FROTHINGHAM. It was a matter of several years, sir; and during that period the Government in very deliberate manner matured its policy with regard to the handling of the powers in the public domain and on navigable streams, and it deliberately, if I understand it, took the position of nongovernmental operation but of licensing to others the developments and uses of these powers under carefully laid down restrictions, among which were a grant of 50 years only with the right of recovery by the Government if it wanted to, and the development and operation under very carefully prescribed terms to be laid down by the Federal Water Power Commission, so that whatever was done under the bill was under the most careful and complete regulation, and I submit that the proposition of the Alabama Power Co. completely complies with that policy, and that if the war had not intervened undoubtedly this Muscle Shoals and the other Tennessee River proposition would now be included in the jurisdiction of the Federal Water Power Commission, so that all these matters would have come up before that body. So not only does the power company's proposition comply with that deliberately chosen policy of the Government, but under present conditions, where the utmost governmental economy is sought, the fact that the company completes the development at its own cost is no slight consideration.

The CHAIRMAN. Do you believe that that provision in the act of the 3d of June, 1916, which authorized the beginning of the water-power project and which contemplated that no private party should be joined with the Government in performing this work, would have been altered if we had not gone into the war?

Mr. FROTHINGHAM. My personal feeling is, sir, it would not have been brought forward if we had not gone into the war. I think it was entirely prompted by the thought that the Government must itself have control against any other during the emergency.

The CHAIRMAN. That was the reason, as I recall, why that language was put in.

Mr. FROTHINGHAM. That was my impression, sir.

The CHAIRMAN. But when we got into the war, of course, those outside companies were asked through our War Department officials to help the Government in carrying out these various provisions.

Mr. FROTHINGHAM. Yes, sir.

Mr. MILLER. Mr. Frothingham, your idea is that it is to the best interest of the people of the southern States that this Muscle Shoals property be given, or rather that the offer of the Alabama Power Co. be accepted.

Mr. FROTHINGHAM. Yes, sir.

Mr. MILLER. Now, you are looking at that from the standpoint or as one element—the stability of the securities of the Alabama Power Co.?

Mr. FROTHINGHAM. I think not, Mr. Miller.

Mr. MILLER. If you had no interest in the Alabama Power Co. and your firm had no interest, and you never expected to have any interest, would you have appeared here in the same interested manner that you have, Mr. Frothingham?

Mr. FROTHINGHAM. I should have been glad to, Mr. Miller.

Mr. MILLER. Of course, that is an old idea of dividing the country up and having certain localities where some interest is paramount and there are no competitors. We have that in the West and have had it for years, but, nevertheless, we are in this position, Mr. Frothingham: While the Alabama Power Co. has been in business in the State of Alabama, I think, in the neighborhood of 17 years, it has never improved the Muscle Shoals water power. Nobody has improved it. The United States Government has attempted to and did go ahead there. Now, after the United States Government has started in and put \$17,000,000 into the enterprise, the Alabama Power Co. expresses a willingness to go and complete the enterprise, making use of the \$17,000,000 that the Government has put in. That is the proposition, as I understand you.

Mr. FROTHINGHAM. Not at all, sir.

Mr. MILLER. Are you sure you have the Alabama Power Co.'s proposition correct?

Mr. FROTHINGHAM. I think so.

Mr. MILLER. And you say the Alabama Power Co. does not and will not absorb this \$17,000,000 we have put in and get the use of it without paying anything to the Government?

Mr. FROTHINGHAM. Mr. Miller, is it permissible for me to answer these questions in my own way.

The CHAIRMAN. Why, certainly.

Mr. FROTHINGHAM. I think, Mr. Miller, you have asked several questions in one, so to speak.

Mr. MILLER. I did not intend to; I intended to ask that last question and I will ask the reporter to read it and see if there is more than one question involved.

(The stenographer read the question referred to as follows:)

"Mr. MILLER. And you say the Alabama Power Co. does not and will not absorb this \$17,000,000 we have put in and get the use of it without paying anything to the Government?"

Mr. FROTHINGHAM. The Alabama Power Co., as I understand the situation, long before the war, took steps to see what could be done with the development at Muscle Shoals. Now, it is apparent, I think, that the amount of money involved before any power could be deliverable from the Muscle Shoals development was such that it was absolutely imperative, as a matter of business and sound progress, to make other power developments first, to load those developments and gradually increase the business which was available, until the time arrived when an expenditure of money on Muscle Shoals would make it possible for that expenditure to earn a return.

Now, in following that policy, which I think you will agree is an eminently sound policy, the Alabama Power Co. reached a point where it believed it could go ahead with that project, if it could get the necessary authority. That authority could only come from Congress at the time. There was no Federal Water Power Commission. The Alabama Power Co. studied this situation with the utmost care, in complete cooperation with the Government engineers, who represented solely the interests of the Government, and it was apparent to both parties that unless this development could be made in coordination with the others which I have spoken of, it was an impracticable proposition, but that in such coordination there was a basis on which the project could be entered upon, and accordingly, a report was made to the United States Government, as I understand it, in the hope that when Congress duly looked into it, it would give the necessary authority; and at that time the war intervened and everything took an entirely different course.

Now, the war has come to an end and the question is whether or not, as I see it, sir, the Government will revert to its former policies or whether it will not.

In the meantime the business of the Alabama Power Co. has grown so that by the time the Muscle Shoals project can be completed to the proposed installation, there ought to be a sufficient market to absorb its then output as a result of that expenditure, so that the undertaking will be financially successful and not financially a failure.

I wanted to make that statement, if I might, to answer your question that the Alabama Power Co. had done nothing; that the situation had been left unattended to, so to speak. The reasons, I think, are as I give them.

With regard to the \$17,000,000, the original plan contemplated, as I understand it, that the Government would carry its portion of the expense or that

portion of the expense which had to do particularly with the capitalization of the river. I understand it is still asked of the Government that it shall do that.

Now, the exigencies of the war have carried the proposition as far as it is. If the Federal Water Power Commission gives authority to go ahead under such jurisdiction, the right of recovery exists, and when the right of recovery is exercised, that expenditure all returns to the Government, and if I understand the proposition, in the meantime, the 100,000 of free horsepower may be translated into terms of interest on that investment by the Government. Do I meet your question, sir?

Mr. MILLER. Then I understand that your answer to my question is in the affirmative, that it does?

Mr. FROTHINGHAM. Does what?

Mr. MILLER. Gets the benefit of the \$17,000,000 we have put into the dam.

Mr. FROTHINGHAM. On paying interest for it; yes, sir.

Mr. MILLER. Where do they pay us interest?

Mr. FROTHINGHAM. I just said that if the 100,000 horsepower may be translated into terms of interest, the value of the power—

Mr. MILLER (interposing). That is not interest. Let us talk frankly. Let us not juggle with words. They are paying us no interest on the \$17,000,000 that is already in the dam. Is not that the fact, under the offer of the Alabama Power Co.?

Mr. FROTHINGHAM. I think, sir, it depends a good deal upon how you look at it.

Mr. MILLER. You know what interest is, and I know what interest is, so let us not juggle with the word "interest."

Mr. FROTHINGHAM. And what is interest?

Mr. MILLER. You know what it is, do you not?

Mr. FROTHINGHAM. It is a return on an investment, and the return of 100,000 horsepower—

Mr. MILLER (interposing). Interest, according to its legal definition, is a certain amount of money paid for the use of money. That is what interest is.

Mr. FROTHINGHAM. Money or its equivalent, is it not?

Mr. MILLER. No, sir; there is no equivalent about it. There can be no equivalent inherently. Now, we have got \$17,000,000 in the dam. The Alabama Power Co. gets the use of the \$17,000,000 throughout the period of the 50 years that it takes this lease, and I am asking you if under the contract or offer of the Alabama Power Co. the United States gets any interest on its investment put in the dam?

Mr. FROTHINGHAM. Mr. Miller, I am not in the employ of the Alabama Power Co.—

Mr. MILLER. No; but you are interested in it.

Mr. FROTHINGHAM. I was not a party to the framing of that contract, and I came here to speak on the broad, general grounds of the whole proposition. I think Mr. Martin has answered that question or similar questions.

Mr. MILLER. I was simply asking the question of you, and if you do not care to answer it, Mr. Frothingham, of course, you need not.

Mr. FROTHINGHAM. I will say, with frankness, sir, my impression is that 100,000 horsepower has an equivalent money value, and perhaps I may be mistaken in thinking it, but I did think that that equivalent money value might be taken as an interest on the investment.

Mr. MILLER. It is not.

Mr. FROTHINGHAM. If you do not want to allocate it in that way in your mind—

Mr. MILLER (interposing). No; I would never allocate it in that way in figuring interest, and I do not think your banking firm does either.

Now, let me ask you this question about another angle of the proposition. I believe you said the flow of the Tennessee River was what—7,000 second-feet?

Mr. FROTHINGHAM. I said that I understood the extreme minimum flow had been 7,000 second-feet.

Mr. MILLER. How many horsepower will that generate?

Mr. FROTHINGHAM. Under the head to be developed, I think, between sixty and seventy thousand horsepower.

Mr. MILLER. Now, we get the second 100,000 horsepower.

Mr. FROTHINGHAM. Yes, sir.

Mr. MILLER. Then it is very clear that there is a part of the time of the year that the United States Government will get nothing.

Mr. FROTHINGHAM. Yes, sir.

Mr. MILLER. Now, what portion of the year, have you figured out, will the United States get no horsepower and no power whatever under the Alabama Power Co. contract?

Mr. FROTHINGHAM. The 100,000 horsepower of secondary power; that is, the second 100,000 horsepower, is a matter, I think, Mr. Miller, of exact calculation. That calculation is based on the records of the stream flow of the river as kept by the United States Government over a long term of years.

Mr. MILLER. Yes.

Mr. FROTHINGHAM. And those records show in a definite way that that second 100,000 horsepower is available 82 per cent of the time.

Mr. MILLER. Eighty-two per cent.

Mr. FROTHINGHAM. Yes, sir.

Mr. MILLER. Now, there is 18 per cent of the year, then, when we get no horsepower whatever under the Alabama Power Co. contract; that is, approximately, one-fifth of the year.

Mr. FROTHINGHAM. Mr. Miller, when I say that when it comes to that amount of power, I have no knowledge of the matter one way or the other, other than what has been stated, and I understood that there had never been any statement to the effect that there was required to operate the nitrate plants for fertilizer more than the first 100,000 horsepower of secondary power. Now, that is a matter for somebody else to discuss and to pass upon, and not for me.

Mr. MILLER. I fully appreciate that, Mr. Frothingham, but you are appearing here and recommending the offer of the Alabama Power Co.

Mr. FROTHINGHAM. Yes.

Mr. MILLER. And with just this little fundamental questioning we have developed the fact that there is approximately one-fifth of the year when there will be no power available.

Mr. FROTHINGHAM. Yes, sir.

Mr. MILLER. Which is quite a factor in the manufacture of nitrates or in the manufacture of anything else that has to have a steady outflow.

Mr. FROTHINGHAM. Except, sir, that those who have been studying these questions, and the Government officials, as I understand, have said that the second 100,000 horsepower was all that was necessary for the proper operation of the plant. Now, if they are mistaken—

Mr. MILLER (interposing). That is, the Government engineers have said so?

Mr. FROTHINGHAM. Do not let me make any mistake about that. I had understood that the technical experts who had looked into the matter had stated that the second 100,000 horsepower was sufficient for the purpose. If it is not, that is a factor, sir, that I have nothing to do with. I am not passing on that.

Mr. MILLER. I will just correct you a little about that. The experts have advised us that the nitrate plant No. 2 has an annual capacity of 110,000 tons of ammonium nitrate and that means running the plant to its full capacity 12 months in the year. Now, not 82 per cent of the time or 75 per cent or any other fraction of time, but that is the maximum capacity of the plant, run to its full capacity.

I realize, Mr. Frothingham, the same, as I think all of us, that we are all interested in the facility of financial investment. It all leads to the stability of our financial institutions, but very clearly, from your point of view, in the interest of the Alabama Power Co., you do not think it advisable for a competitor to get in the field down there.

Mr. FROTHINGHAM. Not at all, Mr. Miller.

Mr. MILLER. You do not think it is advisable?

Mr. FROTHINGHAM. I do not think, if I may so put it, that from our point of view, as bankers who have handled the securities, the bonds of the Alabama Power Co., that it will make any difference to the Alabama Power Co. whether this proposition is handled in one way or another.

Mr. MILLER. It will not make any difference?

Mr. FROTHINGHAM. What I think with equal sincerity is, as an American citizen who has studied these question the country over, that the best interests of the public are served by putting that situation into the hands of the agency which is prepared and has demonstrated its ability to serve the public already. I am speaking in that respect in the public interest.

Mr. MILLER. Well, of course, if that philosophy is true, Mr. Frothingham, there is nothing in the philosophy of municipal or State enterprises, where municipalities develop their own water power and supply their own municipal needs.

Mr. FROTHINGHAM. My theory is based on the principle, Mr. Miller, that the greatest progress is made where private initiative is taken advantage of. That is simply my theory.

Mr. MILLER. I am quite familiar with that angle of it. I have been mixed up with it for a good many years and with all kinds of philosophies in that direction, but nevertheless if anyone should get this property besides the Alabama Power Co. it may be possible that there will be a competitor in the field down there, right in their territory, which you say would have no effect whatever on the securities of the Alabama Power Co.?

Mr. FROTHINGHAM. Pardon me, sir; I do not think I said that.

Mr. MILLER. I understood you to say that.

Mr. FROTHINGHAM. No; I said I did not think that the development of the Muscle Shoals situation by anyone other than the Alabama Power Co. would affect the Alabama Power Co. If there was somebody who went in in direct competition and some authority gave them permission to compete in every town and hamlet in which the Alabama Power Co. is doing business, there undoubtedly would be disturbance.

Mr. MILLER. Undoubtedly would be what?

Mr. FROTHINGHAM. Disturbance, but that is not a condition which I think it is fair to contemplate. There is in the State of Alabama a public-service commission, and it requires that a certificate of public convenience and necessity be secured before competition is allowed. That is a provision in the safety of the public, and I can not conceive, Mr. Miller, that the public would allow needless duplication of transmission lines, needless building of steam stations, needless duplication of expense, in order, deliberately, to injure an activity which has always been its good servant.

Mr. MILLER. Of course, that opens up another field. We are all acquainted with these certificates of necessity and these public utility corporations. Some of us have lived in States before they had them and after they have had them, and some of us have helped to organize them in some of the States.

Mr. FROTHINGHAM. I think better afterwards than before.

Mr. MILLER. Now, the Alabama Power Co. has a transmission line 88 miles long hooked up and lined up right toward one of the greatest consumers of electrical power in that whole locality, and that is the city of Birmingham.

Mr. FROTHINGHAM. Mr. Miller, the cost of distributing electricity after you have made it at the point of production is anywhere from two to three times the cost of generating it. Those things are all possible, surely, if anybody wishes, recklessly and improvidently to do something; but I am assuming that the Government will make its decision on what seems to me to be sound and helpful lines to the public it wishes to serve.

Mr. MILLER. The question is, What are sound and helpful lines? That has to be viewed from so many different angles.

Mr. FROTHINGHAM. That is it, precisely.

Mr. MILLER. I see very clearly, Mr. Frothingham, and so do you, and you saw it before I did, that if Mr. Ford's proposition should be accepted, and he should go in there and develop power and should sell his power, he would, in the first place, have an institution free from the financial government of the bankers; that is, his securities would never get on Wall Street or in Boston. He has enough money to put it in there himself. Now, suppose he goes to distributing power right in the same locality, granting that a certificate of necessity will be given by the State of Alabama, because we have had it before us that the Alabama Power Co. is a very unpopular institution in the State of Alabama, and so suppose that a certificate should be given him and he should enter into the distribution and sale of power in the very center now touched by the Alabama Power Co., we would have, first, an institution free from banker control of the large financial centers of the East; second, you would have a competitor right in the field competing against the securities you are interested in, and I can see very clearly why you would advocate that such a condition be not brought about, can not you?

Mr. FROTHINGHAM. Mr. Miller, I suppose that all sorts of things are possible.

Mr. MILLER. Let us figure on probabilities and not possibilities.

Mr. FROTHINGHAM. If Mr. Ford should go into that business, Mr. Ford would become a public utility.

Mr. MILLER. His company would.

Mr. FROTHINGHAM. And have to submit to the same regulation that the Alabama Power Co. does, and being a public utility Mr. Ford would have to go to the expenses in connection with such service, which he would be quite

unwilling in all probability to go to. Now, the Alabama Power Co. or any other power company is in the business of collecting and distributing power in the most economical and the cheapest way, and if Mr. Ford should develop this project and should have power for sale cheaper than the Alabama Power Co. in that respect would not be injured by the existence of that power developed by somebody else; but, on the contrary, Mr. Miller, if I do not gauge it wrongfully, the public would be greatly injured, because, instead of retaining the monopoly control which it has over the situation as it is to-day, it would deliberately create a monopoly control as against itself in the hands of a private owner beyond the reach of governmental regulation, and I think that would be very much the graver of the two evils to the public.

And, Mr. Miller, you have spoken about—is it proper for me to ask Mr. Miller a question? I do not want to if it is not.

The CHAIRMAN. Does Mr. Miller want to answer the question?

Mr. MILLER. I have no objection. I do not know, though, that it is very interesting to the discussion. I have been over this so many times with different power companies and bankers and everyone else I think I understand all the angles to it. I would not hesitate at all to go into a discussion with the gentleman, but I do not know that it would be very beneficial to my brethren on the committee.

Mr. FROTHINGHAM. I wanted to ask you this question. Mr. Miller referred to the banker control. Could Mr. Miller tell me, please, what is the nature of the banker control that either Harris, Forbes & Co. or Coffin & Burr exercise over the policies or the operations of the Alabama Power Co.?

Mr. MILLER. Oh, I have no knowledge of that, of course.

Mr. FROTHINGHAM. I can tell you.

Mr. MILLER. But you say you are interested in that firm and you are here—

Mr. FROTHINGHAM. I can tell you exactly, sir. The Alabama Power Co. wants to get money for its enterprises, and it comes and sits down with Harris, Forbes & Co. and Coffin & Burr and says, "We want to do so and so; can we get some money?" and we ask them questions and discuss the matter, and we say, "We can get the money for you; but, in our judgment, market conditions are such that it may cost you so and so much." The Alabama Power Co. buys that money in that way, in precisely the same way that it buys a 30,000-kilowatt generator or buys the copper for a transmission line, and buys that money where it can buy it cheapest and get the best service; and that, sir, is the complete extent to which either Harris, Forbes & Co. or Coffin & Burr exercise any banker control over the Alabama Power Co. or any other public utility whose bonds we have distributed.

Mr. MILLER. Then your firm is simply a distributor of bonds, and not investment bankers.

Mr. FROTHINGHAM. The terms, I think, are foolish terms, sir. We are called investment bankers. We simply buy bonds with our own money and own them, just as a dry-goods merchant does the cotton on his shelf, and then sell them.

Mr. MILLER. And you deal in securities to the point of purchasing and selling them.

Mr. FROTHINGHAM. We deal in securities in the way I mentioned only, not as brokers.

Mr. MILLER. You subscribe to issues of bonds, do you?

Mr. FROTHINGHAM. We purchase them outright if we are satisfied that it is a good loan. We handle only bonds. We do not handle the equity securities of companies.

Mr. PARKER. Mr. Frothingham, these two plants, nitrate No. 1 and nitrate No. 2, both include steam plants, do they not?

Mr. FROTHINGHAM. There has been a steam plant built by the Government at Muscle Shoals. I do not understand the expression "both include steam plants."

Mr. PARKER. Well, there is a steam plant at No. 2.

Mr. FROTHINGHAM. In that vicinity.

Mr. PARKER. With a capacity of 90,000 horsepower.

Mr. FROTHINGHAM. Eighty thousand horsepower, sir.

Mr. PARKER. Eighty thousand horsepower or 80,000 kilowatts.

Mr. FROTHINGHAM. Eighty thousand horsepower or 80,000 kilowatts.

Mr. PARKER. Is there another steam plant at nitrate No. 1, a few miles down the river?

Mr. FROTHINGHAM. I believe not, sir.

Mr. MARTIN. Yes; there is a small plant there.

Mr. FROTHINGHAM. I was not aware of it; pardon me.

Mr. PARKER. This proposition proposes to leave those nitrate plants with the Government but to take over and to take away from those plants their steam power, does it not?

Mr. FROTHINGHAM. I should not have put it in that way. I did not so understand it. The nitrate plants must have power to run them, and the Government wants to be sure it gets that power.

Mr. PARKER. Yes; and the Government had a reserve for the time when secondary power failed in these steam plants; and the steam plants, I understand, this proposition proposes that the Alabama Power Co. shall take over.

Mr. FROTHINGHAM. I believe so.

Mr. PARKER. So as to take away from the Government their reserve of power for the operation of those steam plants when the water power fails.

Mr. FROTHINGHAM. May I say, again, I do not want to evade any question in any way that I am competent to answer or know about, but I am not familiar with the details of the nitrate situation. All I know is that I have been informed by those who are supposed to know that the second 100,000 horsepower was what was needed.

Mr. PARKER. I had not asked about the nitrate situation. I have spoken of a plant or two plants, each of which when running might use continuous power.

Mr. FROTHINGHAM. The plant at nitrate No. 1, if that is the one, is not concerned in this proposition at all, as I understand it. That is left with the Government just where it is.

Mr. PARKER. So is nitrate plant No. 2.

Mr. FROTHINGHAM. I am talking about the steam plant that is at nitrate plant No. 1. That is not concerned in this proposition at all.

Mr. PARKER. There is not much of a steam plant there. You take the steam plant away from nitrate plant No. 2.

Mr. FROTHINGHAM. Yes; if you consider that the steam plant at nitrate No. 2 and nitrate No. 2 are one and inseparable.

Mr. PARKER. No; I do not so consider them.

Mr. FROTHINGHAM. It is taken away from it in the sense in which you speak of it; yes, sir.

Mr. PARKER. Do you know anything about how intimately that steam plant is connected with nitrate No. 2, whether it is inside of the Government grounds or inside the Government's buildings, and so on?

Mr. FROTHINGHAM. I have been there, but I can not tell you that. The plant is physically separate from the nitrate plant but is connected with it by cables for the transmission of current through some sort of semiunderground conduit passageway.

Mr. PARKER. Your previous contract with the Government for the building of transmission lines did not cover either these plants or the steam plants in them?

Mr. FROTHINGHAM. No; it did not, because, may I say—

Mr. PARKER (interposing). I did not want to know the reason, but if you would like to give it—

Mr. FROTHINGHAM. That is all; pardon me.

Mr. PARKER. I did not mean to interrupt you.

Mr. FROTHINGHAM. I do not want to more than answer the questions; excuse me.

Mr. PARKER. And that agreement covered improvements which were made on the lands of the Alabama Power Co. only?

Mr. FROTHINGHAM. You are speaking of the installation at the Gorgas plant?

Mr. PARKER. Yes; that is the only previous agreement.

Mr. FROTHINGHAM. Yes; I believe so.

Mr. PARKER. That included the transmission lines and the original plant—the Gorgas plant—and nothing else?

Mr. FROTHINGHAM. I understand it included the 30,000-kilowatt unit at Gorgas, the necessary substation apparatus in connection with it, and the transmission line north to the Muscle Shoals plant.

Mr. PARKER. It did not include, did it, the delivery stations or the substations or power stations which were put on the Government property at Muscle Shoals?

Mr. FROTHINGHAM. I can not answer that question. Mr. Martin tells me it did not, sir.

Mr. PARKER. So that this new contract proposes that the Government shall transfer and not merely carry out the contract of transferring to you the plant

and transmission lines on your own land, but likewise transfer other sections, delivery stations, and power stations on Government land.

Mr. FROTHINGHAM. As I had understood the proposition, sir, it was a proposition to acquire from the Government, for what was proper compensation, the rights to develop Muscle Shoals and its appurtenant property under a 50-year Federal water-power grant.

Mr. PARKER. I would like for the reporter to read the question.

(The reporter read the question referred to, as follows:)

"Mr. PARKER. So that this new contract proposes that the Government shall transfer and not merely carry out the contract of transferring to you the plant and transmission lines on your own land, but likewise transfer other stations, delivery stations, and power stations on Government land."

Mr. FROTHINGHAM. Yes.

Mr. PARKER. You do say that the Government had stations at which it could take power from the Gorgas plant or any part of the Alabama Power Co. for its own use in its own factories, and although it retains those factories it gives up those terminals?

Mr. FROTHINGHAM. Yes, sir; for 100,000 free horsepower.

Mr. PARKER. For 100,000 secondary horsepower, please?

Mr. FROTHINGHAM. Yes, sir; for the second 100,000 horsepower and \$5,000,000.

Mr. PARKER. This power becomes therefore entirely second, instead of being backed up by a reserve of steam power?

Mr. FROTHINGHAM. Under the proposition, as I understand it, sir, the offer is the second 100,000 horsepower which is available 82 per cent of the time, and which I have been led to understand was what was required to operate the plant.

Mr. PARKER. And for that the Government gives up its reserve of steam power which would have hatched out this secondary water power?

Mr. FROTHINGHAM. If you choose.

Mr. PARKER. Is not that what you understand?

Mr. FROTHINGHAM. Yes.

Mr. PARKER. I do not mean to confuse you, but I am trying to find out what the contract says.

Mr. FROTHINGHAM. Pardon me for putting it in that way. What I had in mind was that the power which the Government would have, if it retained entire possession of the steam plant to supplement the hydroelectric power and maintained it idle for 82 per cent of the time, it would have to pay money to generate, and if it wants to buy it instead from the Alabama Power Co., it is there in superabundance. So that it would make little difference in the cost to the Government whether it paid the operating expenses of its own station to make it or bought the power from the Alabama Power Co. It would, in fact, buy it cheaper.

Mr. PARKER. There is no contract in this proceeding to sell power to the Government?

Mr. FROTHINGHAM. Not as I understand it.

Mr. PARKER. No. No proposition that it should be sold at the lowest wholesale rate.

Mr. FROTHINGHAM. I should assume——

Mr. PARKER (Interposing). There is no such proposition in the contract. I asked a simple question. You did not see any such provision in there?

Mr. FROTHINGHAM. There is not, in the contract, but it is inherent, I think, sir, from the very nature of Government control.

Mr. PARKER. I doubt that, sir. I say there is no statement in that proposition that the Alabama Power Co. will reserve and be able to sell the Government enough power to make their secondary power primary power.

Mr. FROTHINGHAM. I recall no such statement.

Mr. PARKER. And that might be essential to the operation of the plants throughout the year.

Mr. FROTHINGHAM. No; I think not.

Mr. PARKER. That you do not speak of as an expert, you say?

Mr. FROTHINGHAM. Not as an expert; no, sir.

Mr. PARKER. You spoke of your general study of water power in the United States; how far has your study gone?

Mr. FROTHINGHAM. Coffin & Burr have handled bonds on hydroelectric properties all over the United States and in Canada.

Mr. PARKER. You spoke of the uncertainty of the Tennessee River and of other rivers of the Appalachian chain?

Mr. FROTHINGHAM. Yes.

Mr. PARKER. This uncertainty does not exist to the same extent as to Canadian rivers, does it, where the rivers come from snow mountains?

Mr. FROTHINGHAM. Not as a rule, because the Canadian rivers of the East, particularly, come from a very extended region of bogs and muskeags, where the water soaks in and is naturally collected and runs off more slowly.

Mr. PARKER. And they have a better flow throughout eastern Canada than we have here?

Mr. FROTHINGHAM. I think that is so, sir; a more regular flow.

Mr. PARKER. Now, going to the West, where they have a very large flow in some of their rivers.

Mr. FROTHINGHAM. In Canada?

Mr. PARKER. Yes.

Mr. FROTHINGHAM. Oh, yes; some are very powerful streams.

Mr. PARKER. And some are very much more powerful than this river?

Mr. FROTHINGHAM. Yes, sir.

Mr. PARKER. How much more powerful?

Mr. FROTHINGHAM. I do not know that I could say exactly.

Mr. PARKER. Twice as great, some of them?

Mr. FROTHINGHAM. Oh, yes; and more than that. The St. Lawrence, for instance, has one million and a half horsepower at one place.

Mr. PARKER. I was talking of such rivers as the Ottawa.

Mr. FROTHINGHAM. I suppose the Ottawa River at its mouth might develop, perhaps, 200,000 or 300,000 horsepower.

Mr. PARKER. That would run during the year and not be so uncertain during the summer.

Mr. FROTHINGHAM. Not so uncertain, but still uncertain.

Mr. PARKER. Now, when you get west of the Rockies, into the Sierras, where there are snow mountains, take the Columbia, for example, is not that very much larger and much more certain?

Mr. FROTHINGHAM. No; it is not, sir.

Mr. PARKER. It is not?

Mr. FROTHINGHAM. Did you say the Colorado?

Mr. PARKER. No; the Columbia.

Mr. FROTHINGHAM. The Columbia is a very much larger river. I am not familiar with the maximum variation in its flow, but it is considerable.

Mr. PARKER. Has it not a larger flow in the summer than in the winter?

Mr. FROTHINGHAM. That is because of the melting of the snow in the mountains.

Mr. PARKER. Well, has it a larger flow in the summer?

Mr. FROTHINGHAM. It has a larger flow later in the year than most rivers. I do not know that it is largest in the summer or the spring or the fall.

Mr. PARKER. My information is that instead of being short in the summer it is overfull in the summer.

Mr. FROTHINGHAM. The snows melt in the mountains of British Columbia in the summer time and that flow comes down to the United States at that season of the year, and it has a peculiar flow record in consequence of that.

Mr. PARKER. And it has millions of horsepower?

Mr. FROTHINGHAM. There is a great deal of horsepower on the Columbia River.

Mr. PARKER. Has it not millions of horsepower?

Mr. FROTHINGHAM. My impression is that at Priest Rapids, on the Columbia, the estimates show there might be some 300,000 continuous horsepower.

Mr. PARKER. At that single point?

Mr. FROTHINGHAM. At that point.

Mr. PARKER. And there are many others, are there not?

Mr. FROTHINGHAM. Not a great many, sir.

Mr. PARKER. Now, as to the Sierra, I understand that the streams running from the Sierras, the snow mountains of Colorado, are not very large, but they have a tremendous fall, so that the amount of horsepower in many cases is very large.

Mr. FROTHINGHAM. Yes.

Mr. PARKER. And they have a summer flow from the melting of the snow, just as you have indicated.

Mr. FROTHINGHAM. Yes.

Mr. PARKER. And some of them are much larger in their horsepower than the Tennessee because they have thousands of feet of fall, is not that true?

Mr. FROTHINGHAM. I think I would scarcely say that, sir. The streams in the California mountains are in themselves of comparatively little hydro-electric consequence unless they can be associated with storage reservoirs, which will retain these intermittent flows. Some of the situations in California are such that with those storage reservoirs developed and with collateral streams which normally would not flow into the main streams diverted through tunnels into it and one thing and another of that sort done there are large amounts of power that can be developed.

Mr. PARKER. Your answer then is that when they come from snow mountains they do not have a strong summer flow at the very time that you need them.

Mr. FROTHINGHAM. I did not mean to say that. The flow comes at the time when the snow melts, whenever that is, and there is very apt to be, and there is, of course, in those streams a summer flow larger than the winter flow. In those streams the minimum flow is in the winter when the cold comes and they freeze solid and there is no water.

Mr. PARKER. Have you studied the water powers of the world at all?

Mr. FROTHINGHAM. Only in a very general way, sir.

Mr. PARKER. I suppose you will agree with me that on the Western Continent the greatest water powers of the world are within the Tropics, on the tributaries of the Amazon, as they flow from the Andes.

Mr. FROTHINGHAM. There are some enormous power possibilities in the Tropics, both in South America and in Africa.

Mr. PARKER. And also in India?

Mr. FROTHINGHAM. I am not familiar with India. I could not say. There may be.

Mr. PARKER. Have you ever heard of the fall of the Indus River of about 10,000 feet in about 50 miles—a large river?

Mr. FROTHINGHAM. I have not heard of that, sir.

Mr. PARKER. Or of the fall of the Brahmaputra River of the same sort?

Mr. FROTHINGHAM. I have not heard of it.

Mr. PARKER. Or of the fall of the Yangtze River and other rivers of China coming also from those snow mountains?

Mr. FROTHINGHAM. Yes, sir; but those high falls are always where the river flow is small.

Mr. PARKER. Even when they come from those snow mountains?

Mr. FROTHINGHAM. Yes. Large fall and high heads do not often happen in nature together.

Mr. PARKER. Is that true where you have a large plateau like in Thibet, from which several large rivers flow?

Mr. FROTHINGHAM. Yes; but the individual rivers do not hold a large amount of water.

Mr. PARKER. You can not speak with certainty as to the amount of water in the Indus?

Mr. FROTHINGHAM. I could not answer as to that.

Mr. PARKER. You spoke of Africa. What part of Africa did you refer to?

Mr. FROTHINGHAM. I understand that on some of the inland streams there are some high heads.

Mr. PARKER. Do you mean in the south or in the north of Africa?

Mr. FROTHINGHAM. In central Africa.

Mr. PARKER. Where the Nile flows?

Mr. FROTHINGHAM. For instance from the Big Cataract to the Nile.

Mr. PARKER. Coming from the ruins along the Nile?

Mr. FROTHINGHAM. Coming from the interior plateau.

Mr. PARKER. What we used to call the Mountains of the Moon?

Mr. FROTHINGHAM. Very likely.

Mr. PARKER. In Switzerland and in Italy, especially perhaps in Italy, the streams that flow from the Alps into the Po have tremendous flows with tremendous water-power possibilities.

Mr. FROTHINGHAM. They have very large flows, but not such tremendous horsepowers. You take the Po River. It lies in the valley bottom all across the northern portion of Italy, and its tributaries come down from the mountain sides, and each tributary is a comparatively small one, and when it is coupled with a high head and the possibility of storage, then a considerable power can be developed.

Mr. PARKER. Have you heard of their plans and the millions of horsepower they expect there?

Mr. FROTHINGHAM. I have, in the aggregate, understood that it was a great deal.

Mr. PARKER. How much do they figure on?

Mr. FROTHINGHAM. I do not remember, sir.

Mr. PARKER. Many millions?

Mr. FROTHINGHAM. I do not remember, sir. It is very large.

Mr. PARKER. Then, I gather from you, if I am right, that while the Tennessee River is the best of our rivers in the Temperate Zone, in the eastern range of mountains, it is not large, compared with the rivers of the world, and is much more uncertain and smaller than the rivers either of Canada or the extreme West of the United States, and these are all smaller than the tremendous falls of the rivers of the Tropics.

Mr. FROTHINGHAM. In general, I should say so; yes, sir.

Mr. FIELDS. Mr. Frothingham, if I understood correctly your statement before noon, it is your contention or your belief that the power at Muscle Shoals will be necessary to meet the requirements of that section for the municipalities, factories, etc., which the Alabama Power Co. is now supplying.

Mr. FROTHINGHAM. I think I would say, Mr. Fields, that for several years to come the market requirements of Alabama can be taken care of without the use of the Tennessee River at all. It is simply a question of getting the Tennessee River harnessed as soon as market conditions make that a justifiable proposition in the public interest, and that time has come. In a few years it would in any case be demanded.

Mr. FIELDS. Would you apply the power produced at Muscle Shoals to the uses of the industries now supplied by the Alabama Power Co. entirely, to the exclusion of the production of fertilizer?

Mr. FROTHINGHAM. The Alabama Power Co. is an electric current making company. It does that business only, and it does not want to go into any other business, as I understand it.

Mr. FIELDS. Under your theory, there would be no water power in that section devoted to the production of fertilizer products, except the 100,000 secondary horsepower under the proposition of the Alabama Power Co., unless, perhaps, it is possible to successfully operate nitrate plant No. 2 with that power.

Mr. FROTHINGHAM. As the proposition stands at the moment, although, of course, should other development of the fertilizer business take place and additional power be required, I should be inclined to say that nowhere in the United States could it get more abundant or cheaper power than from a combination of these various resources which I have spoken of.

Mr. FIELDS. But you are making the production of fertilizer the secondary consideration and giving it secondary consideration. You would take care of everything first, and then, if there is power to produce fertilizer compounds, you would produce them, but you would not do so until all these other needs or requirements are supplied.

Mr. FROTHINGHAM. No; I think not, Mr. Fields. My thought was that the Government wanted to have this 100,000 secondary horsepower to operate the nitrate plants with, either for munition purposes or for the manufacture of fertilizer; and as I understand the proposition of the Alabama Power Co., it sets that aside as the primary claim of that business upon the capacity of the Muscle Shoals plant.

Mr. FIELDS. But, it being secondary power, that makes the production of fertilizer, when we come down to the meat in the coconut, a secondary proposition. The other is to be supplied first; and we make fertilizer, if we can do so, with secondary horsepower.

Mr. FROTHINGHAM. Perhaps my mind is confused about it, Mr. Fields, but I had understood—mind you, I have had no hand in working these phases out at all—but I have understood that what was wanted to operate that plant was the second 100,000 horsepower, and that that is being provided. Now, if that is not what is wanted, then, that is something which somebody else must take up and discuss.

Mr. FIELDS. This being the greatest water power in the Southeast and possibly the greatest one east of the Mississippi River in the United States, from my point of view, what is wanted is: First, the production of fertilizer compounds; and, then, if there is any available power, it might go to the other industries.

Mr. FROTHINGHAM. But, Mr. Fields, it is the greatest power in the Southeast only if it is coordinated with the other power and storage reservoir possibilities

in the vicinity. Otherwise, it is of comparatively little value. That is the point which I would like particularly to bring out. That alone, as a separate proposition, unconnected in any way it is a comparatively uninteresting proposition.

Mr. FIELDS. But properly harnessed it is the greatest?

Mr. FROTHINGHAM. Properly harnessed it is the greatest single point of power production that there is in eastern United States, with the exception of the Niagara River and the St. Lawrence River.

Mr. FIELDS. You have stated that your institution sells the securities of the Alabama Power Co., I believe?

Mr. FROTHINGHAM. Yes; sells its bonds, sir.

Mr. FIELDS. If the Government should accept the proposition of the Alabama Power Co., now before the committee, that company would doubtless sell a great many more bonds, would it not?

Mr. FROTHINGHAM. Probably.

Mr. FIELDS. And your firm doubtless would get its share of the business?

Mr. FROTHINGHAM. We should hope, Mr. Fields, that if that condition came about, that Mr. Martin would ask us if we could supply the money, and we should try to supply the money; and, if we could not, Mr. Martin would seek for it elsewhere. But we have told Mr. Martin that we believe that in the face of what he has told us of the growing markets and the business which is expected to absorb the initial output of this plant when it is completed, that we believe his proposition can be financed and that we could probably supply the money.

Mr. FIELDS. In view of the interest you have manifested in this company, and the very forceful presentation that you have made here in support of his offer, he would be very ungrateful if he did not give you the business, all other things being equal.

Mr. FROTHINGHAM. I confess I might feel that way.

Mr. FIELDS. That is all, Mr. Chairman.

Mr. FROTHINGHAM. But, Mr. Fields, we are in the business of handling public utility bonds in the United States and Canada, and there is a good deal of business that we would like to get that we do not get, and if we did not get the business here we would get some other business.

Mr. FIELDS. That reminds me to ask another question. You are not expecting to handle any bonds for the development of Muscle Shoals if Mr. Ford should get it?

Mr. FROTHINGHAM. I can imagine that if Mr. Ford should come to us and offer us the right securities, and want to borrow some money, we would lend him money as well as we would anybody else.

Mr. FIELDS. Yes; but you are hardly expecting him to come.

Mr. FROTHINGHAM. I am not anticipating that; no, sir.

Mr. WRIGHT. Mr. Frothingham, are you acquainted with the water-power situation in Georgia?

Mr. FROTHINGHAM. A while ago I was intimately acquainted with it, although I am a little rusty now.

Mr. WRIGHT. What are the principal rivers of Georgia?

Mr. FROTHINGHAM. The power-producing streams?

Mr. WRIGHT. The principal power-producing streams; yes.

Mr. FROTHINGHAM. The Chattahoochee, the river which flows down the middle of the State, the Flint River, I think, north of Macon; the Etowah River, and the Savannah, or the upper tributaries of the Savannah, namely, the Tallulah and the Tugaloo. I think those are the major power streams in Georgia.

Mr. WRIGHT. Now, can you tell us the amount of horsepower being produced on any of those streams?

Mr. FROTHINGHAM. Only very roughly. On the Tallulah River there is a 90,000-horsepower development, I think.

Mr. WRIGHT. At Tallulah Falls?

Mr. FROTHINGHAM. Yes, sir; operating under one of the highest heads in East.

Mr. WRIGHT. That is a very splendid development there, is it not?

Mr. FROTHINGHAM. It is a fine development. On the remaining stream, the Tugaloo, I believe they are starting a development which is to have something of the same horsepower.

Mr. WRIGHT. And that is being done by the same company?

Mr. FROTHINGHAM. By the same company. I should roughly say that on the upper reaches of the Etowah there might be forty to fifty thousand horsepower in two or three developments.

Mr. WRIGHT. The Etowah is a wonderful stream, so far as waterpower development is concerned, is it not?

Mr. FROTHINGHAM. It is a very interesting stream.

Mr. WRIGHT. Do you know of any river in the United States which has more natural dam sites and places for power development than the Etowah?

Mr. FROTHINGHAM. The topography of the country in northern Georgia does provide reservoir capacities of importance.

Mr. WRIGHT. Now, about the Chattahoochee; how many developments are there on the Chattahoochee?

Mr. FROTHINGHAM. I am afraid I do not remember. The Stone & Webster people have a development just above Columbus.

Mr. WRIGHT. That is at Goat Rock, is it not?

Mr. FROTHINGHAM. Yes; I do not remember how large it is. I suggest about twenty-five or thirty thousand horsepower, although I may be 100 per cent wrong about it.

Mr. WRIGHT. There are about three developments right at the city of Columbus, are there not?

Mr. FROTHINGHAM. I think there are several developments or that there can be several developments made there. I have never studied it myself.

Mr. WRIGHT. Then there is one at what is known as Bull Sluice near Atlanta, Ga., on the Chattahoochee.

Mr. FROTHINGHAM. Is Bull Sluice on the Chattahoochee or the Etowah?

Mr. WRIGHT. On the Chattahoochee.

Mr. FROTHINGHAM. Perhaps it is. I do not remember.

Mr. WRIGHT. That formerly furnished the current for the city of Atlanta and operated their street railway, etc.

Mr. FROTHINGHAM. I had been under the impression it was on the Etowah, perhaps it is on the Chattahoochee.

Mr. WRIGHT. Then up near Gainesville there are two or three developments on the Chattahoochee.

Mr. FROTHINGHAM. I do not remember the details of that, sir.

Mr. WRIGHT. Mr. Frothingham, the water-power development on the Chattahoochee is just in its infancy, is it not? The river has not been developed?

Mr. FROTHINGHAM. I do not know, Mr. Wright, what the possibilities of the Chattahoochee River are. I have never had occasion to study them in detail. I do know it is one of the streams which takes its source in the Allegheny range and so is a stream that has water enough to have water-power possibilities. The extent of them I do not know.

Mr. WRIGHT. Did you ever hear of the site at Franklin, Ga., on the Chattahoochee River?

Mr. FROTHINGHAM. No, sir.

Mr. WRIGHT. That produces 100,000 horse power.

Mr. FROTHINGHAM. I have never heard of that.

Mr. WRIGHT. The point I am making is that the power is not nearly all developed in Georgia on these power-producing streams.

Mr. FROTHINGHAM. It is not nearly all developed on any of the streams that flow from the Appalachian Mountains.

Mr. WRIGHT. In other words, it has just commenced.

Mr. FROTHINGHAM. It has just begun.

Mr. WRIGHT. Do you think, Mr. Frothingham, that in the next 1,000 years there will be any dearth of water power in the Southeast, even if Muscle Shoals was eliminated entirely?

Mr. FROTHINGHAM. My vision has not gone as far as that. I have been thinking in terms of the more immediate present.

Mr. WRIGHT. You do not want to impress the committee with the idea that unless this Muscle Shoals proposition is developed—I mean the hydroelectric power there on the Tennessee River, and coordinated and intertwined and interlinked with all the systems in the Southeast—that there is going to be a scarcity of electric current down there, do you?

Mr. FROTHINGHAM. Not in the immediate future, if the Federal Water Power Commission gives permits at other points.

Mr. WRIGHT. What you do mean to say is that the power at Muscle Shoals on the Tennessee River could be better utilized and the highest development could be reached provided it was coordinated with other systems throughout that section

Mr. FROTHINGHAM. Not that it can be better utilized, but that it can only be utilized to its maximum by such coordination.

Mr. WRIGHT. In other words, you figure that the maximum could not be utilized unless it was coordinated with these other systems.

Mr. FROTHINGHAM. Not with economy. The maximum could be utilized by building steam stations sufficient to provide all of the secondary power that was necessary to offset a shortage in the stream flow of the Tennessee River, but that is an expensive way of supplying that shortage if you can get it cheaper from hydroelectric sources, as you can, in that region.

Mr. WRIGHT. But the point I want to get at is that if you eliminate the Muscle Shoals proposition and concede for the moment that every kilowatt that can be produced there would be utilized in the manufacture of nitrates there would still be enough water power in the southeast to supply the demands, so far as any human vision can now foresee, would there not?

Mr. FROTHINGHAM. In my judgment, there is power there, under those circumstances, to last for a great many years; but this, I think, is the thought in that connection: That it does not mean that in every locality there will be an abundance of power. There may be a shortage of power for one reason or another. There may be a shortage of power in Mississippi, for instance, that can only be supplied in some particular way. I refer to aggregate markets and aggregate supplies. I should not have said "A great many years," as I did just now, but rather as a few moments ago I said to Mr. Fields. That for several years the capacities of Muscle Shoals could be dispensed with, if other permits were granted. But the markets in the Alabama territory are growing so fast that in a few years Muscle Shoals will have to be called on and must be available. The wise plan is to incorporate it now and add the other opportunities later.

Mr. WRIGHT. I have just one other question. You have made a very interesting statement here, Mr. Frothingham.

Mr. FROTHINGHAM. Thank you, sir.

Mr. WRIGHT. You have been asked about the flow and the fall of different rivers, do you anticipate that the fact that the country may be denuded of its forests will decrease the flow of the rivers in that section and lessen the power.

Mr. FROTHINGHAM. It is not likely, probably, to decrease the total water that in the course of a year runs through the river.

Mr. WRIGHT. I understand that, but I mean the average of the year.

Mr. FROTHINGHAM. Some people have said that the absence of forests leads to atmospheric changes which result in less precipitation. Whether that can be borne out by facts or not I do not know, but the denudation of the hill slopes does result in a faster run-off of the water that falls.

Mr. WRIGHT. That is the point I had in mind. There is nothing left to store it.

Mr. FROTHINGHAM (continuing). Whether it falls as water or whether it falls as snow. It means, correspondingly, that there must be proportionately larger storages to accomplish the same results.

Mr. WRIGHT. In other words, when you leave the lands covered with trees and brush and leaves and undergrowth, the water instead of flowing off rapidly from a rainfall is largely stored there and flows gradually, but if the land is denuded of brush or growth or leaves, it flows off immediately.

Mr. FROTHINGHAM. There is not room for argument on that. If one looks up a hill slope the bottom of which is an open field, the open field has lost its snow when there are still signs of the snow up above in the forests.

Mr. WRIGHT. And the reason that the stripping of the country of the forests might affect the water power would be because it would cause the water to all flow off at one time after a rain and not gradually flow off.

Mr. FROTHINGHAM. It would make the erratic flow of the Tennessee River still more erratic. That is the effect it would have. Since we are speaking of that, one reason why the Tennessee River has such an erratic flow is that its headwaters are in the Allegheny Mountains, which is the region of the highest precipitation in the United States, outside of the mountains in the extreme northwest of the United States on the Pacific coast, so that the rain falls in great quantities and falls suddenly, and runs off in a corresponding way.

Mr. WRIGHT. Mr. Frothingham, you have also gone into the very interesting field of monopolies. Of course, you are familiar with the old adage that competition is the life of trade.

Mr. FROTHINGHAM. Yes.

Mr. WRIGHT. We Americans have always believed in that, have we not?

Mr. FROTHINGHAM. Yes.

Mr. WRIGHT. Now, if you carried your theory into all the different avenues of business, would it not relate just the same to a merchant as to a man furnishing water power. Of course, I understand the difference that we speak of railroad and water-power companies as being public utilities. They are quasi-public institutions, but suppose you adopt the same plan about the supply of foodstuffs of the people of the United States and provide that we will cut the country up into zones and the Government will take control, and anybody who wants to enter the mercantile field can do so, but they must do so under regulations prescribed by the Government. Under that arrangement, it would be better to have just one institution in each zone, would it not, so that you would cut down the overhead?

Mr. FROTHINGHAM. I would scarcely think so, because you are now getting into the field of miscellaneous private production on more or less a small scale.

I was speaking of a business in which the power resources, hydroelectrically speaking, are limited and defined by nature, and are only so many and so large, no matter who handles them. I think the element of competition is not altogether absent, because if the Alabama Power Co. or any other company does not so conduct its business as to give the community that best service that the community wants, the community will give that license to serve it to somebody else. So that the Alabama Power Co. has to bring to bear its individual initiative to hold its position; if it does not, it loses its chance.

Mr. WRIGHT. Your idea is that the public really controls these things?

Mr. FROTHINGHAM. Absolutely, sir.

Mr. WRIGHT. In the first place the commission controls the issue of stocks and bonds?

Mr. FROTHINGHAM. Yes, sir.

Mr. WRIGHT. And then it fixes the rates?

Mr. FROTHINGHAM. Yes; but that control of stocks and bonds is relatively immaterial. It is relatively immaterial how many stocks and bonds are outstanding on the property, from the point of view of public interest in it.

Mr. WRIGHT. It would have something to do with the investment, would it not?

Mr. FROTHINGHAM. No; it would have nothing to do with the investment, and it would have nothing to do, I think, with the rate of return on the investment, which the public would allow on the investment that is used in the public service.

Mr. WRIGHT. Why do you think it is wisdom; or is it wisdom, for the law to require that the issue of stocks and bonds shall be first determined by these commissions?

Mr. FROTHINGHAM. I think that may have grown up largely because before there was public regulation there were flagrantly large issues of public-service securities.

Mr. WRIGHT. They wanted to have the income on capitalization as expressed by stocks and bonds.

Mr. FROTHINGHAM. And also in the hope that they could put valuation in those excessive capitalizations. It is desirable, other things being equal, that there shall be a proper adjustment, and that the valuation on a property shall bear some close relation to the securities outstanding against it; but the point is that it does not make any difference to the public, because the public says, after examination that this concern serving the public can make such and such a return on the money which it actually uses in the public service.

Mr. WRIGHT. Do you think the public would fare better when there was just a threat of competition or when competition actually existed?

Mr. FROTHINGHAM. I think actual competition in these services is altogether to the disadvantage of the public.

Mr. WRIGHT. You think you would rather have the threat of competition?

Mr. FROTHINGHAM. I know that Mr. Miller, and very likely some other gentlemen, feel that I am speaking entirely from the standpoint of my special business, and my special desire to make a profit in it; but I have studied these problems for a long time as intelligently as I could, and looking at them from a public point of view, I am sincerely interested that the best public service shall be performed, and from that point of view alone it makes no difference to me whether a private concern or a public concern does the business; but I am sincerely convinced of the fact that as our institutions are run in this country,

the privately managed concern, under regulation, secures through private initiative and close application to the problems involved, results that can not be gotten in any other way. Therefore I hold it is to the advantage of the public to have these concerns run in that manner.

Mr. WRIGHT. Do you not think that with competition there would be more of initiative and that the public would get the benefit?

Mr. FROTHINGHAM. Competition in this business is destructive, just as I pointed out this morning in the case of La Crosse, Wis. It multiplies investment needlessly and the cost has to be absorbed by the community in some way or other, whether it knows it and realizes it or not.

Mr. WRIGHT. Your idea is that it might be better to have one great central company to control the water power of every State, or, in all events, one central company in each section.

Mr. FROTHINGHAM. I should say there should be one in each section. There is such a thing as getting a business too large. Human capacity can best work within limits. Take, for instance, the American Woolen Co. The American Woolen Co. has grown to an enormous size and does a splendid business. But such size has its own limitations. No one man can in detail run all its mills. What happens is that the little independent woolen mill located up in Maine, or somewhere else, where individual application is at its best, can keep on running in competition with the American Woolen Co.

You want a unit so large that it will accomplish the economies you are after and still be within the comprehensive control of a single agency. When you get beyond that point you lose in efficiency. It is better not to have everything in one basket, but to have a basket large enough to accomplish the results desired. I think a basket large enough to hold the power possibilities I have mentioned in Alabama, where the problems are those of the coordination of similar resources sufficiently close together in distance, sufficiently tied together with regard to all the problems involved, one central agency, can do the work and accomplish the result better than scattered agencies. If you have scattered agencies you have to have intercorporate relationships. You may have a property and I may have a property, and you may want to buy current from me. We have to make a contract, and in the making of that contract we are going to stipulate certain things. You are going to demand conditions that you think will be of advantage to you, and I am going to stipulate certain conditions that I think will be of advantage to me. I am going to interpret that contract in my favor, and you are going to interpret it in your favor. That means that you can not get through such an arrangement the simplicity and the unity of control and use of the two facilities that you can get if one of us is running the whole thing. Do I make my point clear?

Mr. WRIGHT. Oh, yes. Let me give you an illustration along that line. Let us say that we live in a small town and there are two banks in that town, and the rate of interest is regulated by law. Anything charged over and above a certain rate is usury and is noncollectible. Each bank has a president and board of directors, and a certain number of employees, including a cashier and two or three bookkeepers.

Mr. FROTHINGHAM. But I am not a banker.

Mr. WRIGHT. But I want to give you this illustration. The heads of these banks and the stockholders determine that it will be more economical to merge the two banks, and that they could run one bank at practically the same expense at which they are running the two. They find that they could cut off all the overhead and other expenses of one of those banks, and that thereby they could make a great saving. Do you think it would be better for that merger to take place, so far as the public who deal with the banks is concerned, or should they stay in competition, with the increase in the cost incident to operating the two banks instead of one.

Mr. FROTHINGHAM. That depends, I should say, on conditions. I am not a banker, and I am not a student in the intricacies. But I should say that money is such an exceedingly liquid commodity in its flowing here, there, and everywhere that complete consolidation in a given community would be against the interests of that community.

Mr. WRIGHT. Although the rate is regulated by law?

Mr. FROTHINGHAM. I should say that was something that could not be regulated by law, sir.

Mr. WRIGHT. So there is something in competition, is there not, that pervades the whole of life?

Mr. FROTHINGHAM. I thought I have said there was; I think, indeed, there is.

Mr. WRIGHT. Finally, Mr. Frothingham, the consumer pays, does he not?

Mr. FROTHINGHAM. The consumer pays.

Mr. WRIGHT. If you maintain two transmission lines when one would do the work, the public pays for it?

Mr. FROTHINGHAM. Yes.

Mr. WRIGHT. That is true, in everything, is it not?

Mr. FROTHINGHAM. Yes, sir; and for that reason you want to keep the investment serving the public at the minimum, so that the consumer will pay as little as possible.

Mr. STOLL. Have you read all three of the contracts before this committee?

Mr. FROTHINGHAM. I have read two of them, the Ford proposition and the Alabama Power Co. proposition; I have not read the other.

Mr. STOLL. You think the Alabama Power Co. contract is the better contract?

Mr. FROTHINGHAM. Unquestionably.

Mr. STOLL. You look at that offer, Mr. Frothingham, from the standpoint of the development of the electrical power solely, do you not?

Mr. FROTHINGHAM. From the standpoint of putting the capacities of the Tennessee River to the greatest possible use in the interest of all the public within the reach of that power.

Mr. STOLL. Have you taken into consideration the fact that the development of Muscle Shoals was started by the Government primarily to make nitrates for munitions and to make fertilizer for the farmers?

Mr. FROTHINGHAM. I think so.

Mr. STALL. Have you taken that into consideration?

Mr. FROTHINGHAM. I meant this morning to point out why I thought the Alabama Power Co.'s proposition met that desire on the part of the Government.

Mr. STOLL. They do not undertake to operate those plants?

Mr. FROTHINGHAM. No.

Mr. STOLL. We would be taking two bites at the cherry, would we not, getting the power from the Alabama Power Co. and then would have to let other contracts to make nitrates for munitions or for fertilizers?

Mr. FROTHINGHAM. I think in taking two bites at the cherry, both cherries will taste a great deal better.

Mr. STOLL. We will have to go through the whole thing of developing the making of nitrates, or make different contracts with other parties.

Mr. FROTHINGHAM. I have a feeling, based not on anything I know, but based on experience, that if there is a demand for the manufacture of nitrates, with a situation as clean as a whistle, as it would be for an independent concern, expert in that business, to lease a plant from the Government and have 100,000 horsepower of free power, and with, therefore, a minimum demand for new capital that people would come forward to do that business, and if they did that business, and that business only, you would get more and better fertilizer made than you could get made in any other way.

Mr. McKENZIE. I think we all understand that the Alabama Power Co. owned, or controlled, at least, the site of Dam No. 2 prior to the enactment of section 124 of the national defense act in 1916.

Mr. FROTHINGHAM. I understand so.

Mr. McKENZIE. Had the Alabama Power Co., prior to that time, ever undertaken to interest your firm in the financing of that project?

Mr. FROTHINGHAM. Never, because it was premature. We have discussed the situation many times.

Mr. McKENZIE. Since the enactment of that legislation, has there been any attempt on the part of the Alabama Power Co. to have you float its bonds?

Mr. FROTHINGHAM. The Alabama Power Co. has talked with us about it a good many times, and a matter of as recently as the middle of last year, or somewhat earlier, the money market was in such a condition and the rates were such that it was absolutely impossible to raise the necessary funds to put this project through as a private matter. But since that time conditions have so changed that that is no longer true, and it becomes possible to dispose of those securities.

Mr. McKENZIE. After listening to your statement, in which I was very much interested, because I think you have enunciated some very sound principles, I have been wondering whether or not it is your belief, as a financier, a man engaged in financing various projects, that, standing alone, without being con-

nected up in any way with activities in that region, the financing of the Muscle Shoals project would be one on which you would not look with favor.

Mr. FROTHINGHAM. Absolutely.

Mr. MCKENZIE. Do you give that opinion to the committee as your firm and fixed judgment, after careful consideration?

Mr. FROTHINGHAM. As a proposition of financing the Muscle Shoals dam as an independent situation would be entirely uninteresting to us.

Mr. MCKENZIE. Then would you agree to this proposition, that it can only be handled in one of three ways: First, to have the Government go ahead and construct the dams and then lease to someone; second, to permit some man or some corporation with sufficient funds in bank, such as it is alleged Mr. Ford has, to go ahead and complete the project; or third, to enter into a contract with the Alabama Power Co., or some other going concern in that locality, with which this project could be hooked up, and all operated together.

Mr. FROTHINGHAM. I think those are the three alternatives; yes, sir.

Mr. MCKENZIE. Of course, you stand for the proposition of the Alabama Power Co. as being the most feasible and best for the Government?

Mr. FROTHINGHAM. For the reasons I have indicated.

Mr. MCKENZIE. And for the serving of the general public?

Mr. FROTHINGHAM. Yes, sir.

Mr. MCKENZIE. If there are no further questions, we are very much obliged to you, Mr. Frothingham, and the committee will stand adjourned until 10.30 o'clock to-morrow morning, when we expect to hear Mr. Mayo again.

Mr. FROTHINGHAM. Mr. Martin calls my attention to the fact that Mr. Thurlow, the engineer for the Alabama Power Co., thinks that in a very few years these southern powers will be exhausted, and his judgment on that matter would be better than mine.

(Thereupon, the committee adjourned to meet to-morrow, Tuesday, March 7, 1922, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Tuesday, March 7, 1922.

The committee met at 10.30 o'clock a. m., Hon. Julius Kahn (chairman) presiding.

The CHAIRMAN. Gentlemen, I have before me a letter from Mr. Hammitt, vice president of the Air Nitrates Corporation, in which he answers quite a number of questions that were asked him when he was on the stand. He stated at the time that he did not know but that he would look over the records and try to give us the information. I believe he has tried to do that; and if there is no objection we will put the letter in the hearings.

(The letter referred to follows:)

AIR NITRATES CORPORATION,
New York, March 2, 1922.

Hon. JULIUS KAHN,
*Chairman Committee on Military Affairs,
House Office Building, Washington, D. C.*

DEAR SIR: At the hearings before your committee on February 20 and February 21 I was asked to supply for the record certain information that I did not have available at the time. The purpose of this letter is to supply the desired information.

1. In the course of questioning regarding the relations of the Virginia-Carolina Chemical Co. and the American Cyanamid Co., I was asked for a statement of the men in the American Cyanamid Co. who own stock in the Virginia-Carolina Chemical Co. and the amount of stock owned by each. As I promised at the hearing, I have made inquiries of the executive officers and directors of the American Cyanamid Co. and have been informed that no one of them owns any stock in the Virginia-Carolina Chemical Co. except Mr. S. D. Grenshaw, who owns 10 shares. In this connection it is fair to state that the relations between the two companies are better shown by my testimony that the Virginia-Carolina Chemical Co. owns approximately 26 per cent of the stock of the American Cyanamid Co.

2. I was asked to supply for the record the date when Mr. Charles E. Hughes was retained by the American Cyanamid Co. to advise on questions relating to the form of protection that could be given the American Cyanamid Co. in connection with United States nitrate plant No. 2. This date was on or about May 15, 1918.

3. I was asked to supply the committee with a statement regarding the conduct of negotiations between American Cyanamid Co. (and its subsidiary, Air Nitrates Corporation) and the Government so that the committee might be advised as to who conducted those negotiations on both sides. On behalf of the American Cyanamid Co. and the Air Nitrates Corporation, these negotiations were conducted by Mr. Frank S. Washburn, president of both companies. On behalf of the Government they were conducted first by Brig. Gen. William Crozier, as Chief of Ordnance, and afterwards by his successor, Maj. Gen. C. C. Williams. Many conferences were held during the course of the negotiations, but no attempt was made to keep a complete record of these conferences. The contract of November 16, 1917, was negotiated for the Government by General Crozier and signed by Col. J. W. Jones. The contract of June 8, 1918, was negotiated for the Government by General Williams and signed by Col. Samuel McRoberts. Mr. Washburn and Mr. C. M. Grant signed the contract of November 16, 1917, in behalf of Air Nitrates Corporation, and the contract of June 8, 1918, was signed in behalf of Air Nitrates Corporation by Mr. Washburn and Mr. A. E. Bonn.

4. I was asked to verify for your record the list of employees of Air Nitrates Corporation who received compensation of more than \$5,000 per year. As such list is published at page 3065 of the hearings before Subcommittee No. 5 of the Select Committee on Expenditures in the War Department of the House of Representatives, Sixty-sixth Congress, second session, volume 3, serial 6, parts 50 to 59 and 64 to 66, I find this list is correct.

5. I was requested to supply for your record the correct date and exact language of the statute referred to in article 21 of the contract of the Government with the Air Nitrates Corporation, dated June 8, 1918. This statute was by misprint referred to in copies of the contract before your committee as "Section 116 of the act of Congress approved March 4, 1919." The statute referred to was approved March 4, 1909, and the section referred to is as follows:

"SEC. 116. (Contracts to which two preceding sections do not apply). Nothing contained in the two preceding sections shall extend, or be construed to extend, to any contract or agreement made or entered into or accepted by any incorporated company where such contract or agreement is made for the general benefit of such incorporation or company; nor to the purchase or sale of bills of exchange or other property by any Member of or Delegate to Congress, or Resident Commissioner, where the same are ready for delivery and payment thereof is made at the time of making or entering into the contract or agreement." (35 Stat. L., 1109.)

The two preceding sections referred to in section 116 as quoted above are as follows:

"SEC. 114. (Member of Congress not to be interested in contract.) Whoever, being elected or appointed a Member of or Delegate to Congress, or a Resident Commissioner, shall, after his election or appointment, and either before or after he has qualified, and during his continuance in office, directly or indirectly, himself, or by any other person in trust for him, or for his use or benefit, or on his account, undertake, execute, hold, or enjoy in whole or in part any contract or agreement, made or entered into in behalf of the United States by any officer or person authorized to make contracts on its behalf, shall be fined not more than \$3,000. All contracts or agreements made in violation of this section shall be void; and whenever any sum of money is advanced by the United States in consideration of any such contract or agreement it shall forthwith be repaid; and in case of failure or refusal to pay the same when demanded by the proper officer of the department under whose authority such contract or agreement shall have been made or entered into, suit shall at once be brought against the person so failing or refusing and his sureties for the recovery of the money so advanced. (35 Stat. L., 1109.)

"SEC. 115. (Officer making contracts with Member of Congress.) Whoever being an officer of the United States shall, on behalf of the United States, directly or indirectly make or enter into any contract, bargain, or agreement, in writing or otherwise, with any Member of or Delegate to Congress, or any Resident Commissioner, after his election or appointment as such Member, Delegate, or Resident Commissioner, and either before or after he has qualified, and during his continuance in office, shall be fined not more than \$3,000." (35 Stat. L., 1109.)

Respectfully, yours,

J. O. HAMMITT,
Vice President.

The CHAIRMAN. This morning we have with us the representative of Mr. Ford, and we will be very glad to hear him.

ADDITIONAL STATEMENT OF MR. WILLIAM B. MAYO, CHIEF ENGINEER OF THE FORD MOTOR CO., DETROIT, MICH.

The CHAIRMAN. Mr. Mayo, will you kindly state to the committee any further communication that you may want to disclose to us.

Mr. MAYO. When I left here before, I stated that we would make a few alterations in the wording to clarify the meaning of our offer.

The first one that appears is in regard to the capital stock, in paragraph 1, line 2, after the parenthetical expression "hereinafter referred to as the company," we will insert "with a paid capital stock of not less than \$10,000,000."

Mr. MILLER. Where does that come in?

Mr. MAYO. Right after the parenthesis. It comes after the word "company" in the second line of paragraph 1.

Mr. MILLER. Not less than \$10,000,000?

Mr. MAYO. Yes; not less than \$10,000,000.

Mr. HILL. What will be the exact wording of that change?

Mr. MAYO. With a paid capital stock of not less than \$10,000,000.

Then in paragraph 14, line 2, there was considerable question, if you remember, in regard to the word "compounds," which appears after "fertilizer." We are striking out the word "compounds" and inserting before the word "fertilizer" the word "commercial," and we add the letter "s" to the word "fertilizer." It is in the singular and we make it plural. It will then read, "The company agrees to operate Nitrate Plant No. 2 at the approximate present annual capacity of its machinery and equipment in the production of nitrogen and other commercial fertilizers."

I believe the farm organizations are here with some requests as to changes, and we have had some talk with them.

Mr. QUIN. It occurs to me, Mr. Chairman, it would be a good idea to let these two gentlemen agree as to what changes they want to make without putting Mr. Silver on the stand, and let Mr. Mayo state them.

Mr. MCKENZIE. Are there any further suggestions you want to make outside of the one involved with the farm organizations?

Mr. MAYO. I do not think so.

Mr. MCKENZIE. If not, it might be well to permit the members to ask you such questions as they may feel disposed to ask you at this time in connection with the statement you have now made.

Mr. MAYO. All right, sir.

Mr. MCKENZIE. And having that in mind, I will ask Mr. Greene first if he desires to ask any questions.

Mr. GREENE. Mr. Mayo, have you given any further thought to the life of this proposed lease, a century period, whether Mr. Ford would be willing to come down to 50 years?

Mr. MAYO. He would not.

Mr. GREENE. Does he stand absolutely pat on the 100-year proposition?

Mr. MAYO. It seems so; yes, sir.

Mr. GREENE. Suppose we bring this proposition of yours out on the floor, and our colleagues ask us, "Why do you give Mr. Ford 100 years under the peculiar conditions attending his proposition, and yet everybody else operating a public waterfall under the law must subscribe to the period mentioned in the water power act of 50 years?"

Mr. MAYO. The answer is, it seems to me, that they all do not operate under a 50-year period.

Mr. GREENE. All that get Federal power do.

Mr. MAYO. Yes; but this we do not consider under the Federal power act.

Mr. GREENE. Why not? Because you are substituting your contract for it?

Mr. MAYO. Yes, sir.

Mr. GREENE. And I ask why should you have that advantage over your fellow citizens, under the law?

Mr. MAYO. We do not ask for any advantage. Mr. Ford has made an offer, and that is it.

Mr. GREENE. And it sets you up distinctly as a class who will occupy this relationship to the Government so that you will have a contract which will run for 100 years to utilize certain power, whereas other men utilizing Federal power are only permitted to contract for 50 years, and then only under certain terms and conditions, because they are restricted in the use of the power even at that.

Mr. MAYO. If I may suggest, this is in a different category, it seems to me. This is a combination of a water power and an industrial plant.

Mr. GREENE. In other words, you are going to plead here a public policy in the name of Mr. Ford which shall only apply to those having this lease and provides that the same possibilities shall not be open to other citizens of the land.

Mr. MAYO. This same proposition is open to anybody, it seems to me.

Mr. GREENE. Yes; if they get Muscle Shoals before you do.

Mr. MAYO. There is only one Muscle Shoals and only one project of its kind.

Mr. GREENE. I realized when I started my questioning that I could not get you to go back on your own proposition, so there is not any use to press that any further.

Mr. MAYO. Of course, the point at issue is that we consider the investment too large to take the risk for a 50-year period.

Mr. GREENE. I know that, but you are simply inviting not only class legislation but individual legislation, which sets your folks apart entirely from the rest of the people, under the law.

Mr. MAYO. I do not think so, because this is entirely a different kind of project from a straight water-power project. It is a combination of many things.

Mr. GREENE. It is a question perhaps of the difference between tweedledee and tweedledum, because it all implies water power, and the principle involved in the water power act was the conservation and use, under governmental regulation, of water power. They might make woolen underwear or they might make Christmas toys, it was the water power that was the gist of the thing, and what shall be done with the public water power, who shall have it, under what terms, and for how long. Now, everybody else has to come in under the 50-year period except you.

Mr. MAYO. Everybody else is treating it more as a water-power project, I guess.

Mr. GREENE. That is what this is.

Mr. MAYO. I do not think so. I think it is a combination of the two. The investment in the industrial plant will greatly exceed that in the water power.

Mr. GREENE. If it were not a water-power project, then the position of Muscle Shoals would not be the particular crux of the whole matter.

Mr. MAYO. If the water power did not exist no project such as we have in mind could be carried out at all.

Mr. GREENE. Exactly. Now, it is a question of the regulation of water power and no amount of shading the meaning of words can change that, and so far as the Government is concerned the issue is, How shall we dispose of some water power, under what terms, to whom, under what regulation as to use, and we are met on the floor with the suggestion, "Everybody else, Uncle Sam, that you let have water power is tied right down to 50 years, and is under the regulation of the public service commission as provided for in this law, yet you propose to let Mr. Henry Ford have a water power for twice that period and under terms far more advantageous." What do you suppose other people are going to say about that?

Mr. MAYO. You are confining yourself, it seems to me, entirely to the water power.

Mr. GREENE. Because that is the basis of this contract.

Mr. MAYO. I do not think wholly so.

Mr. GREENE. If it was not, then you would not want to make the proposition.

Mr. MAYO. While that may be true, yet it is not wholly so, because if the nitrate plant and the war emergency plant were not there I doubt if Mr. Ford would have made the offer as it now stands because the nitrate plant really is a part of the prime object.

Mr. GREENE. But they are run by water power.

Mr. MAYO. Exactly; but you are not treating the water power alone, because the other is hooked on to it.

Mr. GREENE. Of course, as we all know, you can fix up a little alcohol so it is not called alcohol when they sell it, but it turns out to be alcohol when you drink it.

The CHAIRMAN. If you will permit me, Mr. Greene, I think at one of the hearings, when you were not present, there was evidence brought in to the effect that the Keokuk, Iowa, plant has a perpetual right.

Mr. GREENE. That was before the Federal water power act was passed.

Mr. MAYO. Hales Bar, on the Tennessee River, is for 99 years.

Mr. GREENE. But those other things were before the water power act was passed, as I recall.

Mr. MAYO. I think you are correct about that.

Mr. GREENE. We are talking about the law as it is now. Of course, I realize, as I have said, that there is no use wearying the committee with my importunities, because the man who proposes the contract can not be made to go back on his own offer. I understand that and I will not weary you any longer. I would like to again ask you if you have any construction to put upon that final proposition in your offer that reserves the right to use the power to the heirs and assigns of your corporation forever. Does that mean just exactly what it has been interpreted to mean here, that no matter what disposition the Government itself makes of that property, there still goes with it the right upon the part of your people forever to the first use of that power on terms to be agreed upon, and, of course, the terms may be enforced one way or the other; do you understand that gives you a right in perpetuum to that power?

Mr. MAYO. It gives us the preferential right at the same price you can get from anyone else. We do not have any advantage over anybody else in price or terms.

Mr. GREENE. No; the only advantage that amounts to anything is that you have the power.

Mr. MAYO. Yes, sir.

Mr. GREENE. And nobody else can take it away from you.

Mr. MAYO. Apparently.

Mr. GREENE. Now, what is your judgment, as a citizen, Mr. Mayo, as to the public policy involved in the United States Government giving any living creature the right to use this power in perpetuum, basing the contract on present-day conditions and the contract to run to our children's children and for all the generations hence?

Mr. MAYO. We think, under the conditions of this contract, we should have that preference. I do not know that that should apply to every kind of a contract. We have kept the war emergency plant in order for 100 years and we have invested a great deal of money, and any change in that that would so fix it that it is not possible to take the power right from under our feet would be agreeable, but we can not be left with a very large investment there and with no power; that is the point.

Mr. GREENE. It is very obvious that if Mr. Ford is as successful with this enterprise as he has been with others that at the end of 100 years the original investment at Muscle Shoals will have been returned more than once and nobody then owning the property or the lease would have ventured a dollar into it. They will simply be heirs to the thrift of the century before. They will wake up to find themselves owning something. Do you think it is altogether consistent with a proper public policy that looks to the future in the disposition of the Government's property and rights that we should mortgage our children's children's children to this proposition to-day when we have not the faintest idea what conditions will confront them, socially or economically?

Mr. MAYO. I do not see that you are mortgaging it in any way, because, after all, Mr. Ford has got to pay the same rate that anybody else would pay.

Mr. GREENE. But there is no competition if he does that. In other words, the proposition all runs against the Government and in favor of your people. In other words, the Government, again, can not choose its customer. The Government has something, but it can not choose the customer for it, because the very instant that you pay the price that the Government asks, as you will, nobody else who offers to pay the same price can have the property. You leave the Government in a peculiar situation. It may be that 100 years from now what your folks are making is by no means as desirable in the public interest as something which somebody else comes in with a tender to make, but Uncle Sam has to throw his hands up and say, "A hundred years ago they bound me to sell this power to these people, no matter what they made."

Mr. MAYO. I think Congress has the right to take it away at any time.

Mr. GREENE. It has the right to break faith, if you call it a right, but you do not urge that upon the Government as the only way out of what it finds to be a bad bargain when it went into that bargain with its eyes open.

Mr. MAYO. I think at the end of the contract period the Government will be able to get just as much out of that power as though it was a wide-open proposition and without a preference in the contract.

Mr. GREENE. It is not a question of money; it is a question of principle. We are not interested in the mere makeshift that might obtain in a bargain. We are charged with the custody of public property and we are interested in

the principle of government as a matter of public interest and public policy, as to what shall be done with it.

Mr. MAYO. Strictly, under the letter of the contract, we have a preferred right to negotiate upon such terms as may be agreed upon.

Mr. GREENE. But read the next sentence: "If the said leases are not renewed or the property covered thereby is not sold to said company, its successors, or assigns, any operation or disposal thereof shall not deprive the company, its successors, or assigns of the right to be supplied with electric power at reasonable rates and in amounts equal to its needs, but not in excess of the average amount used by it annually during the previous 10 years."

That means something in English and it is plain enough on the face of it.

Mr. QUIN, Mr. Chairman, it occurs to me that this gentleman has declined to change that part of the offer, and we went over all that in the direct examination.

The CHAIRMAN. Of course, the statement that Mr. Quin makes, that we have gone into this thing on direct examination, is true, and if the witness is not prepared to make any alteration in that language, that is a matter for the committee to consider when the whole thing is taken up in executive session.

Mr. MAYO. What would happen at the end of the lease if you made a new contract on this wording: "Terms then to be agreed upon"? Say for argument's sake you made a contract for a year, at the end of the year where would you be?

Mr. GREENE. Mr. Mayo, you know that article 17 is divided into two sentences: The first one tells what you may do by way of negotiation, and the second one says that no matter what is done, however, this one particular thing, the right of your company to power, shall not be disturbed.

Mr. MAYO. But that is at the end—

Mr. GREENE. There are two propositions involved there.

Mr. MAYO. That is at the end of the period only, it seems to me, and then you have the right, so far as I can see, to furnish the plant with power from any source. You do not have to supply it from that particular source.

Mr. GREENE. That does not change the principle of the thing. That is only a change of the source from which the power might come.

Mr. MAYO. That is true.

Mr. GREENE. And it is binding and obligatory on the United States Government always to furnish the power.

Mr. MAYO. I am not a lawyer, but I am not sure you are right. It seems to me that at the end of the period you have the opportunity to make a new contract on terms to be agreed upon. There is no length of time stated for that contract.

Mr. GREENE. What, then do you mean by language that is as explicit and specific as this: "If the said leases are not renewed or the property covered thereby is not sold to said company, its successors or assigns, any operation or disposal thereof—it does not make any difference what it is—shall not deprive the company, its successors or assigns, of the right to be supplied with electric power," etc.

Mr. MAYO. I know; but what are you talking about at all times?

Mr. GREENE. I am just talking about this language in the proposal.

Mr. MAYO. But you are talking about the end of the period.

Mr. GREENE. Yes; the end of the 100 years.

Mr. MAYO. Then, suppose you make another shorttime contract at that time, when that one would lapse, where would you be?

Mr. GREENE. This says that at the end of the period, no matter what other negotiations Uncle Sam proposes to enter into with respect to the disposal of this property, there is one thing he can not dispose of, or become free of, and that is the right of your people to that power.

Mr. MAYO. Yes; but saying that you make a new contract for another 10 years and then at the expiration of that 10 years, what?

Mr. GREENE. Unless your people surrender that right you can not make a new contract that will deny that right.

Mr. MAYO. But say you make a new 10-year contract with Mr. Ford at the end of the period for 10 years, then at the expiration of the 10 years, what?

Mr. GREENE. You have to make a new contract based upon conditions that exist at the end of the old one.

Mr. MAYO. I am not so sure about that.

Mr. GREENE. You have to take things as they are before you can change the contract.

Mr. MAYO. You have to take things as they are at the termination of the 100 years, but after another contract, I am not so sure about it.

Mr. GREENE. This provides that at the end of the 100-year period, that right to the use of the power is still maintained, no matter what other use is made of the property. I realize again that you can not get a man to go back on his own proposition, but I am simply placing this before you as one of the serious obstacles—

Mr. MAYO (interposing). And I am trying to justify Mr. Ford's position.

Mr. GREENE. I think there is a general disposition to look upon this proposition with the idea that if the Government can salvage its property and if the terms are reasonable and if, perhaps, the public benefit, such as the manufacture of fertilizer, is a part of it, there might be a very general agreement easily arrived at; but to hogtie the United States Government in this way and under these conditions, and to ask the Government in this form to subsidize your enterprise against all other private capital in the land, will make trouble on the floor, if this bill ever gets there. I simply leave that little suggestion with you.

Mr. HULL. Mr. Mayo, I was not here when you began your statement, and perhaps you have covered this, but to my mind there is a serious difficulty involved here. I am not saying how serious it is because I have not definitely decided in my own mind, and I presume none of the committee has, and that is in regard to the taking over of the Gorgas plant; the taking away from the Alabama Power Co. of this integral part of a plant of theirs. I do not think there is any question but what financially we would involve ourselves considerably in the matter. We might get by with that if there was only the financial side. However, there might be in the minds of the committee the question of the moral obligation. If we should decide we were morally obligated to return this property to the Alabama Power Co., of course, I do not suppose any of us would want to override that objection. Now, in case we should feel that way about it, is that an unsurmountable proposition with the Ford people? In other words, do they have to have that plant in order to make this contract? I will put it straight and frankly because we want to know about it.

Mr. MAYO. We have always considered it very necessary to supplement our primary power.

Mr. HULL. I understand that, and I can see that it is quite necessary.

Mr. MAYO. It is the first steam power available and the cheapest steam power that we would use.

Mr. HULL. But that is not answering the question. If we decide that we are morally obligated, I do not suppose there is any member of the committee who would want to override that objection. I think we are trying to be fair in this proposition, and I am not saying that it is my opinion at the present time that we are morally obligated, but there will come a time when we will have to decide that point, and when we decide it, if we decide that we are morally obligated to return this plant to the Alabama Power Co., then the question will come up. Will the Ford people consider this proposition at all without the Gorgas plant?

Mr. MAYO. Mr. Ford has never indicated he would consider it without that plant.

Mr. HULL, could I answer Mr. Greene's question further? Mr. Waldo has just showed me this pamphlet which has the water power act in it and it refers to what you were talking about. In section 15 it says:

"That if the United States does not, at the expiration of the original license, exercise its right to take over, maintain, and operate any project or projects of the licensee, as provided in section 14 hereof, the commission is authorized to issue a new license to the original licensee upon such terms," and so on.

Mr. GREENE. But that is optional and there is no intervening condition as there is in this proposition. There is no option left the Government here. The Government may dispose of its property and it may lease or otherwise contract that property at the end of 100 years, but it does so always subject to your right to have the power there. That is the way your proposition reads and that is the way the average man will read it.

Mr. MAYO. Do you think they can take it away from the original licensee under this language?

Mr. GREENE. Yes; they can. At the end of the time they can take it all away, but if they leave it, they leave it with them, which is a reasonable proposition under those circumstances. In this case, however, you have to take

it up from another angle. You offer us words and promises for our heirs but you take away all chance of our carrying out those promises. You say we can dispose of the property except the water power.

Mr. MAYO. If they take this property away, they have to pay for everything that the licensee has.

Mr. GREENE. I am not talking about the question of money but the question of principle and the question of the proper public policy, and what we shall do to our heirs when we are dead and gone for a good many years, and they are helpless about it. Once upon a time, in the development of our English-speaking jurisprudence, there was a revolt against this very doctrine of rule by a dead hand, which ruled living generations from the grave centuries back. Now, you are going to tie us and our children's children for centuries to your contract. I do not care to ask any further questions.

Mr. HULL. Is that all you wanted to say, Mr. Mayo?

Mr. MAYO. Yes; thank you.

Mr. HULL. Mr. Mayo, you have read Mr. Cooper's letter to the committee under date of February 21, I presume.

Mr. MAYO. I have not; no, sir.

Mr. HULL. Has not your attention been called to Mr. Cooper's letter in which he makes the statement that if we accept the Ford offer it will cost \$1,275,000,000 over and above the amount of money received from Ford?

Mr. MAYO. I heard Mr. Cooper's testimony but I did not read the letter.

Mr. HULL. You heard the testimony along the same line, which was the same as the letter.

Mr. MAYO. Yes.

Mr. HULL. Have you had his figures analyzed?

Mr. MAYO. They appeared so ridiculous to me I did not attempt it.

Mr. HULL. The figures ought not to be ridiculous if you put them down and some one can figure them out. that is a mere matter of figuring. As I understand your proposition, you claim that you return the money that the Government will spend from this time on, with 4 per cent interest; is not that true?

Mr. MAYO. Yes, sir.

Mr. HULL. And he says that under your proposition you do not return it by \$1,275,000,000.

Mr. MAYO. I know it.

Mr. HULL. Now, surely, there is some one who can figure that out and straighten that out and bring those figures together and tell us wherein he is wrong, if he is wrong.

Mr. MAYO. We can do that.

Mr. HULL. I should certainly like to have that done.

Mr. MAYO. We will do that and put it in the record, if you wish.

Mr. HULL. I would like to have that done.

(The statement referred to follows:)

Mr. Cooper's statement of the losses to the Government under the Ford offer is based upon the assumption that it is possible for the Government to collect compound interest on its war or other losses.

One does not lose that which one never had, and never had a possibility of having, and the Government does not lose interest which is not payable and never was payable, because no one has ever offered to pay compound interest to the Government on its expenditures.

On the other hand, Mr. Ford offers to actually set up a sinking fund for the benefit of the Government, and provide for the maintenance and administration of the fund so that all interest earned by the fund shall be reinvested for the increase of the fund. The higher the rate which the fund can be made to earn, the more quickly the Government's investment in the project will be amortized and refunded. He is not using compound interest against the Government, but for the benefit of the Government. There is nothing theoretical about this advantage to the Government, for the sinking fund is to be actually set up and the earnings are to be actually realized under his plan.

If we were to follow Mr. Cooper's method of figuring on Government losses, a compound interest that can never be realized, then we should do the same with Government gains. The Ordnance Department has indicated that 5 per cent of \$47,000,000, or \$2,350,000, is a reasonable measure of the annual saving to the Government through the assuming by Mr. Ford of the depreciation on the nitrate plant for 100 years.

If Mr. Cooper's statement is fair, then it is fair to assume that the Government should set aside this amount annually and let it draw compound interest at 4 per cent.

In 100 years this annual saving invested at 4 per cent would amount to the tidy sum of \$2,908,183,750, and we have not included any item of Mr. Ford's offer, other than this one feature. We could add to the absurdity by including in the annuity the saving due to guarding, routine maintenance, etc., but it does not appear to be necessary.

Mr. Ford's payments under his offer will take care of the principal and interest of a 4 per cent bond issue without an appropriation by Congress, and we believe that the project can be readily financed on this basis.

Nitrate plant No. 2 will produce some 2,000,000 tons of completed 2-8-2 fertilizer, or somewhat more than 25 per cent of the annual fertilizer consumption of the United States. If Mr. Ford's economies result in saving only \$15 per ton to the farmer, on only this amount of production the annual saving would be \$30,000,000, and the saving in 100 years, without interest, would be \$3,000,000,000.

Mr. JAMES. Mr. Mayo, in response to a question by Mr. Greene, you read a part of the water power act. Are you willing to strike out the language that you use in section 17 and use the language you read to the committee from the water power act?

Mr. MAYO. I could not say right off the bat. I will take it under consideration, however.

Mr. JAMES. I thought that was your explanation of what you thought your language meant.

Mr. MAYO. No; I simply brought that up. I never saw it before, but it seemed to me it was quite parallel. I will take it under consideration, though, and see.

Mr. JAMES. Mr. Mayo, when you were before the committee before, I said:

"Mr. JAMES. When the Judge Advocate General was before the committee the other day, the matter concerning the cost of the slowage rights came up, and he stated that Mr. Ford believed the Government could acquire those cheaper than anybody else, and there was not any doubt in his mind that Mr. Ford intended to reimburse the Government for those expenditures, and that when you appeared before the committee you would agree with his view concerning that matter."

Have you taken that up with Mr. Ford?

Mr. MAYO. I have, but he has not changed his views yet.

Mr. JAMES. I understand that Mr. Worthington in his conversation with Mr. Ford had the impression that Mr. Ford intended to repay the Government.

Mr. MAYO. A little difference of opinion has existed on that, and we have not come to a conclusion as yet.

Mr. JAMES. Have you talked with him about it?

Mr. MAYO. Yes, sir.

Mr. JAMES. When you were before the committee before, and when Mr. Worthington was before the committee, I called attention or asked you if nitrogen could not be used for some other purpose besides manufacturing fertilizers, and you both said yes.

Mr. MAYO. Yes, sir.

Mr. JAMES. That being so, why not strike out the word "nitrogen," so that it will read, "the company agrees to operate nitrate plant No. 2 at the approximate present annual capacity of its machinery and equipment in the production of fertilizer compounds."

Mr. MAYO. The nitrogen capacity of the plant was the reason for putting that in. Everything is based on its nitrogen capacity.

Mr. JAMES. Could we not put in some language there by which the nitrogen could not be used for any other purpose except the manufacture of fertilizer?

Mr. MAYO. Does not this imply that it is for use for fertilizers?

Mr. JAMES. You say that nitrogen can be used for manufacturing something else besides fertilizers; and if that is so, there is no prohibition here so that you can not use it for any other purpose, no matter what you may intend to do.

Mr. MAYO. We might say nitrogen for fertilizer and other fertilizers. I think we could take care of that all right.

Mr. JAMES. That might make it better. Major Burns said this when he was before the committee in answer to a question from Mr. Hull:

"Now, over and above that he may or may not guarantee to run it as a nitrogen-fixation plant. I think you can interpret it very readily to the effect that he does agree to run it as a nitrogen-fixation plant."

Have you taken that up with Mr. Ford so the language can be changed, so that there will not be any doubt about it? Major Burns seemed to think there was some question about it, although he thought it might be construed in that way.

Mr. MAYO. Well, nitrogen is one of the component parts of fertilizer.

Mr. JAMES. If you will turn to page 209 of Mr. Burns's testimony, in the middle of the page you will find that his statement is, "If he does, that is a very great additional benefit to the Government from the standpoint of preparedness."

Mr. MAYO. I think this is plain. It ties it down to the "present annual capacity of its machinery and equipment in the production of nitrogen and other commercial fertilizers." I think that nails it down.

Mr. JAMES. I am not an attorney, but when the attorney representing the Ordnance Department has some doubt about it it seems to me the language ought to be changed so there will not be any doubt about it.

Mr. MAYO. We have not given that any thought, because the question was not brought up before. No matter how we operate we guarantee it will be available.

Mr. JAMES. As I have said, I am not an attorney, but when the attorney for the Ordnance Department has some doubt as to what the language means I say again that it seems to me the language ought to be changed, after consultation with him, so that you both understand it in the same way.

Mr. MAYO. On the other hand, the attorney of the Judge Advocate General's office was sure that we had so worded our offer that we guarantee it. If it is necessary to clarify it, I think we can do it.

Mr. KEARNS. Mr. Mayo, you speak of clarifying this contract. If the committee should decide to go to Muscle Shoals, would it be possible for Mr. Ford and yourself to accompany the committee in order that they could have a chance to talk with him and with you together.

Mr. MAYO. I am sure I could go. I can not answer for Mr. Ford.

Mr. KEARNS. I was talking about Mr. Ford and whether he could go with you.

Mr. MAYO. He may be able to.

Mr. KEARNS. We have had this experience. You are limited in your power to agree to do certain things that are not contained in the contract, but with Mr. Ford there on the ground he could tell us whether or not he would agree to any changes we wanted to make.

Mr. MAYO. Well, I will ascertain if he can go. I think he will be glad to if he can.

Mr. KEARNS. Now, you have authorized a change in the contract so that this company that is to be organized will have a paid-up capital of \$10,000,000?

Mr. MAYO. Yes, sir.

Mr. KEARNS. Would that \$10,000,000 be the working capital? Would that \$10,000,000 be put in the business to operate the business alone?

Mr. MAYO. It would all be put into the business. I could not say just how it would be used—whether it would be working capital or partly plant investment.

Mr. KEARNS. That is what I wanted to know, and I should think that the committee would want to know whether this \$10,000,000 was to be used in carrying on the business there or whether part of it would be used in developing the plant.

Mr. MAYO. Some of it would have to go into the plant most assuredly.

Mr. KEARNS. You would not be able to say how much of the \$10,000,000 would be used in conducting the business?

Mr. MAYO. My opinion is the whole \$10,000,000 would go into the plant.

Mr. KEARNS. You would have to have working capital in some amount, would you not?

Mr. MAYO. We said not less than \$10,000,000.

Mr. KEARNS. That means, then, you would put in more than \$10,000,000, probably?

Mr. MAYO. Well, whatever is necessary. I imagine it will be twice that.

Mr. KEARNS. How much money will you have to invest for the purpose of carrying on that part of the business which would be represented by the manufacture of fertilizer?

Mr. MAYO. I do not know that I could answer that. Mr. Ford has always said he would put in sufficient capital to properly operate it. Now, we do not know what that will run to in amount.

Mr. KEARNS. That is, to properly operate it, manufacturing 110,000 tons of ammonium nitrate?

Mr. MAYO. Yes, sir.

Mr. KEARNS. And as I understood your testimony before, that would mean about 2,000,000 tons of manufactured fertilizer; that is, the finished product?

Mr. MAYO. That would be the equivalent of 2,000,000 tons on about a 2-8-2 mixture.

Mr. MILLER. Mr. Mayo, your conference with Mr. Ford has only changed his original bid or his offer of January 25 in the two particulars that you have enumerated?

Mr. MAYO. Yes, sir.

Mr. MILLER. You still adhere to the obligation that the United States must acquire the title to this Gorgas steam plant, do you?

Mr. MAYO. Yes, sir.

Mr. MILLER. And vest it in Mr. Ford?

Mr. MAYO. Yes, sir.

Mr. MILLER. Since you have appeared before the committee very able arguments have been made, pro and con, on the rights of the Alabama Power Co. under their contract with the United States Government regarding this Gorgas plant, and it appears that it is going to be an exceedingly troublesome thing to do, and promises a litigation that is almost appalling. Some of our colleagues on the floor of the House may adopt the view that to undertake to segregate the rights of the Government and the rights of the Alabama Power Co. under their contract as they are sewed together, or as I have expressed it before, lockstitched and bound together, I do not know how we can do it, and that may defeat the entire offer of Mr. Ford. Is it beyond the range of possibility that Mr. Ford would further consent to a modification of his offer so that he would take the Gorgas plant in its present condition and assume the responsibility of segregating the Government's rights from the rights of the Alabama Power Co.?

Mr. MAYO. Mr. Ford would not be willing to take over any legal work in reference to it.

Mr. MILLER. Would not be willing?

Mr. MAYO. No, sir.

Mr. MILLER. Then so far as the Gorgas plant is concerned, the offer of Mr. Ford is that he shall have all the property—I am referring now to subdivision (d) of section 11—

"All of the property constituting the steam power plant built and owned by the Government at Gorgas, Ala., on the Warrior River, including lands, rights of way, buildings, machinery, material, fixtures, apparatus, appurtenances, tools, and supplies and the transmission line from the Gorgas steam plant to the nitrate plant No. 2 at Muscle Shoals, and all other transmission lines belonging to the United States and connected with any of the aforesaid Government properties."

We shall vest those rights in Mr. Ford. I was in hopes, Mr. Mayo, that some modification of that paragraph would be effected by which Mr. Ford would take over that plant in the condition it is in now and fight it out with the Alabama Power Co. You think he would not do that, Mr. Mayo?

Mr. MAYO. I think he is of the opinion that the Government is in a much better position to untangle it. He has said right along that he does not expect anything of the Government that they could not straighten out.

Mr. MILLER. But if the Government should undertake to settle it along the lines indicated by Colonel Hull, of the Judge Advocate General's office, and the court should hold that the Alabama Power Co. had a subsisting right there and the United States Government was bound, according to its contract with the Alabama Power Co., it would be an utter physical and legal impossibility for the United States Government to comply with Mr. Ford's offer, because it could not turn over to him this property.

Mr. MAYO. If it was not a legal possibility I am of the opinion that he would not ask for it. The opinions we have are, though, that it is quite possible.

Mr. MILLER. But our contract with the Ford Co., in the event that it was accepted by Congress, absolutely binds the United States Government to quiet the title to the Gorgas steam plant and vest it in your company.

Mr. MAYO. Yes.

Mr. MILLER. Now, suppose we should undertake that and at the end of the litigation find ourselves in the condition that the courts, which constitute our highest authority, hold that the rights of the Alabama Power Co. are defined in their contract and it is our duty to sell to the Alabama Power Co. in the manner provided for in their contract, thereby making it absolutely, legally, and physically, impossible to comply with this clause of Mr. Ford's offer. Now, we may find ourselves in that position and thereby there would be a breach in that respect in the contract.

Mr. MAYO. Well, I think some satisfactory arrangement could be made.

Mr. MILLER. We can not satisfy him, because one very able lawyer has appeared before us, in behalf of the Alabama Power Co., and he has maintained that it will be impossible for the United States Government to sell its interest in the Gorgas steam plant to anybody else in the world except to the Alabama Power Co.; and another lawyer on the other side advises us that the Alabama Power Co. has not any rights there. Now, we have conflicting opinions of lawyers on that proposition, which, of course, is to be expected.

Mr. MAYO. Yes, sir.

Mr. MILLER. And in the end it would go through the United States courts, and we may find ourselves absolutely in a condition where we can not comply with this provision of your offer.

Mr. MAYO. In that event you could reimburse us, I presume. But we do not think you are going to have any difficulty on that score.

Mr. MILLER. At the end of the contract it is provided "that the above proposals are submitted for acceptance as a whole, and not in part"; and if it should happen that we were unable to comply with Mr. Ford's offer as a whole, is it not your understanding that that would vitiate the entire offer of Mr. Ford?

Mr. MAYO. It would; yes, sir.

Mr. MILLER. Now, there are two other important contracts entered into by the United States Government, one with the Air Nitrates Corporation and the other with the American Cyanamid Co., regarding the operation of these plants and the payment of royalties. I suppose when we convey these plants to Mr. Ford's company that company would take them subject to these existing contracts?

Mr. MAYO. Yes, sir.

Mr. MILLER. I believe the last time you were before the committee you gave it as your judgment that bonds could be sold at 4 per cent?

Mr. MAYO. Yes, sir.

Mr. MILLER. For the purpose of building this project down there, whether the cost be \$50,000,000 or \$42,300,000, which latter sum, in your judgment, would be the cost?

Mr. MAYO. Yes, sir.

Mr. MILLER. Have you any further light to give to the committee on that matter?

Mr. MAYO. I do not know that I have.

Mr. MILLER. You have no more information as to the ability of the United States Government to sell these bonds at 4 per cent at the present time than you had when you were before the committee on the previous occasion?

Mr. MAYO. I do not think I have.

Mr. MILLER. Have you still the idea in mind that these bonds could be sold at 4 per cent?

Mr. MAYO. I certainly have.

Mr. MILLER. I would like to get a line on that suggestion of yours. You must be basing it on some understanding or conference or assurance you have had from financial people. Would you object to stating to the committee what the basis of that statement is, that those bonds can be sold at 4 per cent?

Mr. MAYO. Mr. Ford thinks he can raise that amount by paying not over that amount of interest.

Mr. MILLER. Mr. Ford thinks he can; that is rather an indefinite statement. Would Mr. Ford be willing to put that in his contract, that he hereby guarantees those bonds to be negotiated at 4 per cent interest?

Mr. MAYO. I do not think so.

Mr. HILL. Mr. Mayo, on page 374 of the record I asked some questions of Mr. Worthington. I do not remember whether you were present at that time or not, so perhaps I had better read you the paragraph before that in order to give you the connection. I asked Mr. Worthington this question:

"Mr. HILL. In connection with your expression in reference to the allotment, whether there would be any allotment of a definite amount of horsepower for the use of the fertilizer plant and the nitrate plant, what would that be in value?"

"Mr. WORTHINGTON. In that particular case, measuring the production of nitrate plant No. 2 in ammonium nitrate, it would be about 110,000 horse power.

"Mr. HILL. You spoke of it being from 100,000 to 110,000 horsepower.

"Mr. WORTHINGTON. Stating the production in terms of ammonium nitrate."

I then asked him this question, which I want to ask of you as Mr. Ford's representative:

"Mr. HILL. Would it be a thing for us to consider here in connection with section 14, concerning which there have been a good many questions—you probably recollect that the Secretary of War testified that he was not clear as to the guaranty for the production of fertilizer, so we have been particularly interested in section 14."

Then I asked him this definite question, which I should like to ask of you:

"Suppose we added to section 14, in the third line, after the words 'ammonium nitrate per annum,' something to this effect:"

This is a suggestion of a change in paragraph 14 of the Ford amended offer, and I am asking you if Mr. Ford would be willing to put in the third line, after the words "ammonium nitrate per annum," something to this effect: "and that the company would promise to devote to the said production 100,000 of primary horsepower from Dams Nos. 2 or 3 or from the steam plant at Gorgas or the steam plant at nitrate plant No. 2 throughout the lease period."

Could you answer that question for Mr. Ford, whether he would be willing to amend section 14 by adding that language?

Mr. MAYO. Well, I can hardly see the necessity of it.

Mr. HILL. Just let me explain. Section 14 provides for nitrates or other fertilizer products in terms of ammonium nitrate.

Mr. MAYO. Yes, sir.

Mr. HILL. It has been stated to the committee that that was equal to about 100,000 horsepower?

Mr. MAYO. Yes, sir.

Mr. HILL. That is what Mr. Worthington says. Suppose, in the perfecting of the process of manufacture, only 25,000 horsepower would be necessary for the guaranteed amount of fertilizer. This plant is in the center of the Fourth Army Corps Area, which contained the training grounds of most of the eastern and southern divisions during the late war.

In the event that any further national emergency came about, Camp McClellan and all those other camps will undoubtedly be used again for national training centers for troops. They always have been so used because of the climate. I am very much interested in the securing to the Government all of the electric power for general use there that is necessary. So if later on, in order to produce this fertilizer, there would only be necessary 25,000 horsepower per annum, I am asking if Mr. Ford would then be willing to turn over to the Government the remaining 75,000 horsepower for the Government's general purposes: for instance, to light Camp McClellan or to use it for anything else there that it might be necessary to use it for.

The Alabama Power Co. has made an offer to dedicate 100,000 secondary horsepower, and I would like to ask you if Mr. Ford would be willing to modify paragraph 14 by guaranteeing the Government during the terms of the lease either 100,000 primary horsepower or 100,000 secondary horsepower for use for any purpose the Government decided to put it to.

Mr. MAYO. I think he would be glad to guarantee the Government something along these lines.

Mr. HILL. Will you please think of that and let us have your answer to it in the record, because we will be asked to compare that with the offer of the Alabama Power Co. or the Alabama Power Co.'s suggestion? Will you kindly put in the record an answer along that line?

Mr. MAYO. Yes; I will be glad to do that.

Mr. Ford understands his offer to operate plant No. 2 to approximate present capacity as a guarantee that he will utilize at least 100,000 horsepower in the manufacture of commercial fertilizers. He will use as much of this in primary power and as much in secondary power as will give greatest economy under operating conditions. Of course, in a national emergency such

as is referred to by Mr. Hill above the entire power capacity of the project is immediately placed at the disposal of the Government.

Mr. FIELDS. Mr. Mayo, as I read section 17, which Mr. Greene discussed with you, I do not find the word "forever" in the section to which Mr. Greene referred; I do not find, with regard to the company's lease that the word "forever" does appear.

Mr. MAYO. No, sir.

Mr. FIELDS. But it provides that it shall be done upon such terms as may then be determined?

Mr. MAYO. Yes, sir.

Mr. FIELDS. I just wanted to straighten that out. I understand that your definite answer as to why this franchise should be for 100 years is that the investment that will be required is entirely too large to be made upon a 50-year franchise?

Mr. MAYO. Yes, sir.

Mr. McKENZIE. Mr. Mayo, I want to ask you one or two questions in relation to paragraph 17, concerning which Mr. Greene interrogated you at some length. I think I understand that paragraph, and I believe I understand the purpose of Mr. Ford in having it drawn in the manner in which it is drawn, and I do not fully concur with my friend Mr. Greene as to the danger in that section as it is drawn. The question I want to ask you is this: At the end of the 100-year period the Government has the right to take over this property and operate it?

Mr. MAYO. Yes, sir.

Mr. McKENZIE. In that event the Government undoubtedly would want a market for this power, and that being true, there is no question in my mind but that the corporation then existing could procure power from the Government, is that not true?

Mr. MAYO. Yes, sir.

Mr. McKENZIE. However, it might be possible there is one contingency, and I think that is the one in the mind of Mr. Greene, that at that time the Government might desire, if we keep on drifting, as we have been drifting for a number of years, in my judgment, the Government might desire to enter into some manufacturing activity, or socialize the plant in a way, and in that event the Government might decline to sell to this corporation any power; but that, of course, is problematical.

Mr. MAYO. Yes, sir.

Mr. McKENZIE. On the other hand, in case the Government should decide not to operate it, but would lease it to some one else other than the successors of the Ford corporation, is it your judgment that the public utilities commission, which undoubtedly would be in existence in the State of Alabama, or that the Federal laws regulating such matters would require that a great plant such as you propose and have visualized, that will be standing there on the banks of the Tennessee River, would be entitled to the use of power, and that no political organization or any other combination that might be set up could be justified or would even be permitted, under the law, to simply say to those people, "You can not have power." What do you think about that?

Mr. MAYO. That was the whole thought in framing that paragraph.

Mr. McKENZIE. If that is true, do you not feel that in case there are some of our friends like my friend Mr. Greene, who have some apprehension about the violation by that language of established precedents in our country, that you could leave that particular part of the paragraph out without endangering the people who will own the stock and bonds of this company 100 years from now, and eliminate that bone of contention, which apparently has been engaging the minds of some of the people who have been studying this question?

In other words, Mr. Mayo, is it not a mere incident that would not justify Mr. Ford or his representatives in arbitrarily standing on that one little point in the contract, in comparison to the other great issues involved? Putting it directly to you, would you have any serious objection to the elimination of that paragraph?

Mr. MAYO. We had not thought of it in that light. There might be some change made there. When we were framing up the paragraph Mr. Ford's whole thought was that he did not want any preferential right of any kind, except that he did not want to stand the chance of the power being taken away from the plant.

Mr. McKENZIE. I understand that.

Mr. MAYO. So that wording was framed to prevent that happening.

Mr. McKENZIE. I think I perhaps would have felt a good deal like Mr. Ford on that proposition, looking 100 years into the future, but realizing that the Government and the courts of our country are usually just and fair, I can not feel any great apprehension of any danger or of any abuse that might result to the successors of the corporation in case that language was eliminated from the contract.

Mr. MAYO. It would almost amount to the confiscation of the property if we were deprived of the power.

Mr. McKENZIE. That is why I feel that you would be protected, undoubtedly, by the public utilities commission if that commission existed, or if no such commission existed certainly you would be protected under the law, having in good faith established a plant alongside of this stream where the power was to be used. So it seems to me you would have some rights that would be given consideration.

Mr. MAYO. We will take that into consideration.

Mr. GREENE. May I follow that, Mr. McKenzie? The particular emphasis that I am seeking to give to this proposition, Mr. Mayo, is upon the prerogative of a government always to be free to exercise its own option to do anything which it considers a matter of public policy. I am quite confident that, while you are here properly representing the interests of this immediate, prospective investment there, you do not want that proposition to embarrass the Government in any possible way nor lead it upon a policy which your children might want to repudiate. The word that is a stumbling block in this thing is not what has been suggested with some attempt to repeat my questions here, but is the words "to have power," which involves no option whatever. It does not say there is an option of preferential right to make a bid; it says the right to have power, and the word "right" has a very clear definition, of course, in law. A right is a right, not an option.

The CHAIRMAN. Will you let me also ask this question right there in connection with your proposition? If, as Mr. Mayo suggests, in 10 years they might come to an agreement that 10 years would not void this language that Mr. Greene is referring to, because it would also always give Mr. Ford the right to have his property protected before anybody else.

Mr. GARRETT. You mean the first 10 years following after the first 100 years?

The CHAIRMAN. Yes.

Mr. GREENE. The Government could only sell what it has, and if it has a property or a use which has entailed upon it another use, it can only sell that, and that entailment is in the words "right to have power." They would sell the property to somebody else or lease it to somebody else, always subject to that other use.

Mr. GARRETT. In the next 10 years the contract will be under a different agreement.

The CHAIRMAN. They may not make a different agreement; they may insist upon their rights under this agreement.

Mr. GARRETT. I want to ask Mr. Mayo this question, and ask that you consider it in connection with this section, which seems to raise a question of the right in perpetuity. I want to ask you if the language of section 17 shall be so modified as to give the successors of the Ford corporation at the end of 100 years equal rights with all other parties under then existing public utility laws, either State or Federal, whether that would be acceptable, when they go to make a new contract; that is the only question there is here.

As far as I am concerned, I do not think that at the end of the 100 years there will be any more question than there is now that the people and everybody concerned will be protected by the public utility laws of that time.

Mr. GREENE. I do not doubt it. I do not want to be wearisome about this thing, but I think you will find, Mr. Mayo, that many people who are perhaps now disposed to some such disposal of the property as may be contemplated in the Ford offer still have conscientious reservations about the terms as they involve this public policy. I want to make this picture plain, if I may. If, 100 years ago, men sitting in this Congress had tied up to some specific contract with a citizen or a group of citizens that involved certain mechanical agencies and perpetuated the use of those agencies in those people by the hard and fast terms of that contract, we to-day would be confronted possibly with this very situation: At the time the fathers made that contract there was no transportation by steam; electricity was unapplied to motive power; the telephone, the telegraph, and various other things which now enter into the very texture of this contract itself were not in existence, and mostly unheard of. But they

have completely revolutionized physical existence in this land, let alone the economics it was based upon.

If we to-day undertake to make a hard and fast contract which is blinding in perpetuum, it may be, very possibly, that in 100 years from now not only is the concept and policy of our Government completely changed, but the Government itself may be at that time doing things which most of us do not want it to do. Not only that, but this very fact is possible, that we no longer shall depend upon water power for motive power; it may be possible that the dreams of the philosophers and engineers of extracting power from the great reservoirs in the universe are applicable, and this thing is entirely out of the question. It may be said that works to the interest of the Government as much as to the interest of Mr. Ford, but yet we are presently engaged in mortgaging a future in specific detail. The fathers very wisely provided in the Constitution terms of generality, so that those provisions would be general enough to meet conditions in the future. Why should not this contract be written in the same sort of way, so that if conditions change the Government is always free, it is superior to any interest that may compete against it? That is what I am asking for.

Mr. MAYO. I do not want you to think you are wearying me. We court the full vent of the committee's feeling on this matter. It is quite a different thing to sit around and criticize a contract than it is to sit down and make it out of whole cloth.

Mr. GREENE. I understand that thoroughly.

Mr. MAYO. The only instructions we had from Mr. Ford in making this contract up was not to give him any preferential right of any kind, with the exception that we were to fortify it against the liability of having the power taken away from the plant. We worded it as best we knew how. I do not pretend to say that we are dead right or that we have it in the best form.

Mr. GREENE. While it is true that presently we are engaged in criticizing Mr. Ford's offer, if we take it to the floor of the House, it becomes our offer.

Mr. MAYO. I know that, and, as I say, we want the full views of the committee, and you may let them come as fast and as long as you please.

Mr. GREENE. I think that you are going to find—and I say this in no attempt to interject any sort of dissension—

Mr. MAYO (interposing). There is no resentment on my part; I do not care how far you carry on your discussion.

Mr. GREENE. I think you are going to find a good many people who study broad questions of public policy are not content to listen to the cry about fertilizer. They realize that down under that there is every vital principle of governmental policy involved, and that it is proposed in these terms, which will cover fertilizer, to establish a policy that will obtain 100 years from now, and it is a little discouraging to people who like to see their Government always free to keep safe, and to make a contract in which it will keep safe, to keep that contract in the hope that it will give public benefit, and yet to be sure that the contract has within it powers of its own termination, providing against the contingencies, not of a day, but of a century.

Mr. MAYO. Of course, Mr. Ford is of the opinion. I think that the rules and regulations for operating this plant will be so laid down that there will be no question about the power at the end of the lease period.

Mr. GREENE. You and I can stipulate here, and we would be very much in the same relationship to it that Ben Franklin was to his kite and his door key. It is true that he got a little glimpse of what lightning was, but he never saw a Packard.

Mr. MAYO. That is true.

Mr. HILL. Mr. Mayo, it is obvious from the questions that have been asked this morning that this committee is very much interested in section 17.

Mr. MAYO. Yes, sir.

Mr. HILL. I think when you appeared before the committee on February 14 you made a very clear statement of that subject, and I want to read to you two questions that I then put to you and two answers you then made, and the question I want to ask you now is whether you have said anything this morning differing from the answers you then made, or whether Mr. Ford is ready to make any change in the position you then took, and which I understand you still take?

I invite your attention to page 275 of the testimony in order that you may look at it. I shall only read two questions and two answers at the bottom of that page:

"Mr. HILL. Now, then, that paragraph, according to Mr. Ford's intention, means that after the 100-year period, if it is not arranged that his interests or the successors of his company shall buy the property, he will have a perpetual right to get indefinitely a first lien on power that is produced there, not to exceed the average amount used annually in the previous 10 years?"

"Mr. MAYO. He thought he ought to have it, everything else being equal."

Mr. HILL. That is a very unusual arrangement; it is one not noticed before. Here is the proposition which he puts up, as I understand it: It does not make any difference what the ultimate position is, his company has a perpetual first claim on the plant after the 100-year period; is that not right?

Mr. MAYO. Yes, sir. [Reading:]

"Mr. HILL. Do you think it is a proper thing for the United States Government to tie itself up in reference to this plant forever?"

"Mr. MAYO. I think so; I do not see that they can lose anything in doing so. They can always exact of him whatever they could get from anybody else."

Mr. HILL. As I understand it, that is Mr. Ford's position.

Mr. MAYO. Yes, sir.

Mr. FIELDS. Mr. Mayo, you and Mr. McKenzie apparently agree that this company could secure, either under the Federal or State public service laws at that time, the rights that it attempts to secure in paragraph 17. If you are correct in that, this paragraph is of no value to the Ford Co., except that it would give it without litigation what it would get by litigation, thereby saving the trouble of going into litigation; that is to get that right either through the Federal or State public service commission at the end of the lease; that is, to get what it asks for in this paragraph.

Mr. MAYO. Yes, sir.

Mr. WURZBACH. Mr. Mayo, in line with the questions put to you by Mr. Greene, in reference to a grant in perpetuity involved in this contract, is it not a fact that whenever the Government makes any grant of property—say land, for instance—that the Government surrenders all control of that property in perpetuity?

Mr. MAYO. I think so.

Mr. WURZBACH. Without reference to the added value that that property may have at the end of 100 years, or at the end of 1,000 years?

Mr. MAYO. Yes, sir.

Mr. WURZBACH. Under this section 17 the Government retains the right to operate this plant.

Mr. MAYO. Yes, sir.

Mr. WURZBACH. And only if it elects not to operate the plant, but desires to lease or sell the property, the Ford Co., in effect, asks for an equal right to become the purchaser of power sufficient to operate its plants?

Mr. MAYO. Yes, sir.

Mr. WURZBACH. At a reasonable rate?

Mr. MAYO. Yes, sir.

Mr. WURZBACH. Suppose that this provision was not in the contract at all, at the end of 100 years what other rights would the Government have in addition to the right that they have if they enter into this contract with section 17 in it? They could either operate the plant or they could sell the property or lease the property, and if they sold the property they would sell it at a reasonable price, and if they lease it they would lease it on reasonable terms.

Mr. MAYO. Yes, sir.

Mr. WURZBACH. Or if they sold part of the power they would sell it on reasonable terms.

Mr. MAYO. Yes, sir.

Mr. WURZBACH. So, in effect, what limitation is there upon the Government in section 17, except to prevent the Ford Co. from not receiving an equal opportunity with anyone else to become a purchaser or contractor with the Government?

Mr. MAYO. As Mr. Greene brought out, of course they would be tied to one customer.

Mr. WURZBACH. Suppose they wanted to sell to some other customer? The conclusive presumption is that they would sell it on reasonable terms.

Mr. MAYO. Yes, sir.

Mr. WURZBACH. Is not that all that the Ford Co. reserves the right to do under section 17?

Mr. MAYO. I think so.

Mr. WURZBACH. So, do you see where there would be any real limitation or restriction upon the rights of the Government at the end of the 100 years?

Mr. MAYO. I think with this reservation in the contract the Government could get as much money out of it, whatever they might do, as though that provision were not there.

Mr. WURZBACH. And it is exceptional from the usual sale of property by the Government or the usual grant by the Government in that the Government is reserving rights it does not usually reserve when it grants land or other property?

Mr. MAYO. Yes, sir.

Mr. GREENE. Do you see a parallel between the granting of land by the Government for occupancy, which is, of course, the first necessity in any social order—that is, some place to live—and the granting of a natural power of some kind, stored, like mines, or quarries or water power? Are they analogous?

Mr. MAYO. What is the difference?

Mr. GREENE. A thing can not contain any more than it will hold. Land can only be occupied by a man as a homestead, and the broad purpose is to give him the exclusive right to use it. Water power may be disposed of by many agencies and it is not dependent upon occupancy.

Mr. MAYO. I think it is the same.

Mr. GREENE. Are they embraced in the same class, like tenant holding, or the use of natural powers?

Mr. MAYO. Not quite.

Mr. GREENE. There is quite a difference in the philosophy of their operation. Is there not?

Mr. MAYO. There is some difference between an ordinary homestead tenant and a public-property tenant.

Mr. GREENE. Is it not the fact that the Government has two enactments of law, one for homesteading, and another for the use of water powers, which are provided for by separate acts of Congress, based upon different use?

Mr. MAYO. Unfortunately, I am not very conversant with the law in respect to those matters.

Mr. GREENE. I do not think the analogy holds. I think there is a different philosophy engaged in their use.

Then there is another thing, and that is the question as to where the Government would come out at the end of the hundred years; I do not mean expressed in terms of money; I do not care about that.

Mr. MAYO. I know; you are referring to the principle involved.

Mr. GREENE. Yes.

Mr. WURZBACH. I do not suppose Mr. Greene would make any objection if the Government should undertake to sell this property outright. Still it would be subject to the same conditions if it was a matter of policy.

Mr. MAYO. I would like to ask Mr. Greene, if he were the owner of this property how he would protect his rights at the end of a hundred years? What is your suggestion?

Mr. GREENE. My suggestion is that any man engaging in a contract with the Government has to weigh between his own mind and—not using the term in a mean sense—his selfish right of the conservation of the interests of himself and his family and his own necessity, with relation to what he has, as one unit in the great whole to all other units that make up the Government. There is quite a nice balance to start with.

The second, perhaps, is that Henry Ford and all of this living generation will have passed into oblivion long before this contract becomes terminated at the end of the 100-year period; that is, such parts of it as do terminate, and the people who will be in the then enjoyment of the property will at that time be in the enjoyment of property that has been paid for out of its earnings, and the full amount of its capital stock will have been returned more than once in all probability, and they will have made no original investment and incurred no risk.

Mr. MCKENZIE. Will you permit me to inject this at the end of your question in connection with this matter, Mr. Greene? Of course, there is a very wide distinction recognized now between the disposition of what might be termed natural resources and of property, such as public lands, and that principle. I think, Mr. Greene, has been trying to bring out in connection with that, that the Government heretofore, it might be said in severe criticism, has parted with many of our valuable natural resources and conveyed them to private interests, which, perhaps, was a mistake.

Mr. MAYO. I agree with you on that. The way I look at it is this: If the plan is successful, the plant will keep on increasing in size, and at the end of the 100-year period it will be larger than at any other period, hence the necessity for safeguarding the power. Where will you be if you do not protect yourself in some manner? You say it has paid for itself. But right at that period there may be many stockholders in it that are new; they may be new investors and they may not have made any money out of it.

Mr. GREENE. But they take the same risk that everybody does, because no generation starts even with the people of that generation, knowing the conditions of that generation. The whole philosophy of the English-speaking system is to leave each generation free to settle its own policies. As a business proposition we realize that you have to fix some definite period of time, and we have set upon 50 years as the duration of a water-power project. A century is a long time when we have to consider the future.

Mr. MAYO. There is no difference in the principle, as I see it, whether it is 50 years or a hundred years, is there?

Mr. GREENE. There is no difference in the principle so far as the pure logic is concerned, but so far as physical effects are concerned there may be all the difference in the world. So it is recognized that the term of years is not the recognition of a principle, but is an admitted compromise.

Mr. MAYO. There was considerable difference of opinion in regard to the term of 50 years.

Mr. GREENE. Oh, yes; but it was an arbitrary compromise; it was a compromise in the lifetime of a living person.

The CHAIRMAN. The testimony before the committee is to the effect that the Alabama Power Co., and also the Air Nitrates Corporation, believe that they have a bona fide agreement with the War Department officials turning over to them nitrate plant No. 2.

It is very evident to me—and I have heard all the testimony—that we are going to have litigation on that proposition; whether we turn it over to you or whether we give it to either of those other companies, it is going to bring us litigation. We may not be able to deliver over to Mr. Ford the plant as readily as some of the members would like; it may take some years to thrash this thing out in the courts.

Do you think that Mr. Ford expects the Government to expend the money in the litigation, or will he bear that expense himself?

Mr. MAYO. No, sir; I do not think he will bear the expense, but he does not think you are going to have any litigation to speak of.

The CHAIRMAN. Of course, he has not been listening to the testimony that this committee has been listening to, and I am convinced that it is going to result in litigation, so far as I can see, whatever we do.

Now, of course, I would like to settle this matter so that the country can begin to get fertilizer as soon as possible, and that the whole question can be settled without delay. Do you not think if Mr. Ford were seen about this provision it is possible that he might come to some conclusion which would avoid the great amount of litigation that evidently might crop out? Now, I say frankly that the judge advocate general has made a firm statement to the Secretary of War. He says that these other agreements are void, that these people have no rights at all. These people also have eminent lawyers, and they have been consulted regarding the rights of the companies during the war, and their coming to the assistance of the Government at the Government's request during the war, doing certain things for the Government which the Government accepted. Do you think we can brush that all aside and expect that the courts will brush it all aside, and that we ought to be compelled to bear any expense growing out of that condition? Do you think that Mr. Ford would be willing to take the thing subject to any possible litigation?

Mr. MAYO. I think if Mr. Ford took it subject to litigation there would be no telling where he was "at."

The CHAIRMAN. Do you think there is any telling where the Government is "at," if we agree to practically encourage litigation?

Mr. MAYO. It is the Government's business; not his.

The CHAIRMAN. Of course, this whole thing really is a matter that has come up in comparatively recent months; but I imagine that most Members of Congress, and I am sure so far as this committee is concerned, we did not know of all these involved situations until we began to take up this very matter.

Mr. MAYO. I think that is very true, and I think it is a good thing that they have all been brought to light.

The CHAIRMAN. I think so myself.

Mr. MAYO. Of course, Mr. Ford can not buy litigation; you can never tell what the price is. I also think the Judge Advocate General's opinion is worth a great deal. I do not think it is an opinion only. I think it is backed by his considerable experience.

The CHAIRMAN. I have a great deal of respect for the Judge Advocate General of the Army. I find that invariably he is right. Once in a while he is turned down, but I have generally found him pretty solid. But yet, since I have heard all this testimony, I have my doubts on that very thing.

But it is a matter which you might take up with Mr. Ford when you speak to him again, and you might find out whether he would be willing to consider a proposition of that kind.

Mr. MAYO. I was pretty conversant with all the facts before Mr. Ford made the offer, and I have listened to a great deal since, and I have also read and listened to a great deal of the testimony. As far as I am personally concerned, I am less doubtful now than I was when we started. I think bringing this whole business out has clarified the situation quite a good deal. I think, too, that all the so-called troubles will vanish very quickly when something is done. It would be a crime not to settle this matter very soon, so that we could get into the river this summer, if we get the contract. If this dry period is lost you are losing lots of money on top of the cost of upkeep.

The CHAIRMAN. I feel that it ought to be settled quickly. That is why I have tried to carry these hearings along as expeditiously as possible.

Mr. MAYO. Now, Mr. Chairman, there is a question in regard to one or two changes that the farm organizations were talking about, which I think you desire to take up.

The CHAIRMAN. We will be very glad, Mr. Silver, if you will present to the committee such changes as you have to suggest. We will be glad to have those changes presented either by you or by Mr. Mayo.

ADDITIONAL STATEMENT OF MR. GRAY SILVER, REPRESENTING AMERICAN FARM BUREAU.

Mr. SILVER. Mr. Chairman and gentlemen, when I testified before you a few days ago I stated that we had some suggested changes under consideration, and I now desire to present to you the changes I referred to at that time. In section 14, in subparagraph (a), the last line after the word "industries," change the period to a comma and add the following: "and if so found and determined, to reasonably employ such improved methods." That treats of the application of research, in which we want to be helpful, and which we think will be helpful as it will be employed in the business.

The CHAIRMAN. What is that suggested change; will you kindly state it again?

Mr. SILVER. In section 14, subhead (a), in the last line, after the word "industries," change the period to a comma and add these words, "and if so found and determined, to reasonably employ such improved methods."

The next suggested change is in section 15, line 3. We suggest that there be stricken out the words "at nitrate plant No. 2" and that before the word "actually" there be inserted the word "fair", making it read: "shall not exceed 8 per cent of the fair actual annual cost of the production thereof." That would bring up the question under consideration of the board of farmers, and if they did not agree it would follow along to the Federal Trade Commission for determination. The suggestion that you strike out the words "at nitrate plant No. 2" was for the purpose of bringing all the manufacture there within this contract; we were going to limit it exactly to No. 2.

The next change is in paragraph 15, line 17, after the word "time," strike out the following language, "the said board shall also determine the equitable territorial distribution of fertilizers produced at nitrate plant No. 2," and insert in lieu thereof the following:

"In order that such fertilizer products may be fairly distributed and economically purchased by farmers, the said board shall determine the equitable territorial distribution of the same and may in its discretion make reasonable regulations for the sale of all or a portion of such products by the company to farmers, their agencies, or organizations."

That is for the purpose of getting this fertilizer product to the farmers without intermediate and unnecessary cost.

Those are all the suggestions we have to make, Mr. Chairman.

The CHAIRMAN. Did you take up the proposition referred to in the prior hearings about the organizations of these three farmer organizations and the use of the words "or their successors"? Did you do anything about that?

Mr. SILVER. There was some discussion about that among ourselves, but we felt that would take care of itself. We felt that the language was ample.

Mr. QUIN. Mr. Mayo, you have heard the suggestion made by Mr. Silver, coming from the farmer organizations?

Mr. MAYO. Yes.

Mr. QUIN. Are those satisfactory to you as the representative of Mr. Ford?

Mr. MAYO. Yes, sir.

Mr. QUIN. You agree to them?

Mr. MAYO. Yes, sir.

ADDITIONAL STATEMENT OF HON. MARION BUTLER, ATTORNEY FOR MR. FREDERICK E. ENGSTRUM.

Mr. BUTLER. Mr. Chairman, I would like to have the privilege of making some observations to the committee in contrasting the two propositions; that is, the amended proposition of Mr. Ford and Mr. Engstrum's proposition. In the statement which I made previously I confined myself to a statement of the advantages of the Engstrum proposition alone, without attempting to contrast it with others or to discuss them in juxtaposition. I did that purposely because I understood some other amendments were to be made to another proposition, and I thought it would be more appropriate to contrast the propositions after they were complete. And besides it was just possible, we thought, we might want to ask the privilege of amending our proposition, in view of the amendments to be suggested. This morning we have no amendments to offer to our proposition after hearing those that have been offered to the Ford proposition. We are ready, and desire an opportunity if the committee will have the patience to listen to us, to briefly contrast the two propositions, or, in fact, state in parallel columns the Engstrum proposition with the Ford proposition, with the leading points of each, and we especially ask this because our proposition is the only one that proposes to devote the whole plant to the governmental purpose of making nitrates both for peace and war, and necessarily our proposition had to be very different from the others, but the result coming to the public and the Government are so clear when put in juxtaposition that we feel we would like to make that statement, and it might be of service to the committee in the analysis of the propositions which are before you.

The CHAIRMAN. I will be glad to submit your proposition to the committee when we go into executive session.

(The committee agreed that the following statement should be inserted:)

WASHINGTON, D. C., March 13, 1922.

HON. JULIUS KAHN,

Chairman Committee on Military Affairs, House of Representatives.

DEAR MR. CHAIRMAN: Supplementing my oral statement in explanation of the Engstrum proposal to lease Muscle Shoals, I desire to ask the attention of the committee especially to the serious scarcity of available nitrogen. There is not in sight in this country, or elsewhere, sufficient sources of supply; the demand for nitrogen is increasing faster than the supply; therefore, the supply is relatively decreasing all over the world.

The statistics presented to your committee by the Department of Agriculture show that the supply of nitrogen in the United States is grossly inadequate; that we need this year more than 10,000,000 tons of commercial fertilizer; that last year we used only half of that amount. The statistics also show that the amount of nitrogen needed in this country, for fertilizers alone, has been increasing on an average of 7½ per cent each year. This means that in nine and a half years we will need twice as much fertilizers, or 20,000,000 tons. This amount represents our needs in time of peace; but if war should come, then we will at once need a greater supply.

The evidence before you also points to the early exhaustion of Chilean nitrates and to the limited and inadequate supply in this country from coke ovens and the few other minor sources of supply. All agree that the only way to supply the present as well as future needs is by the fixation of nitrogen from the air.

We used in this country last year, for all purposes, only 175,000 tons of nitrogen in the form of ammonia, while Germany used over 500,000 tons. She got 100,000 tons of that ammonia from her coke ovens and from waste and other by-products; she got 100,000 tons from the air by the cyanamid process; and she got the other 300,000 tons from the air by the Haber process, which is the most efficient process for the fixation of atmospheric nitrogen.

It is obvious that the United States, with its vast area, needs and should use more ammonia for fertilizer alone than is used in Germany, with its comparatively small acreage; yet we used last year less than one-fourth as much as Germany. In fact we used only 40 pounds of fertilizers per acre, while Germany used 188 pounds. At the same time England used 162 pounds per acre, more than four times the amount used by us, while France and even Italy used twice as much nitrogen for fertilizers per acre as we used in this country.

It is a pregnant fact that Germany gets the bulk of her supply of ammonia for fertilizers and also for explosives from the air, and that she gets it chiefly by the Haber process. From that source, the only sufficient and unlimited source of supply, we are not producing any.

In the face of these plain facts it is clear that we need to-day all the nitrogen which can be produced at Muscle Shoals by both nitrate plant No. 1 and nitrate plant No. 2, and that we should lose no time in putting both plants to work on full time. While nitrate plant No. 2, being the cyanamid process, is the largest and will for that reason produce for the present more nitrates than can be produced by plant No. 1, which is much smaller, yet the better plant, being the Haber process, is the cheaper process and holds out more hope for the future.

No one who is concerned in providing this country with an adequate supply of nitrogen and cheaper fertilizers can favor the scrapping of plant No. 1, which would mean the abandonment of the Haber process. All the testimony before your committee is to the effect that the Haber process is the better of the two, and that it has the greatest possibilities of development; and all agree that nitrate plant No. 1 can be easily remodeled so as to make it work with complete success.

Indeed, the testimony of both the War and Agriculture Departments is that we now know how to make plant No. 1 the most efficient Haber process plant in the world. The chief defect in that plant is the want of an effective catalyst. The composition of the catalyst used by each country is a secret. When we built this plant during the war we knew all about the German Haber process, except the composition of the catalyst they were using. We tried to make one and failed; but now we know. The one other defect in that plant is the mechanism for purifying the nitrogen and hydrogen gases before they are passed over the catalyst and tied together to make ammonia, but we know now how to remedy that defect; it is purely mechanical.

Since the war we have made, in our experimental laboratories here in Washington, a catalyst which is to-day the best in the world. The catalyst used by the Germans at the time of the armistice was only 6 per cent efficient. The one which we have made, the secret composition of which we are guarding, is 16 per cent efficient as the German catalyst by laboratory tests, and I think all experts agree that it will be at least twice as efficient in practical operation, where the conditions are never as favorable as in the laboratory.

We have also succeeded since the war in making the largest and most efficient electrolytic cell in the world. This cell is the most improved method known for producing hydrogen gas. It is most efficient where you have cheap hydroelectric power; it is more efficient than the coke and water method for producing hydrogen gas now used in Germany and also in the Haber process at Syracuse, N. Y. This new electrolytic cell is a 10,000-ampere cell, and it is a tested success. The largest cell which had before been built and successfully used was 250 amperes. So we have perfected a cell forty times larger than any other ever built and used, which means greater efficiency and economy in producing nitrates. Besides, when we put this electrolytic cell in nitrate plant No. 1 we will also put in the liquid air method for taking the nitrogen from the air. It is the hope of everyone, however, that we will soon learn how to get the nitrogen from the air by electricity, as we can now get the hydrogen by electricity from water.

Therefore, it is obvious that we should not scrap plant No. 1, first, because we now need all the nitrogen that can be made by that plant, and, second, because the hope of the future development of the art, to meet the growing needs for more nitrogen and cheaper fertilizers, is through improvements in the Haber process, and, third, because we already have in the possession of our Government

two important improvements on the Haber process (the new catalyst and the new electrolytic cell), which will make this plant at once the most efficient on earth, so far as we know, for the fixation of atmospheric nitrogen.

I submit that the evidence before your committee shows that my lease of this great water power should provide:

1. That a sufficient amount of the power developed at Dam No. 2 should be used from the beginning to operate both nitrate plant No. 1 and nitrate plant No. 2 at their full capacity.

2. That the remaining power to be developed at Dam No. 3 and at other dams on the Tennessee River (and also by means of storage reservoirs on its tributaries) should be conserved and used to operate more nitrate plants by the cheap Haber process, as they are required to meet the growing need for nitrogen.

I submit further that it would be most improvident to lease Muscle Shoals, having a potential future of at least 1,000,000 horsepower, with only enough power reserved to operate nitrate plant No. 2, which will produce less nitrogen than our present needs, with all the remainder of this enormous water power surrendered and mortgaged to a private monopoly for 100 years or more.

Agriculture in the United States is now in a starved condition for want of nitrogen. With our needs for it increasing at the rate of $7\frac{1}{2}$ per cent a year, our starved condition will be 100 per cent worse at the end of the next 94 years. Indeed, at the end of 100 years our needs for nitrogen will be greater than could be supplied by the whole 1,000,000 horsepower which can and will be developed at Muscle Shoals.

The Engstrom proposal provides for operating both the nitrate plants at their full capacity from the beginning, and also provides for the operation of another nitrate plant with the power to be developed at Dam No. 3; and, further, for the operation of still other nitrate plants as fast as there is necessity to develop more power to produce more nitrogen on this river. In fact, nitrate plant No. 1, instead of being scrapped should be enlarged, as soon as possible, so as to produce more nitrates by that cheap and efficient process. The cyanamid process is much more expensive and is being abandoned by all countries which have used it. In short, under the proposed Engstrom contract, the whole water-power project will be dedicated for 50 years to producing cheap and sufficient nitrates for national defense and to supply the growing needs of agriculture for cheap fertilizer.

Under the Engstrom proposal, this property, which will enormously increase in value, will be returned to the Government at the end of 50 years, and with no strings to it. We ask for no preference at the end of the 50-year period; if our company has not handled the property during the term of the lease so as to make it to the interest of the Government and the public to renew the lease, then we should not have the right to ask for any preference, because we would not deserve it.

We do not offer to capitalize our company for \$10,000,000; first, because we are not buying any property from the United States, and second, because we are not proposing to use the larger part of this power for a manufacturing program for private profit. The only capital which we will need will be sufficient for operating expenses until we are a going concern. That amount our company will be amply able to furnish; indeed Mr. Engstrom's private means is amply sufficient for that purpose. The \$10,000,000 capital of Mr. Ford's company will be needed and will be used to build and operate automobile plants, which will use the bulk of this power for private profit. Neither the Government nor the general public will be profited to the extent of one penny by the \$10,000,000 capitalization. On the other hand, it means the robbery of the people and the industries of that section, within a circle of 1,000 miles, of all opportunity to get cheap power from Muscle Shoals; and it means the robbing of agriculture for 100 years and more of the benefit of all that enormous cheap power for producing cheap fertilizers, except the small amount needed to run the one nitrate plant, and that by the old and expensive cyanamid process.

The Engstrom Co. will be a going concern before Dam No. 2 is finished. We realize, however, that our profits will be small, if any, during that period; but when Dam No. 2 is completed, there will then be an assured profit under our contract both to the Government and to our company. But no matter what the capital of a company may be or what the individual wealth of its stockholders may be, the one important thing needed to protect the interests of the Government and the public is a good and sufficient bond, acceptable to the Government, and that we are prepared to furnish.

If Mr. Ford's proposal should be accepted the Government will be required to spend over \$60,000,000 to complete Dam No. 2 and also to build outright Dam No. 3, including the submerged land, which the Government is required to buy. After the expenditure of this large sum, the only benefit which will accrue to the public will be from the operation of nitrate plant No. 2 to make fertilizers at 8 per cent profit. This will require only 100,000 horsepower, while the remaining 550,000 horsepower, and all the power produced at Dam No. 3 will be used by Mr. Ford's company for other purposes and for private profit. Mr. Ford does not begin to pay the Government the proposed 4 per cent interest on this new \$60,000,000 investment until after the dams are built, and it will amount to only \$2,400,000 a year for the use of all of this power from both dams. In addition, the Government is required to sell outright to Mr. Ford both nitrate plants, including both of the completed steam plants standing by them, and also the Warrior steam plant and transmission line, with the large limestone quarry thrown in, for the pittance of \$5,000,000. One of these nitrate plants has cost \$67,000,000 and the other \$13,000,000, while the Government has spent nearly \$5,000,000 on the Warrior steam plant alone. This means that property which has cost \$85,000,000 is to be sold outright to Mr. Ford for \$5,000,000, which is less than one-third of the scrap value of this important property. But why should these properties, or any part of them, be scrapped or even sold at scrap figures, when they represent an investment which is now greatly needed to be put to use as a going concern to serve a most imperative public need?

Again, why should \$60,000,000 more of public money be expended at Muscle Shoals at this time? Mr. Ford is asking the Government to build now Dam No. 3 exclusively for his own private purposes. There is now no public need that will justify the building of that dam. Every dollar put into it would be an unwarranted expenditure of public money for private use and profit.

Under such conditions the inadequate sum of Mr. Ford's offer for maintenance and the small sum which he proposes to put at compound interest for 100 years to amortize the investment made pales into insignificance, even if the Government should seriously consider making any kind of lease for the term of 100 years. Besides the Government is required to purchase the interest of the Alabama Power Co. in the Warrior steam plant, which amounts to several million dollars and which may lead to long and expensive litigation, to say nothing of the threatened litigation from the Air Nitrate Corporation, if the nitrate plants shall be sold instead of leased. Thus there are two basic defects in Mr. Ford's offer: (a) It is not a good business proposition on the part of the Government; (b) it defects the purpose of the Government as declared in the national defense act by diverting the public money already invested, and to be invested, largely to serve the ends of a private monopoly, instead of using all of the same to serve the public welfare.

Under the Engstrum proposal the Government is required to spend only the amount of money necessary to finish Dam No. 2 and to redesign the two nitrate plants, which is estimated to be within \$30,000,000. We agree to use all of the power that is necessary to run both nitrate plants at their full capacity, and besides to make nitrates regardless of whether the same can be made at 8 per cent or not. No one can now and probably no one will ever be able to make nitrates at any profit by the cyanamid process.

All the testimony before your committee shows that there is not any plant to-day for the fixation of atmospheric nitrogen which is able to produce it at a figure as low as Chilean nitrates are being sold at the present time, which is from \$45 to \$55 per ton. Therefore, Mr. Ford can not at present make any nitrates at 8 per cent profit, but he can make automobiles with greater profit at Muscle Shoals than he can at Detroit; here is the "nigger in the woodpile" in his proposal.

The Engstrum Co. proposes to run a research plant to develop improved methods for producing cheap nitrates, which will mean cheaper fertilizers. I submit that vastly greater results can be expected from a research plant operated under conditions where the whole purpose of the plant is to produce more and cheaper nitrates than under a lease where the making of nitrates will, at best, be a side issue. Under the proposal of Mr. Ford there will not be produced at Muscle Shoals any more nitrates at the end of 100 years than will be produced the first year of the lease. There will be little purpose in operating an efficient research plant when the Haber process has been discarded and in the face of a declared purpose never to increase the output of nitrates. The

fact is, there is not a reasonable ground for even a hope that Mr. Ford will ever develop any improved process for making nitrates at less than present prices.

The selling price of the Chilean product varies greatly and without any apparent cause. The price is largely arbitrary and is based apparently on "what the traffic will bear." Nitrogen is the most important and the most expensive ingredient of commercial fertilizer; therefore it is of first importance to the success of agriculture and to assure a lower cost of living to the consumers that nitrogen should be furnished much cheaper. Indeed, the food supply of the world is threatened by the scarcity of nitrogen. Besides, the only possible way to stop the growing migration from the farms to the cities is to make agriculture more profitable, and this can not be done except by a sufficient supply of cheap fertilizers. In this connection it is important to keep in mind the fact that the driving of our high-class yeomanry from the soil means the lowering of our standard of citizenship, and this is a matter of the gravest concern to any country, and especially to a Republic like ours.

To meet this serious situation we propose to sell the nitrates to be produced at both plants at Muscle Shoals at a price lower than the cost of the Chilean nitrates and at a price to be fixed by the Secretary of Agriculture. This means that all the nitrates produced will be sold at a loss for the present of, say, from \$5 to \$10 per ton. To cover this loss, we propose to sell at wholesale all of the excess power produced at Dam No. 2 not needed to run the two nitrate plants and to set aside one mill for each kilowatt hour of power sold to finance or to subsidize the making and selling of nitrates and fertilizers at a price below present cost. This arrangement, it is hoped, will be of short duration, because the whole world expects early improvements to be made in the Haber process, by which a larger amount of nitrogen can be taken from the air at a cost much below the present selling price of Chilean nitrates.

When that hour arrives then the 1 mill per kilowatt hour for power sold will be turned by our company into the Treasury of the United States. Our company does not propose to ever make one dollar of profit on the nitrates and fertilizers produced; our profit will be derived entirely from the amount at which we may be able to sell power above the 1 mill per kilowatt hour. On the estimated production of 440,000 kilowatts at Dam No. 2 this 1 mill per kilowatt-hour will mean an income to the Government on the new investment on Dam No. 2 of \$3,500,000 per year, every dollar of which will go into the Treasury of the United States or be used in the making of cheap nitrates and cheap fertilizers. Here is a return of \$3,500,000 on an investment of \$30,000,000, as against Mr. Ford's 4 per cent return, which is \$2,400,000 on an investment of \$60,000,000.

When the need for more nitrates calls for the building of Dam No. 3, and it will come within 10 years or less, and another nitrate plant is placed by Dam No. 3, then the Government will begin to receive 1 mill per kilowatt from that power also; and if the power developed shall equal the output at Dam No. 2, then the return to the Government on the investment at both dams will be doubled, or \$7,000,000 a year, while Mr. Ford's offer of 4 per cent is only \$2,400,000 for all of the power from both dams.

But great as is the cash return from the Engstrom proposal above that under Mr. Ford's proposal, yet the benefits to agriculture and to the public generally which will result from furnishing nitrates at less than 8 per cent profit, and especially from furnishing an ever-increasing quantity to meet the growing demands, are manyfold greater.

The Ford proposal must be accepted or rejected as a whole. The Engstrom proposal is divisible, the construction and the lease for operation are separate and distinct. If the Government prefers itself to finish Dam No. 2 and redesign the nitrate plants, then we will lease the property when it is ready to be operated; otherwise, we are ready to handle the construction also under the terms of our proposal.

Respectfully submitted,

MARION BUTLER.

(Thereupon the committee went into executive session, after which it adjourned to meet to-morrow, March 8, 1922, at 10.30 o'clock, a. m.)

COMMITTEE ON MILITARY AFFAIRS.

HOUSE OF REPRESENTATIVES,

Wednesday, March 8, 1922.

The committee met at 10.30 o'clock a. m., Hon. John C. McKenzie (acting chairman) presiding.

Mr. McKENZIE. Before proceeding, I would like to have it stated in the record that Congressman Fields, of Kentucky, who has been very faithful in his attendance upon the hearings of this committee, is ill this morning and will not be able to be present.

I understand that our colleague, Mr. Bankhead of Alabama, is present and desires to make a statement.

Mr. BANKHEAD. Mr. Chairman, by an arrangement I had with the chairman of the committee, he very kindly consented that the Alabama delegation might have an opportunity to present briefly our position on this question, and it has been agreed that there shall be three short addresses made, and Mr. Oliver will make the first statement, followed by Judge Almon, and I shall make a very brief concluding statement.

Mr. McKENZIE. Just as you wish, Mr. Bankhead.

**STATEMENT OF HON. WILLIAM B. OLIVER, A REPRESENTATIVE
IN CONGRESS FROM THE STATE OF ALABAMA.**

Mr. OLIVER. Mr. Chairman, the Alabama delegation has received a letter from Hon. B. M. Allen, of Birmingham, Ala., who presided at a large mass meeting in Montgomery on Wednesday last, at which certain resolutions were adopted, and he has requested that the resolutions be read to the committee, and I desire to now read them. They are very complete and informing, and set forth in a forceful, proper, and accurate way the attitude of the people of Alabama on the subject to which the resolutions relate.

**MEMORIAL TO THE PRESIDENT AND CONGRESS OF THE UNITED STATES AND THE
COMMITTEES OF CONGRESS, ADOPTED BY THE STATE-WIDE MASS MEETING HELD
IN THE CITY AUDITORIUM AT MONTGOMERY ON WEDNESDAY, MARCH 1, 1922.**

We, citizens of Alabama, 5,000 strong, representing county governments, municipal authorities, women's clubs, labor bodies, chambers of commerce, civic bodies, and farmers' organizations from every quarter of the State, in mass meeting assembled at Montgomery, with full confidence in both the justice and wisdom of the President and Congress, do hereby declare:

That while the entire Muscle Shoals stretch of the Tennessee River lies within the borders of this State, the right to control and regulate the river in the interest of the Nation's commerce has been ceded by the State of Alabama to the Federal Government. We recognize the fact that Muscle Shoals is the property of the Nation, belonging alike to the people of all of the States, and, while we claim no greater right than any other State to say what shall be done with Muscle Shoals, we believe that we but exercise the guaranties of the Federal Constitution when we petition Congress that this great national asset be not employed by the Government as an instrumentality for fastening upon us and upon our children and our children's children the yoke of an oppressive and burdensome monopoly.

We affirm that the Alabama Power Co. now owns and controls a number of splendid power sites on the Coosa River in this State; that it owns and controls all of the available power sites on Little River in Alabama; and that it owns the wonderful power site at Cherokee Bluffs on the Tallapoosa River in this State; that in the 14 years since its incorporation it has built one power dam in this State and commenced work on one other dam; that at the present rate of development of the power potentialities already under the control of this corporation more than 100 years will go by before all of these dormant water powers are harnessed; that it has been the policy of that corporation to develop only such power as can be sold in small units and at high prices; that controlling as it does all of the great water-power sites in a State blessed by God Almighty with wonderful power possibilities, it, a foreign-controlled corporation, is in position to litigate with any American-owned organization which may seek to develop any one of Alabama's wasting water powers, just as it now threatens to litigate with Henry Ford, or with the Government, if

either seeks to build Dam No. 3 at Muscle Shoals, or to control the Government-built steam plant and transmission line at Gorgas; that in spite of the fact that this foreign-owned corporation has long enjoyed exemption from taxation in this State, it has been busy ever since its entrance into Alabama in preempting every great power site within our borders, and in so copper riveting its hold on all of Alabama's great hydroelectric potentialities as to prevent for all time their development by any possible competitor; that it has been its policy to buy these power sites at farm-land prices and to hold them in perpetuity as power sites; that it already controls the utilities in our principal cities and is year by year securing the control of the utilities in our towns and villages; and that if it secures Muscle Shoals it will have perfected its control of all of our great water powers and will hold in its selfish grasp all of these instrumentalities, placed within our borders by a beneficent providence for the promotion of the commercial and industrial welfare of all the people.

We hold that it would be a travesty on legislation if, after many years of congressional consideration of how best to conserve the power in our navigable streams for the benefit of all the people and how most surely to preserve them from being used as instruments of monopoly, the Nation's greatest water power should be handed over to the Alabama Power Co. under the national water power act; and we

Further hold that it would be the quintessence of legislative folly for the Government, after 10 years of investigation as to how best to free the United States from its dependence upon a foreign power for its supply of nitrogen for explosives, in the event of war, and after spending millions of dollars in the construction of the greatest nitrogen fixation plant in the world, to turn over the only power capable of successfully operating the nitrate plant to a corporation owned and controlled by foreigners.

We remind Congress that just as the Alabama Power Co. has returned evil for good to the people of Alabama, so it is the one corporation whose dealings with our country in the grim emergency of war was so shameless, selfish, and conscienceless that when its conduct was investigated by a select committee of Congress the minority members of this committee joined with the majority in denouncing its brazen and sordid betrayal of its duty to a war-beset nation.

Again affirming our utmost confidence in the ability and the desire of the President and the Congress of the United States and the committees of Congress to reach the soundest solution of the pending questions relating to the disposition of Muscle Shoals, we wish to express ourselves with regard to Mr. Henry Ford's proffered contract with the Government. The subject is of such vital interest to the people of Alabama that with greatest enthusiasm they have assembled in this meeting for the purpose of making this memorial:

Upon mature deliberation, we, as citizens, do express our firm conviction that it is to the best interest of the United States and to the interest of the people of Alabama that the offer of Henry Ford be accepted and concluded as a binding contract, and for the following among other reasons:

The acceptance of the Ford offer would insure the operation in Alabama of at least two great organizations engaged in the development and sale of hydroelectric energy, and would further insure competition in the distribution and sale of power throughout the territory which can be reached by transmission lines from the several power sites on the Tennessee River whose development is within the contemplation of the Ford offer.

The Ford offer insures the operation of United States nitrate plant No. 2 for a period of 100 years for the production of fertilizers in time of peace and for the production of nitrates for explosives in the event of war.

It insures to the millions of farmers throughout the United States, whose organizations have with unanimity indorsed the offer of Henry Ford, the continuous operation of this Government-built plant for the production of nitrate fertilizers in competition with the present producers of nitrates, by a company whose profits will be limited to 8 per cent, and in sufficient volume to have a controlling influence in fixing the price of nitrates and nitrate fertilizers for agricultural uses.

The Ford offer insures to the people of the United States the operation of nitrate plant No. 2 and its maintenance in such a constant state of readiness, with a trained force of operatives, as to guarantee to the Government and its citizens an independent, internal supply of nitrates, in exact accord with the announced intention of Congress as expressed in section 124 of the National Defense Act of 1916.

The Ford offer guarantees the construction of Dam No. 3, and makes provision for use by the people of the United States for purposes of navigation of one of the country's largest and most important rivers which is an integral part of the great Mississippi River waterway system.

In the consideration given to the various offers for Muscle Shoals much has been said about the profit and loss that would accrue to the Government of the United States and to its people from the acceptance or the rejection of the various offers. We respectfully urge that a plan which looks to a constant supply of cheap fertilizers for the farmers of the Nation through a period of 100 years, which insures to American industry during that period the use of nearly 1,000,000 horsepower of electric energy, which provides for the security of the Nation in the event of war, and which guarantees the navigability of one of the country's greatest rivers for all time. These continuing additions to the resources of the Nation, if it were possible to express them in terms of dollars, with interest at 4 per cent, will in the course of 100 years add so vastly to the wealth of the Nation and the prosperity of its people that any difference in the price of the nitrate plant as fixed in the several offers, and any difference between the purchase price offered and the estimated possible scrap value of the property, is dwarfed into insignificance.

With these considerations in view and having in mind the freedom of our own people from a galling and oppressive water-power monopoly, the freedom of the American farmer from a burdensome and grinding fertilizer monopoly, the opening of a great river to navigation, and the security of the country in the event of war, we urge the President and the Congress of the United States to accept the offer of Henry Ford, whom we verily believe seeks through his offer to dedicate to the American people and especially to the farmers of America his genius and his fortune.

We indorse the sentiment "America first" and Muscle Shoals first for Americans, and above all, for American farmers. Henry Ford is a typical American, who by his genius has done more for country people and country life than any other man of his time. A man who has the trust and confidence of the great masses of the common people, as evidenced by the resolutions adopted by every gathering of plain, ordinary Americans, including the representatives of 4,000,000 farmers, who have given voice to their sentiments in regard to his proposal for the development of Muscle Shoals.

We believe the issue in Congress is clearly drawn. It is a contest between the people and the interests which control the people's fertilizer and power resources.

On behalf of the army of the unemployed, in the interest of the great body of plain American citizens, in the name of millions of perplexed and burdened farmers, we beg our President and the Congress of the United States and its committees to promptly accept the offer of Henry Ford.

EDWARD DOTY.

This resolution was unanimously adopted.

B. M. ALLEN, *Chairman*.
C. E. JOHNSON, *Secretary*.

MARCH 1, 1922.

This resolution, I feel, represents the overwhelming sentiment of the people of Alabama. The statement by Governor Taylor before this committee is evidence that it represents the sentiment of the people of Tennessee. The unanimous indorsement of the Ford offer by our colleagues from the sister States of Mississippi, Louisiana, Georgia, the Carolinas, Florida, Arkansas, and Texas show that it represents the sentiment of these States. Allusion has been made to its strong indorsement by every farm organization in the country, South, East, West, and North. Likewise, you have before you a most informing statement by the vice president of the Mississippi Water Valley Association, in which without reservation he states that it represents the sentiment of the many States included in that great organization.

It is interesting, when we come to consider the proposal before you, to note that this was a project which Congress determined on prior to the war, to be primarily devoted to the Nation's use in war and to the farmers' use in peace; and it is not surprising that the farmers, for whom it was built and constructed to serve in peacetime, should now manifest great interest in the offer of one who, being possessed of financial ability and who enjoys their confidence, is willing to develop it along the lines that Congress declared should be its mission in peace.

The President, in recognition of the importance of agriculture, perhaps may have had this as well as other projects in mind in that remarkable address which he delivered on January 23 to the gathering of farmers in the city of Washington, and I beg to invite your attention to some striking excerpts from that address showing the present condition of agriculture and the importance, as recognized by the President, of taking definite action along constructive lines at this time:

"If agriculture is to hold its high place there must be the most liberal policy in extending its opportunity.

"There must be a new conception of the farmer's place in our social and economic scheme.

"I choose to call the vocation of the farmer the most useful, and it ought to be made one of the most attractive, among all lines of human effort.

"Concerning the grim reality of the present crisis in agriculture, there can be no differences of opinion among informed people.

"You men are thoroughly familiar with the distressing details of present conditions in the agricultural community. The whole country has an acute concern with the conditions and the problems which you are met to consider. It is a truly national interest and not entitled to be regarded as primarily the concern of either a class or a section.

"There is every reason for us to consider those permanent modifications of policy which may make relief permanent, may secure agriculture, so far as possible, against the danger that such conditions will arise again and place it as an industry in the firmest and most assured position for the future.

"Up to this time railroad construction, financing, and operation have been unscientific and devoid of proper consideration for the wider concerns of the community. To say this is simply to admit a fact which applies to practically every railroad system in the world. It is equally applicable to the railways of continental Europe. In whose development considerations of political and military availability have too far outweighed economic usefulness. In America we have too long neglected our waterways. We need a practical development of water resources for both transportation and power. Waterway improvement represents not only the possibility of expanding our transportation system, but also of producing hydroelectric power for its operation and for the activities of widely diffused industry."

This was a pleasing statement of what Congress in 1916 had the vision to see, and to seek, by the national defense act, to make some helpful provision for.

Is it surprising, then, when the war was over and the proclamation of peace issued, that the farmers should take account of the fact that here at Muscle Shoals is a plant, built with Government money, pursuant to the directions of Congress, as contained in this 1916 act, now practically complete and ready to serve the purpose which Congress intended. It has its power plant at Gorgas, on the Warrior, its transmission line from there to the nitrate plant, all built with Government money. There is now needed only an expenditure of some ten or twelve million dollars which Mr. Ford offers to supply to put Nitrate Plant No. 2 in condition where it will be prepared, from current supplied by the Gorgas steam plant, to begin the manufacture of fertilizers for the farmers. The farmers look upon it as their property, because Congress dedicated it to their use in the national defense act of 1916, and it is not surprising that they have begun to make an appraisal and survey of its possibilities.

Congress, at its last session, thought it would be unwise for the Government, without a definite policy of operation being first determined on, to expend further money in the completion of the power dams. Since that time, there has come an offer, and it stood as the only offer for more than six or seven months, discussed pro and con in all sections of the country. It was that offer, thus considered, thus dissected, that received the hearty approval of the farmers of the Nation, and of every business interest, except those in some way linked up with power or fertilizer companies, or like projects. So I think

the offer is now presented to the committee in a rather unusually strong way, and the farmers are asking for nothing more than present assistance from Congress for its cooperation in making a working concern of that plant, built with Government funds, pursuant to the direction of Congress to aid agriculture in peace.

And now, if I may, and I know the committee will understand that no discourtesy is intended, because I have the highest regard for every member of the committee, but in view of many, I fear, misleading press reports, I have hurriedly drafted some thoughts which I wish to leave with the committee for its consideration.

Whether fairly spoken or rightly understood, it is a fact that the Committee on Military Affairs, according to some press reports, makes the impression on those who discuss the Ford offer and the Warrior River phase of the case, that the committee shows no firmness, nay, I had almost said no courage, about the Warrior River case, and, after a fashion, is made to appear as throwing up its hands, since members of the committee are reported as perhaps urging that Mr. Ford and his representatives should in some way negotiate with the Alabama Power Co. and come to an understanding with the Alabama Power Co. about the Gorgas plant.

It must not be forgotten that Mr. Ford made no proposition to the Alabama Power Co., has no grounds upon which to approach the Alabama Power Co., has no business connected with the Government's Warrior River steam plant, or any other matters, to discuss with the Alabama Power Co., and even if Mr. Ford and his representatives were invited by the Alabama Power Co. to discuss the Warrior River case, consider, please, what a disadvantage Mr. Ford is at, when the impression goes out through the press that the Government is helpless. It is unfortunate for the committee to be placed in a position, whether rightly or not, I do not know, of not showing firmness and serving notice on the Alabama Power Co. that the Government can protect and will enforce its legal rights in the courts.

I respectfully submit, the public—the people of the country—will reasonably expect that Congress will find a way to straighten out the Warrior River difficulties and others—that the Congress will legislate its way out of the difficulties, if there be any.

Mr. PARKER. Is that a quotation from something you are reading, Mr. Oliver?

Mr. OLIVER. No; I prepared it myself.

Mr. PARKER. It is your own statement?

Mr. OLIVER. Yes, sir. I have referred, Mr. Parker, I will state, to impressions that I fear the public may have from newspaper reports.

Mr. PARKER. I heard the first statement, and I did not know whether the last statements were quotations or not.

Mr. FISHER. Mr. Oliver, has that statement you are reading from gone broadcast to the country—that the committee, perchance, has a lack of courage in handling the Ford offer?

Mr. OLIVER. I said that the press reports had carried, whether rightly or wrongly—perhaps there have been no such interviews, but, anyhow, in some papers there have been reported interviews, sometimes not mentioning by name the members of the committee, but saying that interviews with the committee show that perhaps nothing can be done, in view of the fact that we would apparently be tied up in litigation for years with the Alabama Power Co.

Mr. FISHER. Do I understand, then, that your inference is one obtained from newspaper reports and not from the hearings before the committee?

Mr. OLIVER. Absolutely. I thought I made that clear in my statement. I simply say that I fear that is the impression the public will have from these—I am willing to concede—unauthorized publications of reported interviews.

The following, taken from an editorial from Power, exactly expresses the thought I am trying to convey to you, and it is going to be also the expectation expressed by the country in regard to the Warrior River case:

"As concerns the legal aspects of the matter, Mr. Ford has every right to expect clear title to the properties should his proposition be accepted. The fact that officers of the Ordnance Department had a Government power plant and transmission line built on property belonging to a private company when under the war powers it could have exercised the right of purchase, and this without consultation with the Judge Advocate General's office, may be a matter for Congress to inquire into, but it places no obligation upon Mr. Ford or any other bidder. It is a matter for the Government to straighten out first."

Evidently they had gotten the impression that in some way the committee expected Mr. Ford to negotiate, and I do not think the committee has ever said that. I do not think you have said anything to justify that statement being made in the press, but, nevertheless, it is being said—and, I think, to the injustice of the committee. As Judge Almon says, I do not mean to charge that with reference to all press reports. Many of the press reports have been entirely fair and have not sought to attribute to the committee suggestions of this kind.

The Judge Advocate General having advised the committee that the Government can acquire the transmission rights of way, powerhouse sites, Government building sites at Gorgas, etc., I am sure that the committee will recommend to Congress the necessary legal steps to take in order to secure the Government's rights in such Government plant and transmission lines, and I am sure you will agree that it would be unfortunate and unjust to the committee for the public to get the impression that the committee shows lack of firmness or a disposition to throw up their hands in reference to the Gorgas plant.

Now, just let me say in that connection—

Mr. GARRETT. Before you leave that subject, have you a compilation of the press reports upon which you base that statement, except the article from Power?

Mr. OLIVER. One statement appeared in the press a few days ago quoting Mr. Kahn as indicating that he felt a commission would have to be appointed in view of the legal questions, and so on; and then another, I think, was reported either yesterday evening or this morning purporting to be an interview with Mr. Kahn in which he is quoted, in effect, that nothing can be done with the Ford offer, because it might involve a litigation of some three or four years, or something of that sort. Now, they doubtless have drawn a wrong inference from an interview with Mr. Kahn. I recognize he may feel that there is a legal question involved—

Mr. KEARNS. Would it not involve some three or four years of litigation?

Mr. OLIVER. I think not, Mr. Kearns. I think if the committee should recommend to Congress the acceptance of the offer, and Congress should by vote accept the offer and direct the condemnation of the Gorgas plant and the transmission line, you would see Mr. Ford in full control of it and operating nitrate plant No. 2 and turning out fertilizer in less than 15 months.

Mr. FISHER. That matter was suggested when you were before the committee and I asked you the question as to whether or not we could direct condemnation proceedings without first appropriating an amount of money to cover the cost of the land.

Mr. OLIVER. Yes.

Mr. FISHER. That question you were not certain about, and the matter is being investigated right now. Are you now prepared to state whether it is legal to proceed with a condemnation suit for the Gorgas plant—that property which the Government does not own there—without appropriating first some sum of money to cover the cost of the land?

Mr. OLIVER. I think you would have to appropriate some sum of money.

Mr. FISHER. That was just the question, and I ask you how much you thought ought to be appropriated.

Mr. OLIVER. In the case which Mr. Dent read to the committee the other day, and which seems to be an authority for every proposition I have assented in this case as to the Government's right to condemn, there is discussed that very point, and it is held that even though the amount appropriated was ascertained afterwards to be insufficient such fact is not fatal; so if you appropriated some reasonable amount and ordered condemnation, the condemnation proceedings could be begun at once. That very case answers fully the question, Mr. Fisher. I think.

Mr. FISHER. You recommend, then, without any consideration of the statement from the Secretary of War—and every officer, who had anything to do with the contract with the Alabama Power Co.—that we proceed to condemn without making any offer to settle the matter amicably prior to that time?

Mr. OLIVER. No; I have not said that. I simply said that some of these reports had created the impression that the negotiations, perhaps, ought to be made by Mr. Ford or his representatives; and that, so long as the Power Co. feels—from certain reported interviews—that the committee thinks the contract that they set up will prevent any action being taken, you can well understand how independent the Power Co. will continue to feel; and that is why I wanted to call the attention of the committee to the reports.

Mr. FISHER. I wonder if you are aware of the evidence which has been introduced before the committee about the intention of the War Department and the evidence of the officers, who handled the matter for the Government, and who stated that it was the intention, when they drew that contract, that the Alabama Power Co. was to buy the plant as a going concern and not as a salvaged concern?

Mr. OLIVER. Unquestionably.

Mr. FISHER. With that thought in mind, the Secretary thinks, and the other officers think, it is a moral obligation. Now, do you think we ought now, as a committee, to enter into negotiations for an amicable settlement with the Alabama Power Co. or do you think we ought to just order that direct condemnation proceedings be instituted?

Mr. OLIVER. I am very glad you ask the question, because it suggests to me that it is proper at this time to call your attention to the fact that it is but natural that some of the Ordnance officers in the War Department may feel very friendly to the claims and insistence of the Alabama Power Co., because, unfortunately, it was through them or some emergency officers in their bureau, that the Government was imposed upon in this contract? You gentlemen will recall how, without defense from any one, when this matter was before Congress last year, Mr. Graham, of Illinois, and others, condemned not only the Alabama Power Co. but also the officers of the Ordnance Department for their conduct in reference to this very contract? Read the speech of Senator Lenroot, in the Senate, and read the remarks of Senator Borah in reference thereto, in which he, after Senator Lenroot had explained to the Senate the character of the contract entered into by Ordnance officers with the Alabama Power Co., very properly inquired: "And are those officers still with the Government?"

Mr. FISHER. May I ask whether or not anything was done as a result of that investigation and condemnation toward straightening out the Government's rights at Gorgas?

Mr. OLIVER. I do not think anything has been done; but I feel sure——

Mr. FISHER (Interposing). Any resolutions introduced?

Mr. OLIVER. I think this committee will take action when they come to pass finally on this matter, and will direct what should be done; and it was for that purpose that I called attention to what might be a wrong impression, doing a great injustice to the committee and to Congress.

Mr. PARKER. That is just what I want to speak of.

Mr. OLIVER. Yes.

Mr. PARKER. You call attention to the impression that may go forth if we take one action or another. You do not mean to say we ought to consider for a moment any such impression in doing exactly what we think right about this case.

Mr. OLIVER. I feel sure the committee will do what it thinks is right.

Mr. PARKER. Then I do not think it worth while to suggest then that we may be subject to a newspaper attack.

Mr. OLIVER. I submit that I have my own opinion about that.

Mr. PARKER. Your own opinion.

Mr. OLIVER. And I think you will agree with my position when you understand my purpose in calling the attention of the committee to that fact.

Mr. PARKER. It is a sort of threat.

Mr. OLIVER. No; it is no threat in the slightest. In reply to Mr. Fisher's questions, that the Ordnance officers claim this and that, I have called your attention to what Congress thought about it, and let me call your attention to what members of your committee have said about it. Take Mr. Miller, for instance.

Mr. FISHER. My suggestion was not that we ought to abide by what was said, but we ought to investigate it further. We have not had Colonel Joyes before us, and Colonel Joyes is the man who was at the head of that division.

Mr. OLIVER. Yes.

The CHAIRMAN. I have made an arrangement to have him before us on Friday morning. I have already been working at that, Mr. Fisher.

Mr. OLIVER. And my recollection is that Colonel Joyes was perhaps the officer that Senator Lenroot had in mind when he was discussing the question and the inquiry of Senator Borah was made, to which I have referred. Reverting to Mr. Miller's statement here on page 668, he said to Mr. Martin, president of the Alabama Power Co.:

"I see very plainly what the contract is, but I have been wondering if there is any other human being that would put a dollar into an enterprise on

such a basis as the United States put its money in with you. Can you conceive of any institution in the world, or can you conceive of the United States, except in the extremity of war, making such a contract?

"And I am afraid, Mr. Martin, that I am forced to believe that you took advantage of the Government in its extremity of war."

And further:

"And I say, sir, that it looks to me as if the Alabama Power Co. had ingeniously interwoven the Government's interest along with yours to such an extent that they never could be segregated and that you would be the only man that could become the purchaser."

Further:

"It is plain that they got the power and I see the end of the horn the Government is coming out in thing thing, too, notwithstanding the great patriotism that you suggested to the committee his morning, Mr. Martin."

And, Mr. Miller was but voicing the sentiment of Congress, as we understood it, and as it was expressed on the floor of both the House and the Senate last year. That is why I say that we, and I know the committee do not want the public to have the impression that the committee is having great trouble in even giving further consideration to the Ford offer, so long as the Alabama Power Co. stands up and threatens the Government with a lawsuit.

Mr. KEARNS. Mr. Oliver, this contract does not differ from thousands of other contracts made with the Government, does it?

Mr. OLIVER. I do not think you will find any other contract like this, for this reason, Mr. Kearns: Here was a selection of the site of a national project at Muscle Shoals—

Mr. KEARNS (interposing). I understand that, but my point is—

Mr. OLIVER (continuing). And the very company that Congress, in the act of 1916 had served this notice on, "the Government does not want you and will have nothing to do with you in building its nitrate plants,"—the Alabama Power Co., was responsible for the proviso that was put in section 124 of the National Defense Act of 1916. Yet, with that in mind, we find them in conjunction with some emergency officers, or perhaps some regular officers of the Ordnance Department, making an agreement looking to the acquirement of large expenditures by the Government, for what purpose? Expenditures looking to the supplying of power to this Muscle Shoals project, which in peace and in war, was to be devoted to a public purpose. I say that you will find no contract during all the war, where a party, served with notice as was the Alabama Power Co. in 1916, seeking in a selfish way, as indicated in the questions by this committee to the president of that company, to have the Government's money so expended at its plant and on its property that it could never be separated therefrom, and the Alabama Co. would thus become the only possible purchaser.

Mr. KEARNS. Is the Government so weak that a bunch of men can take that advantage of it?

Mr. OLIVER. Absolutely not, and I do not believe a single member of this committee thinks so.

Mr. KEARNS. The Government certainly has been weak in all the contracts made practically during the war.

Mr. OLIVER. Unfortunately the contention of the Alabama Power Co. has been that the Government is so weak that it can not help itself now. I do not believe that you and other Members of Congress will fail to find a way in which the Government, if that property be needed in the operation of a great national project can acquire it. We are not helpless, and it would be an injustice to Congress and to this committee, to have the impression go out that any Member of Congress or any committee of Congress felt that the claims of the Alabama Power Co., made under a contract, characterized by every member that ever discussed it, as unconscionable, overbearing, and void, could prevent the consideration of an offer for the plant, and I do not believe it will.

Mr. STOLL. Is the fraud that vitiates the contract apparent on its face?

Mr. OLIVER. I think section 22 answers it. That section is a complete answer to the claim of the Alabama Power Co. that any one had authority on the part of the Government from Congress to bind the Government in the alleged sale of the plant at Gorgas. I think you, Mr. Stoll, very clearly, by your questions to Mr. Dent, the attorney of the company, demonstrated that point beyond question.

Now, gentlemen, I had not intended taking up this much time, and in conclusion I simply wish to say I recognize that this is a matter of vast importance

to the Nation. I question whether you can find any question measuring up to it in importance from the farmers' standpoint that has been presented to Congress since the war. Fortunately it is a question that in no sense concerns alone any section. It in no sense has ever at any time been considered as partisan, and I know that in approaching the rightful solution of this problem and in seeking to provide for the future operation of this plant, in accordance with the direction of Congress, as expressed in the 1916 national defense act, this committee will find a way whereby it can be beneficially used to serve those for whom it was primarily intended to serve in times of peace.

STATEMENT OF HON. EDWARD B. ALMON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ALABAMA.

Mr. ALMON. Mr. Chairman and gentlemen of the committee, during the recent World War the Government constructed at Muscle Shoals, in the Tennessee River, in Northern Alabama, two nitrate plants, known as Nos. 1 and 2, for the fixation of atmospheric nitrogen to be used for the manufacture of explosives for war purposes and fertilizer in peace times. The war-time cost of these plants amounted to a total of \$85,423,078.73, including the Gorgas steam plant and the Wuco rock quarry, which is about twice the amount of cost of construction in normal peace times. In addition to this, about \$17,000,000 has been expended on the Dam No. 2 at Muscle Shoals, known as Wilson Dam. It was about 30 per cent complete when work was suspended last May, the appropriation of \$10,000,000 to continue work on the dam having been defeated by 11 votes in the House on February 25, 1921. The dam is a part of this development and is to furnish the power to operate the plants.

At the small nitrate plant, No. 1, the synthetic process of the General Chemical Co. which had not been developed on a commercial basis, was used. The Haber process was not available in this country at that time, but is now and is being used successfully, I am informed, in a small plant at Syracuse, N. Y.

Plant No. 1 was an experimental plant. Certain parts of it were not a success. The War Department has decided not to ask Congress for the large amount of money that would be necessary to make it a success but has recommended that it be salvaged.

The large plant, No. 2, at Muscle Shoals uses the cyanamid process of the American Cyanamid Co. The cyanamid process for the fixation of atmospheric nitrogen is one of the oldest and best. It is being used extensively and successfully in the European countries, and was during and before the World War. Plant No. 2 was built in about eight months, being completed just as the war ended. It is 100 per cent in quantity and quality of production contracted for, viz, 110,000 tons ammonium nitrate annually, as has been demonstrated by a number of Government tests. Both plants are now being kept in a stand-by condition.

The development at Muscle Shoals is not local; it is a great national project and is nation-wide in the uses for which it was intended. This development, as planned in the Ford offer, will be of great benefit to the entire country. Muscle Shoals was selected for this development on account of its natural advantages, namely, within the safety zone prescribed by the military authorities; the greatest water power east of the Mississippi River; in close proximity to the phosphate beds, coal, coke, limestone rock, and all other raw materials in inexhaustible quantities needed in the manufacture of munitions and fertilizer; climatic conditions ideal; central point for the distribution of fertilizer, transportation facilities good both by rail and water.

This committee in 1916 originated the law which resulted in this development. At the earnest solicitation of those who were interested in the question of national defense and agriculture, provision was made in section 124 of the national defense act, approved June 6, 1916, for the construction of one or more nitrogen plants to be used for the manufacture of explosives in times of war and fertilizer in peace time, to be operated by steam or water power, one or both. As a result of that legislation the Government, through its authorized representatives, made these improvements at Muscle Shoals. In the consideration of this question it is most important that you bear in mind that these nitrate plants at Muscle Shoals and the water-power development which has been commenced was just as much intended for the production of cheaper and better fertilizer for the farmers in times of peace as for the manufacture of

explosives in times of war. This was clearly the expressed intention of Congress when their construction was authorized.

After our experiences during the World War everybody agrees that this country should never again be dependent upon a foreign market for a supply of nitrogen in times of emergency, and all agree that nitrate plant No. 2 at Muscle Shoals should be preserved and maintained as a part of our national defense.

Soon after the beginning of the present administration, Secretary of War Weeks announced that he would not recommend to Congress the appropriation of funds with which to complete Muscle Shoals Dam No. 2, known as the Wilson Dam, unless he was first assured that there would be a market for the power developed by its completion that would justify the additional expenditure. In order to secure this information the Secretary of War requested the Chief of Engineers of the War Department to ascertain from water-power companies and others who might be interested in using a large amount of water power if they would be interested in taking the power if the dam was finished.

As a result the Chief of Engineers received several replies—one from the Southern Power Co., in which it was not only stated that they would not be interested in taking the power but strongly condemned the project, declaring that it was impracticable and worthless, and recommended and advised against the completion of the development. Muscle Shoals has become very valuable in the estimation of the Southern Power Co. and other water power and fertilizer interests since Mr. Ford made his offer. Why this sudden change of heart?

As a further result of the policy of Secretary of War Weeks, an offer was made by Henry Ford which made provision not only for the completion of the Wilson Dam but for the construction of the other dam, No. 3, thereby developing all the water power at Muscle Shoals and removing all obstruction to navigation, and also providing for the operation of the large nitrate plant, No. 2, for the manufacture of fertilizer.

The Ford offer was made on the 8th day of July, 1921. Negotiations were conducted between Mr. Ford and the Secretary of War for several months, and no other offers were made until after the Ford offer was sent to Congress, February 2, 1922.

While negotiations were pending between Mr. Ford and the Secretary of War, the president of the Alabama Power Co. announced, through the press and otherwise, that the Alabama Power Co. would not submit an offer for the Muscle Shoals property, but after the hearings by this committee on the Ford offer had commenced, and when it became apparent that the Ford offer would in all probability be accepted by Congress, the Alabama Power Co. submitted an offer on the 15th of February, 1922.

The Secretary of War announced that he was without authority to dispose of this property and sent both of the offers to Congress with his comments, but without recommendations, and they were referred to the Agricultural Committee of the Senate and this, the Military Affairs Committee of the House.

Extensive hearings have been held before this committee during the past three weeks, and have attracted nation-wide attention. The hearings are now about completed. Both committees are planning to make a trip of inspection to Muscle Shoals at an early date. You have been very patient. You have given all a hearing who desired to be heard. I have attended all of the hearings and have made a careful study and analysis of all of the offers for Muscle Shoals. My purpose in addressing you is to show you, if I can, that it will be to the interest of the Government and the public to recommend the acceptance of the offer of Henry Ford and reject that of the Alabama Power Co. I shall first discuss the offer of Henry Ford and then the offer of the Alabama Power Co.

Mr. Ford's offer of July 8, 1921, as modified on January 11, 1922, was put in contract form by the Judge Advocate General, and is made Exhibit C on page 14 of House Document No. 167.

Three modifications, as I remember, have since been agreed to by Mr. Ford to clarify some parts of the agreement, namely, (1) that his company, provided for in the first section of the agreement, is to begin with at least \$10,000,000 paid-in capital stock; (2) that section 14 be modified so as to make it clear that nitrate plant No. 2 is to be operated to its full capacity during the entire period of the lease for the manufacture of fertilizer; (3) that the board, nominated by the farmers' organizations and appointed by the President, as provided for in section 15 of the agreement, shall control the sale and distribution of the fertilizer manufactured at plant No. 2, so that it will be sold direct to the farmers at not more than 8 per cent over and above the actual cost of production. [Reading:]

"Mr. Ford's proposal consists of two parts: (1) To lease the dams for 100 years, and (2) to purchase the nitrate plants and accessories.

PART 1—OFFER TO LEASE THE DAMS.

Provisions of offer.

1. Mr. Ford agrees to pay \$55,000 annually for the maintenance of dams, locks, etc., making a total payment in 100 years of-----	\$5,500,000
2. He agrees to pay interest at 4 per cent on whatever the cost may be for completing both dams. If this amounts to \$42,000,000 (the estimate of Mr. Ford's engineers), the total in 100 years under Mr. Ford's plan of payments will amount to-----	161,040,000
3. He agrees to a plan of amortization sufficient to retire \$49,000,000 in 100 years-----	49,000,000

Total payments to the Government under Ford offer during 100-year-lease period-----	215,540,000
---	-------------

Cost of dams (expended and proposed).

There has been expended to date in building Dam No. 2, about-----	17,000,000
Cost of completing Dam No. 2-----	\$23,000,000
Cost of building Dam No. 3-----	17,000,000
	<u>40,000,000</u>

Total Government investment in Muscle Shoals dams and hydroelectric plants will amount to a total of-----	57,000,000
---	------------

"Charges to navigation: Deducting the \$49,000,000 which Mr. Ford repays from the \$57,000,000 total cost, leaves \$8,000,000 unrefunded, which is less than the amount stated by the United States engineers as chargeable to navigation, their prewar estimate being \$8,575,000. (See H. Doc. 20, 63d Cong., 2d sess., p. 4, par. 6.)

"The United States engineers have more than once recommended that \$8,575,000 should be charged to the navigation improvement of the Muscle Shoals stretch of the Tennessee River under the very plans for join navigation and power improvement now proposed.

"Earnings from Government peace-time investments compared with Ford offer: To meet the terms of the Ford offer and produce a proportionate return to the Government, the Reclamation Service, representing a Government net investment of \$125,870,830, would have to show an annual gross income of \$10,180,132, instead of \$4,191,844, which it now shows. The Panama Canal, representing an investment of \$380,554,949, would have to earn \$32,450,886 gross revenue, whereas last year's total revenues were only \$12,040,117. (Based on 1921 report.)

"PART TWO—OFFER TO PURCHASE NITRATE PLANTS AND ACCESSORIES.

"Provisions of offer: Mr. Ford offers to purchase nitrate plants Nos. 1 and 2, Waco quarry, and the Gorgas steam plant and its transmission line for \$5,000,000. He also offers to maintain nitrate plant No. 2 in a state of readiness to be promptly operated in the manufacture of materials necessary in time of war for the production of explosives. Thus securing the benefit of its use for the purpose for which the plant was originally planned. The Government, therefore, retains every advantage of the nitrate plant in time of war, but pays nothing for the maintenance of the nitrate property in times of peace.

Salvage to Government from war-time investments compared with Ford offer.

	Cost of property.	Salvage received.	Per cent of cost salvaged.
Government property sold:			
Muscle Shoals nitrate plants-----	\$85,423,078.73	\$5,000,000.00	5.85
Old Hickory powder plant-----	80,000,000.00	3,500,000.00	4.25
Wooden ships, United States Shipping Board.....each..	800,000.00	5,000.00	0.63

"On the basis of the price received for the wooden ships that were sold, Mr. Ford would have offered only \$567,000 instead of \$5,000,000 for the nitrate plants.

"Annual cash saving to Government by acceptance of Ford offer: The Ford offer when accepted will stop the following annual cash expenditures:

1. Guarding an maintaining nitrate plants and accessories (fiscal year ending June 30, 1921), depreciation omitted.....	\$310,042.44
2. Guarding and maintaining uncompleted work at Dam No. 2 representing a yearly expenditure of.....	384,000.00
3. Maintaining Muscle Shoals Canal, average annual cost.....	53,079.00

Total annual cash saving..... 747,121.44

This is interest at 4 per cent on \$18,678,000.

Cost to Government of the Delay in Accepting Ford Offer.

Average annual cash return to the Government under Ford offer.....	\$2,155,400.00
Annual cash expenditures saved at Muscle Shoals by Ford offer.....	747,121.00

Total annual loss to Government by delay..... 2,902,521.00

Average monthly loss..... 241,877.00

Loss since Ford's offer was made 8 months ago..... 1,935,016.00

"The cost of the delay in accepting Mr. Ford's offer, as shown above, has already amounted to 1,935,016, and on the cost basis of the last fiscal year the cost is piling up at the rate of \$8,062.50 per day.

As shown from the foregoing table of salvage to the Government from war-time investments, the Ford offer for the nitrate plants at Muscle Shoals will give the Government the highest rate of salvage it will have obtained from either of the war-time expenditures included in that list. The military cantonments constructed during the war which have thus far been salvaged have brought practically nothing. Many of them have been completely abandoned and their buildings are going to waste, for the reason that they are not even worth the cost of "scrapping."

When the fact is taken into consideration that Mr. Ford's offer for the nitrate plants imposes upon him the obligation to keep the plants in reserve, at his expense, for the use of the Government in time of war for the production of explosives, his bid looms large in comparison with the prices obtained for the other war-time investments, from which no further returns will be secured. So there has not been, and can not be, any just criticism of the amount offered by Mr. Ford for the nitrate plants.

Mr. Ford not only offers a very fair price for the nitrate plants, but agrees to keep nitrate plant No. 2 at Muscle Shoals in an up-to-date running condition and available to the Government without cost if it should ever be needed for military purposes and the manufacture of munitions. It is now in a stand-by condition, expensive to guard and maintain. The older it grows, the more expensive the maintenance charges will be. With the very best care it would rust out and greatly deteriorate in value. The fixation of atmospheric nitrogen is a comparatively new art, and it will be improved from time to time, and in order for this plant to keep pace with the progress of the art and be an up-to-date, going concern in the event of a military emergency it must be operated in peace time.

Besides the act of Congress making provision for its construction provided that it should be operated in peace time for the manufacture of fertilizer. So the acceptance of the Ford offer preserves this plant as a military plant and at the same time makes provision for its operation by private capital in peace time for the manufacture of fertilizer. The maintenance of the plant by the Ford Co., relieving the Government of all expense and keeping it in an up-to-date running condition, is of inestimable value and would save the Government many millions of dollars, besides the advantages to agriculture, the basic industry on which the success and prosperity of every other business depends.

Mr. Ford further agrees to operate nitrate plant No. 2 during the entire period of the lease to its full capacity in the manufacture of commercial fertilizer and sell direct to the farmers at a price not to exceed 8 per cent of the

actual cost of production, through a board nominated by the farmers' organizations and appointed by the President.

The present capacity of the plant would produce about 2,000,000 tons of fertilizer, which is about 30 per cent of the amount of fertilizer consumed in normal times. It has been clearly shown that with cheap water power the Ford Co. can make fertilizer at about one-half of the present price. The Nation's fertilizer bill is now nearly \$250,000,000 annually. Suppose, for the sake of argument, that the operation of the Muscle Shoals plant should only result in a 20 per cent reduction in prices. That would amount to \$50,000,000 a year saving to the farmers, and this amount for 100 years out on compound interest—as the opponents of the Ford offer have undertaken to do in claiming what Mr. Ford would make from the Government in compounding interest—would be over \$5,000,000,000, saving to the farmers of the country.

Mr. Ford's agreement requires his company to be responsible for the upkeep and repair of the power houses and equipment at his own expense; to pay the Government \$55,000 annually for the upkeep of the dams and locks which will save the Government the expense of maintaining the present imperfect facilities for navigation at Muscle Shoals, amounting to from \$35,000 to \$85,000 per annum; also to pay as an annual rental 4 per cent on the actual cost of the completion of the dams; and in addition to all this, create a sinking fund by paying to the Government \$43,746 annually, which, if invested by the Government at 4 per cent interest, would amount to \$49,071,935 at the end of the lease; if invested at 4½ per cent would amount to \$58,570,003.

The Secretary of War, in his report to Congress discussing this part of the Ford offer (H. Doc. 167, p. 7), made the following statement:

"Should the dams be constructed at a cost of not to exceed \$42,000,000, as estimated by Mr. Ford's engineers, there would be left to apply on the investment of the Government heretofore made whatever the amortization payments would produce in excess of the \$42,000,000. If the amortization fund should be invested continuously at 4 per cent there would be at least \$7,000,000 to be thus applied, but should it be invested at a greater rate of interest the amount would be increased as shown by the following table: "

Amount retired by Mr. Ford's sinking fund at various rates of interest, compounded semiannually.

Account of—	Semi-annual payments.	Life of fund (years).	Amount retired at following interest rates:				
			4 per cent.	4½ per cent.	4¾ per cent.	5 per cent.	6 per cent.
Dam No. 2.....	\$19,868	94	\$40,919,798	\$48,783,949	\$58,319,350	\$63,718,087	\$176,030,810
Dam No. 3.....	3,505	97	8,153,137	9,786,054	11,780,690	17,150,545	37,108,890
Total.....			49,071,935	58,570,003	70,100,040	100,868,632	213,139,700

NOTE.—Payments are to be made into sinking fund semiannually at the beginning of each semiannual interest period. This sinking (or retirement) fund has nothing to do with Mr. Ford's interest payments, but represents a separate fund to be invested at the highest interest rate obtainable for the purpose of returning to the Government within the lease period the largest amount possible, with the above semi-annual payments, consistent with safe investment.

The Secretary of War found no fault with this part of the Ford offer, nor do I remember to have heard of any criticism of it by any member of this committee.

A group of powerful interests is flooding Congress and the country with all kinds of propaganda filled with false and misleading statements about Mr. Ford's plans and purposes. One very elaborate publication was issued purporting to tell the truth about Muscle Shoals, and a large part of it was an attempt to show that Mr. Ford would devote the Muscle Shoals plant to the manufacture of sulphate of ammonia, and this product would have but little effect upon the cost of fertilizer. Mr. Ford does not intend to produce sulphate of ammonia as a nitrogen fertilizer compound. He will, of course, produce ammonia by the air nitrogen fixation process and mix ammonia with phosphoric acid, produced electrically from phosphate rock obtained nearby, thus making ammonia phosphate.

The same publication states the cost of completing Dam No. 2 would be \$23,000,000, and of Dam No. 3, \$24,000,000, or \$57,000,000 for the completion

of the dams. The facts are that experienced and responsible contractors have offered to complete Dam No. 2 for \$23,000,000 and build Dam No. 3 for \$17,000,000, making a total of \$40,000,000 for both. The estimate of Mr. Ford's engineers is \$42,000,000. The outside estimates of the engineers of the War Department is about \$48,000,000, and they admit that it may be considerably less.

Mr. Ford, according to his offer, is to construct the dams under the direction of the Chief of Engineers of the War Department. It will be to his interest to do it as cheaply as he can, as he is to pay an annual rental of 4 per cent on what it costs.

Some of those who are opposing the Ford offer have criticized the 4 per cent on what it costs to complete the dams as annual rental for the water power. To show that there is no cause for such criticism I submit the following table of Government loans now outstanding in the shape of bond issues:

	Per cent.
Consols, 1930, \$500,724,050.....	2
Panamas, 1916-1936, \$48,954,180.....	2
Panamas, 1918-1938, \$25,947,400.....	2
Panamas, 1961, \$50,000,000.....	3
Postal savings, \$11,774,020.....	2½
Conversion, 1946-1947, \$28,894,500.....	3
War issues:	
Liberty, 1932-1947, \$1,410,074,050.....	3½
Liberty, 1932-1947, \$15,130,900.....	4
Liberty, 1927-1947, \$66,962,900.....	4
Victory, 1923, \$497,915,100.....	3½

From the above table it will be seen that bond issues prior to the recent war issues were on a basis of from 2 to 3 per cent, and the average was under 2½ per cent. It also shows that a number of war issues were at 4 per cent and less. It was only toward the end of the war and in the most serious stress of the war that some bonds were issued at a rate of 4½ to 4¾ per cent.

In normal times our Government bonds have been issued for much less than 4 per cent, so it is fair to assume that the 4 per cent which Mr. Ford is to pay as annual rental for a 100-year period will be above the average rate that will prevail during that time.

When the Ford offer is accepted Congress, instead of appropriating money from time to time to complete the dams, could provide for the issuance of 4 per cent bonds, which would be easily negotiated. The interest paid by the Ford Co. as rental for the power would pay the interest on the bonds and the amortization plan would liquidate the bonds, and in this way the completion of the dams would not cost the Government anything.

There has been some criticism of that part of the Ford offer which provides for a lease of the water power for 100 years. Practically all of the water-power developments up to this time provide for a 99-year lease period. The criticism of this feature of the offer seems to be due to a provision in the general water-power law approved June 10, 1920, which provides for 50-year leases with rights of renewal.

There should be no objection to the Ford offer on account of the 100-year lease period; first, for the reason that the dams at Muscle Shoals were approved by the War Department and work commenced on the construction of one of them before the enactment of the general water-power law; second, because the development at Muscle Shoals is in a class to itself. There is nothing else like it. Besides the dams are being built by the Government and will be the property of the Government, and not a lessee.

There is a fall of 134 feet in 36½ miles. The flow of the river is 72,000 second-feet at low water and 490,000 second feet at high water. The Wilson Dam is to be 100 feet high and 4,425 feet long; Dam No. 3, 14 miles up the river, is to be 40 feet high and 6,725 feet in length; the two together developing about 800,000 horsepower—more than has ever been developed at any one place in the world.

There is a present market for only a small part of this power. It will require a number of years to secure a market for it all. Mr. Ford is not willing to take over this water power under a lease for less than 100 years. He claims that on accounts of the heavy expenses and the time required to provide a use and market for this power that a lease for less than that length of time would be unreasonable.

General Beach, Chief of Engineers of the War Department, told you that he thought 100-year lease in this case was proper and reasonable and gave his reasons. Many others are of the same opinion. The Government and taxpayers are fully protected during the entire period of the lease, so there is no valid objection to the 100-year lease.

The chairman of this committee, after hearing this feature of the lease discussed by a number of witnesses, announced in an open meeting of the committee that he saw no objection to the 100-year lease period in the Ford offer. The fact that the general water-power law provides for a 50-year lease, with rights of renewal, is no reason why this lease should not be for 100 years, for the reasons I have stated.

The general water-power law, as we all know, was a compromise measure in many respects and has been very disappointing in results, as there has been but little water-power development since that time. There were great differences of opinion among the Members of both Houses of Congress as to what the lease period should be. A great many favored a 100-year lease period.

Someone has suggested that section 17 of the Ford offer might have the effect of giving the Ford Co., its successors or assigns, a perpetual right to at least a part of the power from these dams. To show that such is not the case I refer you to that section, which is as follows:

"17. In order that said company may be supplied with electric power and the farmers with fertilizers after the termination of the said 100-year leases, should the United States elect not to operate said power plants but determine to lease or dispose of same, the company shall have the preferred right to negotiate with the United States for such lease or purchase and upon such terms as may then be agreed upon. If the said leases are not renewed or the property covered thereby is not sold to said company, its successors or assigns, any operation or disposal thereof shall not deprive the company, its successors or assigns, of the right to be supplied with electric power at reasonable rates and in amount equal to its needs, but not in excess of the average amount used by it annually during the previous 10 years."

Secretary of War Weeks made no objection to this section and does not construe it as has been suggested. Secretary Weeks has this to say about that section (House Doc. No. 167, p. 8):

"This paragraph does not bind the United States to a renewal of the lease and is in no way an attempt to control the policy of Congress beyond the 100-year period of the present lease, except to preserve to Mr. Ford's company 'the preferred right to negotiate with the United States for such lease or purchase and upon such terms as may then be agreed upon.' It also attempts to preserve for the company a right to be supplied with electric power for a period not stated, 'at reasonable rates' in the event the power plants are operated or disposed of to some one other than the company."

If the plants of the Ford Co., or its successors or its assigns, depending upon this power, should be denied the necessary power for operation at the end of the lease it would amount to a confiscation of their plants. The provision is reasonable and proper.

The building of these dams as provided in the Ford offer will not only develop this great water power which has been going to waste for all time, but will open up cheap water transportation on the upper Tennessee River, which runs through a vast area rich in great deposits of coal, iron ore, marble, slate, phosphate rock, zinc, and immense forests of hardwood timber, all of which is needed in other parts of the country. With this cheap water transportation all these materials which are now locked up for want of transportation facilities can be transported in the Ohio River, thence into the Mississippi River, and to all the markets, both domestic and foreign.

The Air Nitrates Corporation, a subsidiary of the American Cyanamide Co., with a capital stock of \$1,000, constructed nitrate plant No. 2 at a cost of nearly \$70,000,000 on a cost-plus percentage contract and collected a fee of \$1,500,000 in addition. This company claims that it has a right to purchase nitrate plant No. 2 under its contract with the Government. There was no authority for the execution of a contract by the Secretary of War, or any other official, at the time of the execution of the contract, December 1, 1917, obligating the Government to sell this plant to the Air Nitrates Corporation and that part of the contract is null and void. No one has furnished the committee with any authority to support such a contention. A representative of this company did appear before this committee and claim that his company had a moral, if not a legal, right to purchase plant No. 2. The nature of the contract and

amount which has been paid by the Government to this company clearly shows that there is not even a moral obligation on the part of the Government. This representative also stated that his company did not care to buy the plant and in addition was not financially able to purchase it. So this so-called "option to purchase" in no way interferes with the acceptance of the Ford offer.

The Judge Advocate General of the War Department, after a careful consideration of this question, rendered an opinion declaring this option void, and that in his opinion there was not even a moral obligation on the part of the Government to sell the plant to the Air Nitrates Corporation.

The Alabama Power Co. also claims an option to purchase the Gorgas plant and transmission line from Gorgas, Ala., to Muscle Shoals. The Judge Advocate General has also decided that this is void. Attorneys for the Alabama Power Co. and my colleague, Mr. Oliver, have discussed at length every feature of the contract and transactions between the Government and the Alabama Power Co. in connection with the Gorgas plant and transmission line from Gorgas to Muscle Shoals, and I deem it unnecessary to undertake to add anything to what has been said. I take for granted that you will act upon the opinion of the Judge Advocate General.

I hope that I have shown that the acceptance of the Ford offer will not cost the Government anything in the end. But, even if it should lose some interest during the construction period, in making provision for the manufacture of a cheaper and high-grade concentrated fertilizer for the farmers in those sections of the country where fertilizer is absolutely necessary, it would not compare with the amounts which have been appropriated by Congress for the reclamation of arid lands in our Western States.

The Government reclamation of the arid West is both a paternal and an internal improvement which is essentially a cooperative arrangement between the Government and private parties. The summary of appropriations made by Congress for western land irrigation to 1915 amounts to \$116,824,894.82, and of that amount there was an authorized Government bond issue of \$20,000,000, and none of these appropriations in aid of irrigation improvements in the West returns any interest payment to the Government.

One of the most prominent examples of the reclamation projects of the West is the case of the Roosevelt Dam, 79 miles northwest of Phoenix, Ariz., this dam being 264 feet high and 235 feet long, originally estimated to cost \$5,000,000, but the total cost of this reservoir, dam, power system, diversion works, canals, drilling, etc., to July 1, 1913, was \$11,193,687. The money was loaned to them to aid in irrigating their lands without interest for at least 20 years, and in some places it goes on into a revolving fund year after year without any interest to the Government.

The Government has very properly assisted and encouraged the western farmers to water their arid lands. For the same reason the Government should at least give Mr. Ford an opportunity to aid the farmers who need fertilizer.

Other countries are using their air-nitrogen plants successfully for the manufacture of fertilizer and are making most valuable contributions to agriculture in this way. Our country is making progress along all other lines; why not this?

What is the cause of this opposition? It has been conclusively shown during this hearing that the Ford Co. would produce fertilizer by reason of the cheap water power and the Ford Co.'s business methods at from one-third to one-half cheaper than the present prices of fertilizer.

I believe that everyone who has studied the question will agree that Dr. Milton Whitney, Chief of the Bureau of Soils, and an expert on matters pertaining to fertilizer, was right when he said that the present policy pertaining to the manufacture and distribution of fertilizer was wrong and should be remedied.

I have no doubt but that this committee has concluded by this time that the manufacture of fertilizer by the Ford Co. at Muscle Shoals would revolutionize the fertilizer business in this country by reason of the quality and price of the fertilizer produced.

When the war ended it was costing the Government \$1,000,000 an hour. One reason was that those who sold us nitrates and explosives of different kinds charged any price they pleased, while our boys were fighting and dying in the trenches in France. We were helpless; had to get our nitrates from Chile.

We are dependent upon Chilean nitrate for nitrogen for war and fertilizer purposes. We have paid out for Chilean nitrate since 1867 the enormous

sum of \$821,183,624.12. In addition to this large sum the people of the United States, principally the farmers, have paid to Chile an export duty of \$11.87 per ton on Chilean nitrates, which has amounted to \$163,647,780.63 since 1867.

Why should the farmers of the United States continue to pay tribute to a foreign country to secure nitrogen for fertilizer purposes when there is over 21,000,000 tons of nitrogen in the air over every square mile, when we have one of the largest and best nitrogen plants in the world, equipped and planned to take the nitrogen from the air and convert it into a solid substance by means of the patented process for the fixation of atmospheric nitrogen, and thereby lower the prices and keep our money at home. We not only pay a high price for the Chilean nitrate and an export tax, but high ocean freight rates for four or five thousand miles to the nearest American port, and then high railroad freight rates to the station nearest to the farmer, then usually a long-distance haul over muddy roads to the farm where it is to be used. After all of this expense it contains only about 16 per cent of nitrogen; the balance is of no value as a plant food and is what is usually called filler. Mr. Ford proposes to make a concentrated fertilizer and sell it to the farmer and let him do the mixing if he desires, and save all this expense.

The American representative of the Chilean Nitrate Corporation testified before the Graham Committee on War Expenditures that the price of Chilean nitrate or nitrate of soda, as it is commonly called, was fixed by the Chilean Nitrate Commission in London. He also stated that the by-product coke-oven companies in the United States placed the same price on their ammonium sulphate in proportion to nitrogen contents. He further stated that in his opinion if the Muscle Shoals plant should be operated for the manufacture of fertilizer that the Chilean Nitrate Corporation would have to sell Chilean nitrate at the same price that it would be sold for at Muscle Shoals. So it is easy to understand why the Chilean Nitrate Corporation should oppose the Ford offer. It has no competition at this time and is interested in keeping down competition.

The acceptance of the Ford offer will make us independent of this foreign power both for fertilizer and war purposes. The quality of fertilizer we are now using is inferior and the prices prohibitive in proportion to the present prices of farm products. We have been diligent in our effort to enact legislation in the interest of the farmers. We have secured large amounts of national aid to rural roads; we have provided a system of farm-loan banks for the purpose of enabling the farmers to secure long-time loans at a low rate of interest; we have revived the activities of the War Finance Corporation in order to assist the farmers in marketing their crops; we have recently enacted a cooperative marketing bill. We now have an opportunity to do something further by accepting the Ford offer and protecting the American farmer from further imposition by these foreign and domestic monopolies who fix and manipulate the prices of fertilizer at their will without any regard to the price of farm products or the financial ability of the American farmer.

The American Cyanamid Co. and the Virginia Chemical Co., the biggest of the fertilizer companies, the Alabama Power Co., J. B. Duke, of the American Tobacco Co., and the owner of the Southern Power Co. with its vast operations in the Carolinas, are all opposed to the Ford offer and favor the offer of the Alabama Power Co. They are all intertwined through stock ownership, as has been shown by congressional investigations. If the Alabama Power Co. should secure Muscle Shoals there would be formed a combination of interests of water power and fertilizer with power for evil without limit.

There is always great danger to the public in any one group of interests securing control over any industry. It is but natural that these interests should object to Henry Ford's getting Muscle Shoals. They, like the Chilean Nitrate Corporation, do not want any competition, either in the fertilizer or water-power business. They believe in monopoly. They profit by monopoly. It is our duty to try to protect the people in their rights.

There are six and one-half million farmers in the United States. Thirty-eight per cent of our population live on farms. The annual value of crops and live stock amount to from eleven to twenty-five billion dollars. Agriculture has an investment of \$80,000,000,000, the largest investment by far of any other business. The next largest business is railroads, with an investment of \$20,000,000,000.

The shrinkage in value of the crops of 1920 amounted to \$8,000,000,000, from which the farmers have not yet recovered. In the face of this condition of the American farmer, the price of Chilean nitrate has advanced \$17 per ton within the last 30 days, with further increases threatened. The fertilizer known as 8-3-3

has advanced from \$26 a ton to \$31 a ton, and the indications are that it will go to \$36 in a short time.

The National Fertilizer Association opposes the Ford offer. It has flooded Members of Congress with literature in which it is contended: First, that the Ford Co. can not make fertilizer at Muscle Shoals; and, second, that it can not make it cheaper than it is now being sold. The president of this association appeared before this committee and made the same claim. If this be true, why should they be so concerned about the Ford offer? It is very apparent that they believe that Ford can make fertilizer cheaper and that it will materially affect their business. This same representative of the National Fertilizer Association contended before this committee that a monopoly of water-power interests was in the interest of the people.

The Secretary of War, in his report to Congress on the Ford offer, made this very significant and pertinent statement:

"In this time, when there is a large amount of unemployment, it is not without importance to consider the advantages to the Nation of the employment of the large amount of labor required in undertaking this development. I therefore urge that Congress give early consideration to this matter, not only to settle a contraverted question but to furnish employment on a large scale."

Mr. Ford intends, if his offer is accepted, to begin work immediately and give employment to thousands of people who are now unable to secure employment. Mr. Ford's personal representative, Mr. W. B. Mayo, said to you one day last week that Mr. Ford wanted to get in on the work at Muscle Shoals this summer while the weather is good and the river is low and before there is further damage to the unfinished dam and machinery and equipment at the dam. He claims that the development of his company will eventually result in giving employment to 1,000,000 people. This, with an average of 5 to the family, would mean 5,000,000 people employed and supported as a direct result of this development.

Can anyone doubt for a moment that Mr. Ford, with his immense capital, organization, and wonderful record of efficiency, will not make a success of this undertaking? Would not the American people regard it as a national crime to reject the Ford offer and prevent this development, which would be nationwide in its beneficial effects?

Mr. GREENE. Mr. Almon, do you want to leave in the record your deliberate suggestion that the rejection of the Ford offer would be regarded as a national crime?

Mr. ALMON. Well, if it is thought that expression is too strong I will say, "Would not the American people regard it as a national calamity?"

The acceptance of the Ford offer would not only result in giving employment to labor on a large scale, provide for better and cheaper fertilizer, and improvement to navigation, but that part of the country within a radius of 200 miles and probably more, and all intervening points would be supplied with cheap power for all purposes.

It also means the investment by the Ford Co. of forty or fifty millions of dollars in equipping the nitrate plant for the manufacture of fertilizer and the establishment of other industrial plants.

It is claimed by some that Mr. Ford can not make a success of the fertilizer business at Muscle Shoals; Mr. Thomas A. Edison, after visiting Muscle Shoals and making full investigation, said he considered that it was a practical thing to make fertilizer at Muscle Shoals; that there is nothing complex about it. Is not his opinion worth something?

Many said that Mr. Ford could not make cheap automobiles, trucks, and tractors in competition with those engaged in the business when he commenced, but in this they were mistaken. Last year the Ford Co. turned out 1,013,958 passenger automobiles and trucks, and is now selling an automobile, a tractor, and a truck for \$1,150, and claims that he will be able to reduce to \$1,000 if his offer for Muscle Shoals is accepted.

The success of Henry Ford is the marvel of the century when we realize what he has accomplished was in spite of the powerful opposition, fighting a single-handed battle. The great masses of the people of the Nation not only indorse his offer but have implicit faith in his ability to carry out the big plans he has in view if he gets Muscle Shoals.

One of the chief causes of his success is because he is willing to help his fellow man. No one ever hears of friction between capital and labor in the great manufacturing plants of the Ford Motor Co.

Henry Ford believes in high wages and low price of product. On that basis he has been a wonderful success. In this respect he is very different to many of the leaders of financial power in this country.

The Ford offer has the hearty and unanimous indorsement of every farm organization and farm newspaper in this country, and their representatives have appeared before this committee and earnestly urged its acceptance. They are equally as unanimous and united in their opposition to the offer of the Alabama Power Co. This is but natural, as it makes no provision for the manufacture of fertilizer at Muscle Shoals. The representatives of these farm organizations have visited Muscle Shoals several times and made a thorough investigation of its possibilities from a fertilizer standpoint and have been unanimous in their report and recommendations in favor of the completion of the development and the operation of the plants. They regard the acceptance of the Ford offer as the only hope of relief from the Chilean nitrate and fertilizer monopolies and trusts. The farmers of this country are watching closely the action of Congress in the matter of the Ford offer and will not be satisfied unless this is done. They are intelligent and fully understand the Ford offer and are confident that if it is accepted that the Ford Co. will revolutionize the fertilizer industry, destroy the monopoly, and give them cheaper and better fertilizer.

The Ford offer has the unqualified indorsement of the Mississippi Valley Association, an organization composed of strong and successful business men, representing 55 per cent of the population of the United States.

The Ford offer was unanimously indorsed by the great farmers' conference which was called by the Secretary of Agriculture, Wallace, at the request of President Harding, which was in session in the city of Washington for five days the latter part of January of this year. During the discussion of the Ford offer in that conference only one voice was raised against it, and that was by an official of the American Fertilizer Association.

President Harding in addressing the Washington conference of farmers, among other things, made the following significant statement:

"Waterways have been too long neglected in America. We need a practical development of water resources, both for transportation and power. A large share of the railroad tonnage is coal for railway fuel. The experiences of railway electrification demonstrates the possibility of reducing this cost and increasing efficiency. We may begin very soon to consider plans to electrify our railroads."

Soon after this address was delivered by President Harding Mr. Mapother, president of the Louisville & Nashville Railroad, one of the great railway systems of the country, announced in a speech in Birmingham, Ala., that he was in favor of the Ford offer for Muscle Shoals and if it was accepted by Congress his company would like to make a trial of electricity in railroad operation on its branch line from Muscle Shoals to Nashville, Tenn., a distance of about 150 miles.

The 800,000 horsepower developed at Muscle Shoals would conserve 6,500,000 tons of coal annually. That is, the water power would be equal to the power generated by the use of that much coal.

So when the water power is developed in accordance with the Ford offer it will also mean a conservation of coal on a big scale.

The Alabama delegation in Congress is as a unit in favor of the Ford offer and will continue to work together very earnestly to have it accepted by Congress. The delegation is equally as strong and united in its opposition to the offer of the Alabama Power Co. and its efforts to defeat the Ford offer.

The delegations from a number of other States have also indorsed the Ford offer. Business, civic, and commercial organizations in all parts of the country have passed resolutions urging Congress to accept the Ford offer. I don't recall anything that has ever heretofore attracted such a nation-wide interest and favorable indorsement. Not only farmers, but merchants, bankers, and professional men have made known to Members of Congress their approval of the Ford offer and their desire that it be accepted. It would seem that 99 per cent of the people in many parts of the country favor the Ford offer. I feel sure this is true in the State of Alabama, which I in part have the honor to represent in the House. I am also sure that the opposition in that State is just as strong against the offer of the Alabama Power Co. and its eleventh-hour effort to defeat the Ford offer and perpetuate its monopoly of the water power of Alabama.

This sentiment for the Ford offer and against that of the Alabama Power Co. has been demonstrated by the people of Alabama and other parts of the country by means of petitions, resolutions, of mass meetings, women clubs, league of women voters, posts of American Legion, labor organizations, and civic organizations of all kinds urging Congress to adopt the Ford offer and reject that of the Alabama Power Co. These expressions of the people have been filed with this committee with the request that they be carefully considered. There have been mailed to me petitions signed by practically every State, county, and municipal officer in Alabama, the immediate and direct representatives of the people, urging the acceptance of the Ford offer and strongly protesting against that of the Alabama Power Co. I will not ask to encumber the printed hearings with all of these petitions, but I do ask that one be inserted in the record—that of Jefferson County, in which the city of Birmingham is situated, the headquarters of the Alabama Power Co. You will notice that it is even signed by all the judges of the court in the city of Birmingham. I will only ask permission that a few of the resolutions referred to be inserted in the record.

As a further expression of the people of the Birmingham district I ask permission to insert in the record a copy of the resolution passed by a mass meeting held in the city of Birmingham on the 19th of last month, attended by 2,000 persons—1,000 more were turned away for lack of room—indorsing the Ford offer and expressing their unalterable opposition to the offer of the Alabama Power Co.

The sentiment of all the people of Alabama was well and very forcefully expressed in a memorial addressed to the President and Congress and committees in Congress, adopted by a state-wide mass meeting, 5,000 strong, at Montgomery, Ala., on Wednesday, March 1, 1922, which it is agreed shall be inserted in the record.

Mr. Chairman and gentlemen, I will now give very briefly my views and somewhat of an analysis of the Alabama Power Co.'s offer, and then I will have concluded.

The acceptance by Congress of the bid of the Alabama Power Co. would mean practically a donation by the Government of the large steam power plant at Muscle Shoals—nitrate plant No. 2, which cost \$12,326,392; the Gorgas plant and transmission lines, which cost \$4,676,000; and the \$17,000,000 which has been expended on the construction of the Wilson Dam, making a total of \$34,002,392.

The offer is deceptive in that it begins by offering \$5,000,000 for the two steam plants and transmission lines, but later provides that the cost of the lock at the Wilson Dam is to be deducted from this amount. One or more of the engineers claim that the lock would cost approximately \$4,500,000. Under the offer of the Alabama Power Co. it would build the lock and would have its own methods of bookkeeping, and it could easily make it cost the full amount of \$5,000,000.

The \$1,000,000 secondary horsepower offered for the operation of nitrate plant No. 2 would not be used by the Government, and the Government would not be able to lease it to anyone who would, for the reason that it would require from \$10,000,000 to \$15,000,000 working capital and expenditure to convert it into a fertilizer plant. Besides, no one could depend upon this secondary power available for 8 or 10 months in the year with which to operate the plant. The steam plants having been conveyed to the Alabama Power Co., neither the Government nor anyone it might designate to operate the plant would have any available power from two to four months when the necessary secondary power was not available. This secondary power would be of value if there were auxiliary steam plants or primary water power available. It would be of value if both of the dams were built and if storage dams were built in the upper Tennessee River and its tributaries, as Mr. Ford proposes to do at his own expense, so as to store the flood waters and let them down during the low stages of the river, and thereby convert secondary into primary power at the Muscle Shoals Dams.

It is provided in section 2 of the offer of the Alabama Power Co. that if this secondary power is discontinued by the Government, due to change in the art in the production of fertilizer and munitions, at nitrate plant No. 2, and, for no other reason as the offer is written, that the Alabama Power Co. is to purchase and pay for the same in accordance with a schedule to be set forth in the license. It will be noted that this is to be done in the event the Government

discontinues its power for the reasons stated above, which might never occur for the reason that the Government might, and in all probability would, never begin to use it. It will also be noted that the amount to be paid the Government for it in such an event is to be fixed in accordance with the schedule set forth in the license. This license would be issued by the Federal Power Commission, and the schedule of rates fixed thereby would be a matter of agreement between the commission and the Alabama Power Co., so the Government would be at the mercy of the Alabama Power Co., and it would result in the Government receiving practically nothing for this secondary power. For these reasons I feel that I was justified in saying at the outset that the acceptance of the offer of the Alabama Power Co. means practically a donation by the Government to that company of the two steam plants, transmission lines, and the Wilson Dam, upon which \$17,000,000 has been expended, altogether representing a total investment of \$34,002,392 by the Government.

If the offer of Henry Ford was not in existence I do not believe the committee or Congress would consider for a moment the acceptance of the offer of the Alabama Power Co. In the absence of the Ford offer the committee would evidently recommend the completion of the Wilson Dam by the Government rather than make this donation to the Alabama Power Co.

The Secretary of War has recommended that the Dam No. 2, known as the Wilson Dam, be completed by the Government in the event the Ford offer is not accepted. He stated that the revenue from the sale of the water power from the Wilson Dam would amply justify Congress in appropriating a sufficient amount with which to complete it. The committee and Congress would certainly conclude that it would be better to spend twenty or twenty-two million dollars more to complete this dam and own it for all time rather than make the donation of \$34,000,000 worth of property to the Alabama Power Co. in order to induce it to spend enough money to complete it and then own it, and if the Government acquired it at the end of 50 years would have to pay for it a fair value in accordance with the water power law. If finished in accordance with the Ford offer, it would be the property of the Government for all time. If the offer of the Alabama Power Co. was accepted there is no way by which anyone could know when, if ever, the work upon this dam would begin. When the permit was issued by the Federal Power Commission, the Alabama Power Co. would have two years under the water power law to begin construction work and might have it extended an additional two years. So the statement in the offer that work would commence within a reasonable time does not mean anything. In fact, there is no certainty whether a permit would ever be issued to the Alabama Power Co. by the Federal Power Commission if its offer should be accepted by Congress. If a permit was issued the company might never be able to borrow the money with which to complete the Wilson Dam. In fact, it might never make any effort to raise the money, but its real purpose in making its offer would have been accomplished—that is, it would have been the means of defeating the Ford offer. Your time and that of Congress would all have been in vain, and the Alabama Power Co. would continue to enjoy a monopoly of the water powers of Alabama, which its president claims and insists would be in the interest of the people. I deny this; the people deny it, as is shown by resolutions, petitions, mass meetings opposing the offer of the Alabama Power Co. and its methods.

The development at Muscle Shoals is a most important part of our national defense. There is located our great munitions plant. Would it not be a great piece of military strategy to turn it over to a lot of foreigners, or place it or its principal parts under their control? A majority of the stock of the Alabama Power Co. that can be voted is owned by foreigners. They own a large part of its securities. If the Alabama Power Co. completes the Wilson Dam, it would have to borrow the money with which to do it. It is natural to presume that it would do as heretofore and borrow it from foreigners.

The Alabama Power Co. published and furnished the Alabama Legislature in 1918-19 a statement as to its business and how it secured its capital, in which appears the following statement:

"The capital to construct the work was obtained in England, Germany, France, Belgium, Canada, and a part in the United States."

The Alabama Power Co. is owned by the Alabama Traction, Light & Power Co. (Ltd.), which is a corporation of the Dominion of Canada, and that it is very largely the property of citizens of Great Britain.

It is bad enough for this corporation under foreign influence to have a monopoly of practically all of the water-power sites in Alabama, much less to

get its clutches on all of the water and steam power connected with the Government munitions plant at Muscle Shoals and strip the plant of all of its ability to function in the event of a military emergency.

If the Ford offer is accepted it will be controlled by Americans and American money, and under no obligations to any great financial interests, trusts, or monopolies, domestic or foreign.

The offer of the Alabama Power Co. can not be regarded in competition with the Ford offer. It is entirely in a different class. It makes no provision for the building of Dam No. 3, no improvement, navigation improvement, nor the operation of the nitrate plant for the manufacture of fertilizer. All of which is provided for in the Ford offer. I do not believe that the committee will consider for a moment favorable action on the offer of the Alabama Power Co.

It would seem that there is but one of four courses for this committee to follow, viz:

1. That of scrapping the development which has cost over \$100,000,00, as has been suggested by the big interests opposing the Ford offer. Or

2. For the Government to complete the water-power development and go into the business of selling power and manufacturing and selling fertilizer. Or

3. Accept the offer of the Alabama Power Co. and donate to it the steam power plants and unfinished dam, representing an investment of \$34,000,000 by the Government, and make no improvement to navigation and no provision for the manufacture of fertilizer. Or

4. Accept the Ford offer and convert a large war-time expenditure into an investment which will result in a great benefit to the entire country.

It would be almost unthinkable to consider the first; the second would be very objectionable to the great majority of people; the third would mean the defeat of all of the purposes and objects of the Government in what has been done at Muscle Shoals; the fourth is the only safe and sensible course to pursue and would meet with the approval of the country at large.

In conclusion I most earnestly ask that when you have completed your hearings and visited Muscle Shoals that you will come to the conclusion that the offer of Henry Ford should be accepted, and that you will not only recommend its acceptance in your report, but that you will also prepare and introduce in the House such a bill as may be necessary to provide for its acceptance by Congress.

I thank you, Mr. Chairman and gentlemen, for your attention and your courtesy in permitting me to be heard.

(The resolutions referred to by Mr. Almon follow.)

RESOLUTIONS INTRODUCED BY HON. C. W. ASHCRAFT AND UNANIMOUSLY ADOPTED BY THE FLORENCE CHAMBER OF COMMERCE, FLORENCE ROTARY CLUB, AND FLORENCE EXCHANGE CLUB, IN JOINT MEETING ASSEMBLED, MONDAY, FEBRUARY 20, 1922:

Citizens of Florence in mass meeting assembled, take note of the following facts:

1. That the Alabama Power Co., doing business in this State, is owned principally by a foreign corporation with its official domicile in Canada (see official report of Graham investigating committee); that the majority of its stock is owned in Canada and England, and the policy of the company is therefore necessarily alien.

2. The only streams of Alabama offering opportunity for power developments of considerable proportions are the Coosa, Tallapoosa, and Little Rivers, and the Tennessee River at Muscle Shoals.

3. That the Alabama Power Co. has bought up and preempted the entire water-power sites and rights in perpetuity on the first three of these rivers, namely, the Coosa, Tallapoosa, and Little Rivers, and has entered upon a program of development by themselves, and the prevention of all development by others, generally estimated to cover a period of 100 years. Although they have now been operating in Alabama almost 20 years, they have completed only one unit in this program and activities already displayed give no promise of completing, within the 100 years, the developments already preempted by them. It is therefore evident that their purpose in bidding for Muscle Shoals can not be based upon a desire either for opportunity for expansion or to faithfully serve the public, but their purpose must be found in their desire to entrench themselves and fasten upon the people of Alabama and surrounding States for all time the blight of their complete and oppressive monopoly. By inference

they plead loudly against a 100-year lease to Henry Ford, but they propose to yield nothing of the stranglehold which they have acquired in perpetuity on every important power site in Alabama except Muscle Shoals.

4. In their activities instead of developing navigation conjointly with power, their development prevents navigation in any continuous form. Their entire interests is to retard development of power and navigation, as in so doing they can maintain highest possible rates for power and delay responsibility for navigation. Their record is that they have procured municipal franchises for light and power wherever possible and retail current at exorbitant retail rates. They have not fostered or developed industry at any point they serve and their reputation in the State is in line with the findings of the Graham congressional investigating committee in reference to their unpatriotic dealings with the Government during and following the war.

5. For the foregoing reasons we conclude that should Congress accept any proposal from Alabama Power Co. that would give them control over Muscle Shoals it could only result in delaying developments in all other streams in Alabama over which they have already obtained control in perpetuity, or delaying development of Muscle Shoals.

6. Alabama Power Co. has no experience in, nor plans for, any activity outside of development and transmission of power, and therefore could not be expected to finance or develop power faster than development of industry by others would create demand for power.

7. Being a corporation owned by aliens, the citizens of the United States could not intrust their security and preparedness as a Nation to the mercies of its policy makers, who are men whose allegiance is sworn to other countries.

8. On the other hand, Mr. Henry Ford has formulated a mammoth plan of industrial development that grips the imagination and thrills the enthusiasm of every American citizen, and seeks power for its operation. He is to the manor born, he has proven himself capable, he is regarded as fair in all his dealings. American citizens wherever located have confidence that he can and will succeed in the construction and operation of a great industrial section in such manner as to not only give employment to thousands now unemployed, but also to awaken new and inspiring ideals in industrial life. He came promptly upon invitation of his Government, and not at the last hour, and made a reasonable proposal to immediately develop all the power at Muscle Shoals, not part of it, and to immediately employ the whole power developed in needed industry, and to immediately make navigable the river for the benefit of up-river cities, as Decatur, Guntersville, Chattanooga, and Knoxville. He also proposes to ever hold the plants, processes, and personnel subject to the immediate call of the Government in case of war, and to operate to full capacity for the benefit of the farmers in times of peace.

9. While legislation and court rulings in every quarter have conceded to railroads, banks; in fact, all forms of business, and to organized labor the right to a reasonable profit or to a reasonable wage, only Mr. Ford in his proposal for Muscle Shoals has offered one ameliorating item to the sad condition of the American farmer, to whom we must all look for both food and raiment.

10. The foregoing facts considered, we as citizens of Alabama and of the United States do solemnly resolve:

First. That the Alabama Power Co., whose owners are citizens of foreign countries, propose to buy the power plant at nitrate plant No. 2, and this nitrate plant is the only such plant within our borders, and therefore constitutes the sole item of preparedness against war so far as nitrates are concerned, and no matter what price the Alabama Power Co. might offer for this steam power plant to separate it from the nitrate plant, the citizens of these United States would be worse than foolish to regard the offer otherwise than as coming from "Greeks bearing gifts."

Second. In view of their large holdings of other power sites in Alabama, which they neither develop nor allow to develop, we denounce the bid of the Alabama Power Co. for Muscle Shoals as both unpatriotic and contrary to the best public interest.

Third. Henry Ford, a citizen of the United States in whom his fellow citizens believe without reservation, has in response to the call of his Government, made to Congress a proposal, which, if accepted, will immediately procure the full development of all the water power at Muscle Shoals, the complete navigation

of the river and the building, within our day and generation, of an industrial empire that taxes the imagination to comprehend.

Fourth. Therefore, all these things carefully considered, we urgently appeal to Congress to promptly accept the Ford proposal and with the least possible delay put it into active effect.

Fifth. That copies of these resolutions be given to the press, and sent to all Alabama Senators and Representatives in Congress. .

RESOLUTIONS OF BIRMINGHAM MASS MEETING.

Whereas the great question before the American people to-day and the Congress of the United States is the proper utilization, for the benefit of all the people, of the great natural resources that have remained dormant for 100 years or more at Muscle Shoals, Ala. ; and

Whereas Henry Ford, the mechanical wizard of the age, has made a proposal to the Government that meets with almost unanimous approval of the people of the entire Nation, and apparently a large number of Representatives in Congress and the Senate; and

Whereas Henry Ford's offer for the operation of the Muscle Shoals properties was made in good faith to the proper person as spokesman for the Government, Secretary of War Weeks, and after due consideration by the Secretary of War was submitted to Congress for its approval or rejection, and was apparently about to be ratified; and

Whereas selfish interests, such as the Fertilizer Trust, power monopolies, and others, supported by the gigantic moneyed powers of Wall Street, are opposed to the Government disposing of these resources in a way that would be of benefit to the people as a whole; and

Whereas a sequel to this great opposition is shown by the submission of a bid by the Alabama Power Co., a foreign corporation, that has never been of any material benefit to anyone other than the stockholders, who are citizens principally of foreign countries: Therefore be it

Resolved, That we, the citizens of the Birmingham district, in mass meeting assembled this the 10th day of February, 1922, go on record as being unalterably opposed to the Government of the United States considering the bid of the Alabama Power Co. And be it further

Resolved, That we, the citizens of this district, heartily indorse and unqualifiedly recommend that the proposal of Henry Ford be accepted and entered into by the Government for the operation of the Muscle Shoals properties. And be it further

Resolved, That these resolutions be given the widest publicity by furnishing same to the press, and that a committee of five be appointed by the chairman of this meeting to forward copies of these resolutions to our two Senators and our Representatives in Congress and the committees of Congress before whom the proposals are now pending.

PETITION OF OFFICIALS OF JEFFERSON COUNTY, ALA.

THE STATE OF ALABAMA.
JEFFERSON COUNTY.

The Hon. E. B. ALMON,
Washington, D. C.:

We urge the Government to accept the offer of Henry Ford for Muscle Shoals because we believe that it will be developed by him for the benefit of the American people. We protest against the acceptance of the offer of the Alabama Power Co., because it would insure to it the control of every large water-power site in Alabama and thereby fasten upon our people for all times a water-power monopoly.

J. P. Stiles, judge of probate, Jefferson County, Ala.; M. V. Henry, county treasurer; William E. Fort, judge criminal division, circuit court, tenth circuit; H. P. Heflin, judge criminal division, circuit court, tenth circuit; Joseph N. Tate, solicitor tenth judicial circuit of Alabama; C. B. Smith, judge civil division, circuit court; J. O. Sims, judge civil division, circuit court; J. B. Aldr. judge civil division, circuit court; Hugh A. Locke, judge civil division, circuit court; Wm. J. Waldrop, clerk of circuit court; Richard T. Evans, circuit judge; Romaine Boyd, circuit judge; D. C. Ball, president board of revenue; Lacey Edmundson, board of revenue; T. E. Huey, board of revenue; J. W. Givin, board of revenue; W. B. Copeland, board of revenue; James F. Hawkins, tax collector; J. C. Hartsfield, sheriff; L. R. Dillon, tax assessor, Jefferson County; M. E. Morris, chairman board of registrars; Conrad H. Ohme, engineer, Jefferson County.

STATEMENT OF HON. WILLIAM B. BANKHEAD, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ALABAMA.

MR. BANKHEAD. Mr. Chairman and gentlemen of the committee, I shall at least earn the gratitude of the committee by being very brief in the concluding statement I shall have to make, because it is about time for the noon recess.

The entire Alabama delegation, Mr. Chairman and gentlemen of the committee, are grateful for the opportunity you have extended to us, through the courtesy of the chairman, to appear before you this morning and present to you a statement of the expression of the unanimous attitude not only of our entire delegation in the House, but I am authorized to say also the attitude of our representatives in the Senate, as being all for the recommendation by this committee that the offer of Mr. Ford be accepted in its amended form and reported to the House for favorable action.

I am not going at this late hour to make any argument on this proposition. This committee has been extremely patient in the hearing of this whole case. In my entire service in Congress I do not recall a great public question involved in legislation to which more elaborate consideration has been given by any committee, and I think the committee is deserving of the thanks not only of other Members of Congress but of the country at large for the desire it has shown to understand every angle of this great national question, because it is a big question. It involves questions of large national policy possibly, as well as vast expenditures, in connection with the solution of the problem with which this committee has to deal.

Gentlemen, you have heard this case. The record will soon be made up, and it is going to be a question of action upon the part of this committee. I do not know what consideration the committee has given to other offers that have been submitted, but the controversy seems to be whether you shall act favorably upon the proposition of Mr. Ford or whether you shall recommend the adoption and acceptance of the offer of the Alabama Power Co. This committee knows what is involved in these two propositions. You know what Mr. Ford proposes to do, and you have before you the guarantees of his undertaking, and you know what the offer of the Alabama Power Co. is. You have had a full and complete explanation of that offer. The cards have been laid on the table in this proposition, and it is up to this committee and to the Congress subsequently to take action upon it.

The people of the State of Alabama, the great preponderant element of the people of my State, are unquestionably in favor of the adoption of the Ford offer.

And gentlemen, without undertaking to be critical of the Alabama Power Co.—and I do not want to be that—it is rather significant, and I think it should impress this committee, that where there is what is claimed to be a local corporation which is offering a competitive bid to a man who lives in a different section of the country—and the people of Alabama are fairly intelligent people; they rate up with the ordinary people of the country in intelligence and in patriotism and in an attempt to protect their own interests and the interests of their children—I say it is singularly significant, gentlemen of the committee, that the people who are most directly interested locally in this proposition, no doubt from the standpoint of their own conception of their own best interests, have with practical unanimity recommended to this committee and to the Con-

gress of the United States, that the offer of the Alabama Power Co. be rejected and that the offer of Mr. Ford be accepted by the Congress of the United States.

Gentlemen of the committee, there must be some reason for that. I am not going to go into an analysis of the psychology of the situation or the arguments presented, because that would be tedious. This committee is perfectly able to form its own judgment on those questions.

I understand what has been set up as the most difficult question the committee has before it is that it may involve litigation; and it must be admitted, gentlemen of the committee, that it will inevitably involve litigation if the actions and assertions of the officials of the Alabama Power Co. are true, and they have given notice to this committee and to the world that they propose to stand upon their rights, as they see them, as expressed in their contract with the Government of the United States.

It resolves itself into this, if you accept the Ford offer: The Government of the United States has to deliver title to the property at Gorgas and to the transmission lines to Mr. Ford; but if it is involved in litigation, as it probably will be, and will possibly cost the Government of the United States some additional money, is the object to be achieved worthy of that expenditure and of that hazard? I submit to you that it is.

I think a great question here is the question of the fertilizer. I do not speak of the farmers from the standpoint of propaganda. Some suggestion has been made here that probably that phase of this case has been stressed too much. But the great vital question involved in this proposition, as we people see it, is the one affecting the interests of the farmers of this country. They have been subjected to the exactions of oppressive prices for fertilizers, as they see it. From the evidence presented to this committee by Mr. Swann, it is fair to assume that if the plant at Muscle Shoals is developed and completed, the cost of fertilizer to the farmers of America will be very greatly reduced. If you reduce it one third, or even 20 per cent, figuring the aggregate of millions of dollars that the farmers all over America, not only in our section but in every section of the country, could be saved by the operation of this plant on that one matter alone, gentlemen, I say it involves the proposition of the national prosperity of our great basic industry, which would justify the Government of the United States in the expenditure of some money, if it had to spend it. You are familiar with the proposition by which it is proposed to amortize the amount of the additional expense.

There you have a great plant, constructed under the authority of Congress, and if you accept the Ford offer you have that great plant always in operation for military preparedness. Some of the members of the committee, judging from their expressions, regard that as the paramount question; others look at it more particularly from the aspect of the production of fertilizer for the farmer.

Then, there is the great question of opening the Tennessee River for navigation. The Ford offer, if accepted, will practically complete the navigation of the Tennessee River from Chattanooga to where the river flows into the Ohio. So, there is the proposition—it is merely a question of action. The members of the Alabama delegation, the members of the Tennessee delegation, the members of the Mississippi delegation, the members of the Georgia delegation, who are the men most immediately interested in the matter from the standpoint of locality, after a full and fair examination of all of the aspects and all of the possibilities arising out of these two offers, gentlemen of the committee, submit it as their deliberate judgment—and we are merely seeking to express what we believe to be for the best interests not only of the people of our States and the people of all the other States, but we are expressing the judgment of the membership of that great Mississippi Valley Association, composed almost exclusively of business men, representing 55 per cent of the total population of the United States, who come to you with a very carefully prepared pamphlet in which they state their reasons why the Ford offer should be accepted—after a very careful and painstaking examination. They are hard-fisted, hard-headed, business men, and they are looking out for what they conceive to be the best interests of the population which that association represents, and they give it as their opinion that the Ford offer should be recommended for acceptance by the Committee on Military Affairs.

Gentlemen, we appeal to you upon the facts in this case, not upon prejudice, not upon rhetoric, not upon any ad hominum considerations at all, but upon the pure standpoint of what is for the real, best interests of the American people as a whole, and we ask you, especially the Members of the Alabama dele-

gation, to report favorably upon the Ford offer, with such suggestions as to the legal difficulties as may be suggested to the committee when you come to frame this legislation.

Mr. Chairman and gentlemen of the committee, I am very grateful to you.

The CHAIRMAN. The committee feels very grateful to you, Mr. Bankhead, for your kind statement regarding the efforts on the part of the committee to get through with this work, after a thorough and deep investigation of all the problems involved. We appreciate it.

Mr. Byrns, of Tennessee, would like to have a few minutes to speak for the Tennessee delegation. We will be very glad to hear Mr. Byrns at this time.

STATEMENT OF HON. JOSEPH W. BYRNS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TENNESSEE.

Mr. BYRNS. Mr. Chairman and gentlemen of the committee, I am going to ask the committee's indulgence only for a word or two.

The Governor of Tennessee appeared before the committee several days ago and stated that the overwhelming and preponderant sentiment of the people of Tennessee is in favor of the acceptance of the proposal made by Mr. Ford. There are present here this morning every member of the Tennessee delegation. Of course, I do not presume to speak for them, but I feel sure that they will agree with me when I say that the governor very correctly expressed the sentiments of all the men, women, and children in Tennessee. And I feel sure that the members of the Tennessee delegation also indorse what has been said in advocacy of the acceptance of Mr. Ford's proposal by the gentlemen from Alabama, who have just concluded their remarks.

Mr. Chairman and gentlemen, the people of Tennessee believe that a company with a record of monopolistic control, such as has been attested by the very strong resolutions presented by Mr. Oliver, which are indorsed, as I understand it, by the entire delegation from Alabama, can not be depended upon, if given control of this great power at Muscle Shoals, to utilize it in the interest of the general public.

The people of Tennessee are convinced, and I very earnestly join in that conviction, that the only proposition before the committee, which, if accepted, guarantees that the great power at Muscle Shoals will be developed in the most complete manner, and that after its development the general public, as a result of such development, will receive benefits therefrom is the proposition which has been submitted by Mr. Ford.

As has been forcibly stated here, I think, by the gentleman from Alabama, Mr. Oliver, the idea of Congress in first making it possible to develop this plant at Muscle Shoals was to utilize it in case of war for the manufacture of nitrates, and in time of peace for the benefit of the great agricultural interests of this country. Mr. Ford's proposition, as we view it, means that that power will not only be developed to its fullest capacity, but it means that the nitrate plants, which are intended to be maintained by the Government, will be utilized in time of peace for the benefit of the general public, and the farmers in particular, and maintained to an up-to-date standard. It also means that the Tennessee River will be made navigable, and that will open up to the country all of that rich section in east Tennessee, which abounds in minerals and other products so useful to the country in general.

In conclusion, Mr. Chairman and gentlemen, I want to emphasize what has already been said, that this is something more than a local proposition. It is distinctly a national proposition. Of course, the people in that particular territory, those who are local to it, will benefit materially, and that section will benefit materially. But it is a national proposition, because, as was stated by one of the most distinguished hydraulic engineers in the United States in a hearing held by another committee last winter, the development of this power, the demonstration of just how cheaply power can be generated there will mean the general development of water power throughout this country.

Representing one of the districts in Tennessee, and on behalf of Tennessee, speaking, as I believe, the sentiments of an overwhelming majority of the people of that State, I hope that this committee will, in its wisdom, see fit to recommend the acceptance of the proposition made by Mr. Ford.

The CHAIRMAN. Gentlemen of the committee, this concludes the hearing this morning, and I would like to ask you if the members of the committee will be willing to stay for a few minutes for an executive session?

Mr. OLIVER. May I say to the chairman that a newspaper reporter came to me after I concluded my remarks and said that he thought, perhaps, I had done the reporters an injustice in saying there had been no accurate reports sent out. I do not know who sent out the reports to which I have had reference. One of them appeared in the Washington Post of this morning, and I will be glad to supply a copy of that report, with some others that came to my attention, and submit them to the committee later. Some of them appeared in the Alabama papers. I do not recall any reports now that I had in mind appearing in the report of the Associated Press.

The CHAIRMAN. I saw that article which appeared in the Post this morning, and I asked those very questions that are referred to of Mr. Ford's representative.

Mr. OLIVER. Let me call your attention to this. I do not know whether you read this part of it. It says:

"After the hearings were adjourned yesterday other committee members said the legal barriers to acceptance of the Ford proposal appeared inescapable because of the contracts held by the Alabama Power Co. and the Air Nitrates Corporation, which, those concerns claim, give them exclusive rights to purchase the Warrior steam plant and nitrate plant No. 2, respectively."

That was the paragraph I had special reference to as having created a wrong impression; that was what I had in mind in making the statement. I have seen other statements of that kind in the press.

The CHAIRMAN. I do not know what the other members of the committee said, but I do say that I did say those things to Mr. Mayo, and called his attention to the proposition that we might have litigation over this matter; and I hoped that Mr. Ford would be able to agree with the members of the committee that if, in case of litigation, we would be able to depend upon him to try to help us out.

Mr. DAVIS of Tennessee. Mr. Chairman, will the committee hear me for just half a minute?

The CHAIRMAN. The members of the committee, of course, would be glad to hear any Member of Congress. I did not know that the gentleman wanted to appear before the committee, and made no arrangements for him. I would like to get into executive session and talk to the committee. We can probably arrange for you to appear before the committee at the next meeting.

Mr. BANKHEAD. Mr. Chairman, Mr. McDuffie, of the Alabama delegation, would like to have permission to file a brief statement in the record.

Mr. McDUFFIE. Mr. Chairman, I am not asking the committee to indulge me to-day, but I would like permission to file a brief statement in the record.

The CHAIRMAN. If there is no objection, you may hand your statement to the reporter and it will be printed in the record.

(The following statement was submitted by Mr. McDuffie:)

Mr. Chairman and gentlemen of the committee, it is my judgment that no question so far reaching in importance as the disposition of Muscle Shoals has presented itself to Congress or any committee of Congress since the end of the World War. Your problem involves not alone the return in dollars and cents to the Government upon its investment of a hundred millions of dollars, but the carrying out of a great national policy of preparedness or defense in the event of war and the encouragement and development of our basic national industry of agriculture in times of peace. The disposition or solution of your problem at Muscle Shoals is a question which I feel this great committee will not and should not approach from the standpoint of local interest or partisanship.

This committee has always claimed to be a nonpartisan committee in its work and the country has grown to know it as such. The great majority of the American people are therefore expecting you gentlemen to view this question and pass upon it in the light of its importance as a big national problem.

Muscle Shoals is the child, so to speak, of the Committee on Military Affairs. It was this committee that saw the value and possibilities of that second greatest water-power site on the American Continent and embarked upon its development. This development was never contemplated as a scheme to make money for the Government. A distinct policy was in view when the Congress decided upon the development at Muscle Shoals, just as we had certain policies in view when we built the Panama Canal and the Alaskan Railroad. The canal has never paid a return on the investment in actual dollars, and so far we have no reason to hope the Alaskan Railroad, which has cost some seventy-five millions,

will soon be a source of revenue for the Government, though each of these governmental projects has served a useful purpose and is the result of broad vision on the part of our statesmen.

Of course the Government reaps no return in money for maintaining an Army and Navy. In many instances the improvement by the Government of our rivers and the development of reclamation projects have never paid any appreciable amount on the money invested. I think it can be assumed therefore, that you gentlemen, while anxious always to secure the best possible return on money expended or to be expended by the Government at Muscle Shoals, can not and will not permit this to be your controlling thought in passing upon any offer which has been submitted to you. The main question appears to me to be the carrying out of the policy of Congress as expressed in the national defense act of 1916, namely, the construction or development of plants for making explosives and fertilizer. I submit that the offer of Henry Ford more nearly conforms to that policy of Congress already adopted than any other offer in this respect, and at the same time his offer, viewed from the standpoint of a return on the invested capital, is better than any other.

Measured by other investment of public money the Ford offer means a greater return on the capital invested than any other Government enterprise I can now recall. While you figure interest on the amount of capital invested in the plants for which he offers five million cash, you should figure also interest on the money invested in the Alaskan Railroad, the Panama Canal, and the reclamation projects. It might also be well to figure on the investment in our merchant ships, some of which were offered at twenty-one hundred, though they cost about \$800,000.

Now, let us see what the situation is with reference to these offers for the Muscle Shoals property. You will recall that many months ago the question of completing Dam No. 2 presented itself to Congress. At that time when we were entering the readjustment period, the Congress, realizing the need for the practice of economy—rather, I would say, the Congress, realizing that a very large amount of money had already been expended in the whole project at Muscle Shoals—saw fit in its wisdom to stop the work on the big dam, where some seventeen millions had been expended. At that time I do not think Congress really understood the value and possibilities of this work. Be that as it may, the Secretary of War was directed to "take stock" as it were, of the property and ascertain whether or not the project was one in which the Government could afford to invest more money at this time. The Secretary also endeavored to ascertain whether or not there were private corporations or individuals who would be interested in the purchase or lease of the project. After "taking stock" the Secretary of War has found that the dam must be completed, and has said so without hesitancy.

General Beach, the Chief of Engineers, communicated with various parties, corporations, and individuals to ascertain if there were any who would be interested in the project. Henry Ford was the first to make a substantial proposal and one worthy of consideration.

In all earnestness let me ask you, gentlemen, do you believe there would have been other offers for this property and especially offers from the Alabama Power Co. and Engstrom if Henry Ford had not submitted his offer? Sitting here somewhat like a jury to pass on all the offers and all the circumstances surrounding them, the law and the facts in the case, don't you know beyond peradventure that this offer made by the Alabama Power Co. would never have been made had it not appeared that Congress might look with favor on the Ford offer?

The Alabama Power Co. is right there on the ground, and it is right here on the ground with all its genius, able sponsors, and advocates. That company knew probably more about the value and advantages of Muscle Shoals than any other company or individual could have known. Why did it not submit its offer when called upon by General Beach or at least within seven months after the Ford offer was submitted to the Secretary of War? Surely you gentlemen put no credence in the suggestion that capital was not available to them. Is it not remarkable how quickly capital became available just as soon as this committee began consideration of the Ford offer? When did these threats begin about litigation long drawn out? When were suggestions made as their contract which is beyond question a void contract? In so far as I can answer, not until they saw that Congress would consider the Ford offer, and now they rush in here with an offer of \$5,000,000, an offer to complete

the dam without cost to the Government, less the cost of locks, etc., and leave the Government in control of its nitrate plants. I think the evidence here will justify the assertion that under their offer, if accepted, they would get over \$30,000,000 worth of property for \$500,000, because the cost of the locks is estimated to be \$4,500,000.

Has it occurred to you gentlemen that the offer of Henry Ford has suddenly made the money market easy for the Alabama Power Co.? If so, even that company owes something to the Ford offer.

I think the evidence before this committee justifies the assertion that when Mr. Duke, the owner of the Southern Power Co., in answer to General Beach, condemned the Muscle Shoals project and said its completion was not feasible and that he would not be "interested" in its purchase or lease, he spoke for the great family of interests we find here condemning the offer of Henry Ford. In that family we find the American Cyanamid Co. and its child, the Air Nitrates Corporation, which corporation some evidence shows consisted of 10 men who put up \$100 each and drew down more than a million dollars from the Treasury—yet they, too, were great patriots in times of war. We find the Virginia-Carolina Chemical Co., a member of the National Association of Fertilizer Manufacturers, whose president, Mr. McDowell, appeared here to protest against the Ford offer. We further find in that family also the Southern Power Co., whose president and owner "was not interested," and next we find the Alabama Power Co., the child of the Alabama Light & Traction Co., of the Dominion of Canada. I say it is the child of the Light & Traction Co., because all of its common stock, its voting stock, is owned by that foreign corporation, which is probably the great big "daddy" of them all.

I do not wish to be misunderstood. I would not heap condemnation on the Alabama Power Co. solely because it is the offspring of foreign capital. We do not hate capital in Alabama. We invite capital to come and help us develop our wonderful natural resources. We have proven that in Alabama, where our legislature has exempted this corporation from taxation and has made it the recipient of special favors.

It matters not where the capital comes from, so long as it is decent, we welcome it to our great resources, but we do not like to have all our resources monopolized by any sort of capital. In so far as the danger comes from the investment of foreign capital, if war should come we Americans can take charge of that capital in just about 15 minutes. Of course, I prefer our great wealth to be owned by citizens of the United States, but this is not the controlling thought in the minds of about 98 per cent of the people, or maybe 99 per cent of the people, of Alabama who are appealing to you to accept the Ford offer.

We say, gentlemen, that the Alabama Power Co. now owns practically all the available water-power sites in our State; that it does not need Muscle Shoals in carrying out its plans to develop the power and all the power the market of Alabama will need for several generations to come. We beg you to consider the fact that if this great water-power project is given over to the Alabama Power Co., that company will have a complete and perfect monopoly of the water-power industry of the State. Give this project to the Alabama Power Co. and they will develop it only in accordance with needs of that section for power. They will feed it out as the demand grows. The market is not there now. General Beach has told you so. Therefore we contend if the Alabama Power Co. gets control of this project it is not unreasonable to say that generations will pass before Muscle Shoals is developed to its fullest capacity. We believe if you give this contract to Ford, he or his company or companies will immediately begin work to get the benefit of the maximum amount of power to be developed there and on the upper reaches of the Tennessee, and the present generation will reap some benefits therefrom.

Gentlemen, it must appear to you and to the people of the country remarkably strange that only 7 or 8 or 10 months ago the very same interests, speaking through Mr. Duke, thought Muscle Shoals should be scrapped, or at least discouraged its completion, are now saying that the property is entirely too valuable to sell and lease to Henry Ford for the sum he offers and under the terms of his proposal. I am sure every man on this committee is convinced beyond a doubt that the action of Mr. Duke was inspired by the hope that this great national asset at Muscle Shoals could be secured in the future from the Government for a mere song. There can be no other conclusion. While Mr. Duke spoke only as owner of the Southern Power Co. there is no escape from

the conclusion that he was speaking also for the whole family of interests which have since protested against the Ford offer.

Regardless of propriety, it is but natural for those interests with which the Ford interests would compete in the markets of the country and the world to protest against the Ford offer. Mr. Ford expects to make aluminum steel. Of course the aluminum interests are opposed to that, and probably the steel interests as well. The hydroelectric power companies of the country do not care to have him mixing up in their business. He expects to make fertilizer. He guarantees to make fertilizer and fertilizer products in an amount equal to about 20 per cent of the demands of this country. He has gone far enough to guarantee to organize a \$10,000,000 company for his operations. Of course, this will affect the price of fertilizer and the fertilizer interests are against him. The by-products and coke-oven fellows do not want him to get into a business that will materially affect their business, and so we find them scorning the Ford offer. So on it goes with all interests who fear that competition which will probably come with the Ford interests in control of and using this great power development of 1,000,000 possible horsepower and probably more to be developed on the upper reaches of the Tennessee River. I think I am entirely justifiable in saying that the interests now opposed to the offer of Henry Ford actually fear he will revolutionize industry along several lines.

There is no well-founded fear from these opposing interests. The field is big enough, broad enough, and inviting enough for all the genius, vision, brain, energy, and skill of each of these interests. The field for the uses of hydroelectric power is new and undeveloped. I believe the future has in store thousands of uses for electric energy undreamed of by the masses of men.

Your problem, gentlemen, if I may suggest, is not one involving simply a clash between individual or corporate interests. The real issue before you is how the interest of the people and of the Government can best be served.

The Alabama Power Co. is here to-day putting up, as we used to say in our day of football, strong "interference." They are trying their best to block the game. On the side lines there are not many rooters for their team, but the representatives of the people of this country had better keep their eye on the ball. This company works "in wondrous ways its mysteries to perform." Of course, you hear threats of litigation. Of course, you hear of their remarkable patriotism in times of war, when the truth is this company was actually hog tying our Government. They permitted their Government to build a unit which can hardly be separated from their own. They permitted the Government to construct a transmission line on 20 miles of their right of way and bought the rest of 60 miles of right of way in their own name on which to build the line from their Gorgas plant to Muscle Shoals. They were paid a fee of some \$285,000 for superintending this work, the Government paying for every piece of material and every hour of labor used in the construction of this unit and line at a cost of nearly \$4,000,000. Now they will not even say what a reasonably fair value of this jointly owned plant and line is. All of these things were done, I contend, with some hope, if not feeling of assurance, that when the war was over the Alabama company would fall heir to the property or buy it for a nominal sum.

Shall the best interests of the whole country be now made subservient to the rights proclaimed by this company, which they secured or thought they were securing from the Government during the stress of war? It has never been made clear to me nor do I believe anyone can claim that the Government is legally bound by a contract made without the authority of law. Surely there is no legal obligation resting upon the Government under this contract. I can not agree that there is even any moral obligation resting on the Government. The Secretary of War had power to sell but not the power to contract to sell to one particular company sometime in the future, to the exclusion of all others who might desire to purchase. The act of July, 1918, gave him the power "to sell and report to the next Congress." Therefore even should he have given his representatives authority to act for him they could not bind the Government under this option to buy as set out in the contract.

Here we have the best interests of the public on the one hand and the claim of this corporation on the other. I would not advocate the condemnation of private property or the destruction of vested rights. It is a very easy matter to figure out what the actual investment is and the value of the interest of the Alabama Power in the Gorgas plant, which is beyond question a part and parcel of the whole project of the Government at Muscle Shoals adopted for the making of nitrates and fertilizer. It was made a part of the project with

the full knowledge and consent of the company, even though they may never have dreamed that anyone would offer to take over the whole project. It is true that the company conveyed to the Government their title at Dam No. 2 for \$1. They say in their advertisements, which they are now running in practically every weekly newspaper in Alabama, setting forth, amongst other things, their abundance of patriotism, that their rights at this dam site cost them "just under" \$500,000. The evidence here tends to show that it cost them \$476,000. Let us admit that this is true; yet don't you know they had in view the final capture of this big dam site after the war for a very nominal sum, with the dam completed. This deed passed about the same time or just a few months before the signing up of this contract that is so full of patriotic fervor. While the Alabama Power Co. is spending so much money advertising its patriotism throughout our State, why does it not set forth the terms or just a few of the terms of this contract? Why does it not publish to the masses of the readers of these county weekly journals article 22 of the contract and the terms under which they were given an option to purchase? I do not condemn the officers of this company for their appearance here in behalf of the company they are paid to represent. I know and like many of them personally and would not speak derogatory of their integrity, but I can not agree that they have a meritorious case, and I know their offer can not compare with the Ford offer if the welfare of the public is to be well considered.

I have presented to your committee memorials and petitions from every section of our State urging the favorable consideration and the acceptance of the Ford offer. I may be mistaken, but I am firmly convinced that a majority of the people of the whole country favor his offer. They favor his offer because it conforms to the wise policy of Congress in adopting the Muscle Shoals project, and they further believe Ford should be given control of this great project because under his control and operation the full benefits of its development will accrue to the public. They believe this project, this great national asset, should not be turned over to any company exclusively in the power business, and with which the making of explosives and fertilizers is of secondary consideration. They believe, and I believe, that Henry Ford or his companies is the only agency interested that will develop Muscle Shoals to its fullest capacity and give the people of the country the direct benefits of that development.

In speaking of Mr. Ford, I do so without that same degree of admiration or reverence that many people possess. I do not find myself in accord with all of his economic and political ideals. I must confess that I do not subscribe to the belief that he can immediately give employment to 1,000,000 men at Muscle Shoals if his contract is accepted. It might be done ultimately, and I think will be done. I do believe, and you gentlemen as well as all others must admit, that Henry Ford is a wonderful genius, a great financial wizard, and stands in a class by himself as one of the world's foremost captains of industry. Indeed, he is in a class by himself, and as some one has said, he is something of a great commercial iconoclast. He is one of the world's richest men, with a world-wide business, and yet a business that is not interlocked with other great interests. He asks no favors of the moneyed powers and begs no quarter of other big business. Everyone must admit that he has done more to add comfort to American farm life and given greater inspiration toward the building of good roads by the production and sale of his automobile than any other hundred men in the same business or any other man who ever lived.

The people of this country believe in Henry Ford as a great developer. They believe he will do what he promises to do. They believe he will make a success of Muscle Shoals to the people's benefit; that he will spend fifty millions and more if his contract is accepted to make agriculture and farm life more attractive and profitable by the production of a concentrated and higher-grade fertilizer. We believe he will prove that the fertilizer industry is in its infancy, just as the expert Doctor Whitney said it was. If he can save to the farmers of this Nation the freight and bagging of about sixteen hundred pounds of material that is absolutely without value as a food for plants in every ton of fertilizer, then the great benefits he will bestow upon the people of the agricultural industry alone can not be figured out in dollars and cents. It would run into the hundreds of millions.

Of course, the coastal plains and the Gulf territory now use most of the commercial fertilizer manufactured in this country, but as the years go by every section of this country where agricultural pursuits are followed will need

soil and plant food which can be made at Muscle Shoals. In this respect therefore the project is a national one, to say nothing of the preparedness of the Nation by having a plant ever in readiness to make explosives. The investment of the Ford millions at Muscle Shoals will add much to the taxable valuations of the Nation. You will recall the testimony which showed that immediately after the war between the States, North Carolina was the poorest State in the Union and to-day she pays more taxes per capita than any other State in the Union as a result of the investment in hydroelectric power.

These great interests here who are fighting the Ford offer are using all their wits and power to abate your decision and final action, and trying to delay the decision of the Congress as much as possible. What better way could they bring about delay than to have another offer presented every week or so and then have the Alabama Power Co. threaten the Government with a legal fight to the last ditch. If they can persuade you that the Government is so entangled with them, that it is "hog tied" in a contract that will becloud the real issue, that the interests of the Government are now so interwoven, it can not extricate itself from the hold they have, then the fight of the interests opposing the Ford offer is won.

You may ask, How do you know Mr. Ford will live up to his proposal? That question was asked by some member of the committee. We do not know that the sun will shine to-morrow. We do not know that we will be alive to-morrow. We judge the future by the past. If a man has always lived up to his agreements, if he has accomplished every task he has undertaken, and especially if he has the means to carry out his promises, we can very safely predict that he will continue to act in good faith with his fellow man and with his Government. Again, the very proposal itself of Mr. Ford provides that his contract shall be forfeited in the event he fails to live. He could not afford to break faith with the Government.

The delay in disposing of Muscle Shoals has already cost an immense amount of money and is to-day costing nearly \$10,000 a day to keep the plants and property in their stand-by condition. It has been estimated by Mr. Smith of the Mississippi Valley Association, comprising 55 per cent of the people of the country, that the cost to the Government already accrued by delay in completing this project and accepting the Ford offer would amount to over a million dollars.

Let us say, gentlemen, that you find, for the sake of argument, that the offer of the Alabama Power Co. is the best offer from a standpoint of finances. Then I ask what are you going to do with the nitrate plants? Are you going to put the Government into business? Let us hope not. I maintain that the Government can not economically operate any business. Do you really believe that anyone is coming along to offer us anything for the eighty millions invested in these plants without the assurance of more than 100,000 secondary horsepower with which to operate them. If not, are you going to junk them? We have had enough of Government operation of business. We have not forgotten the railroad under Government control, nor a merchant marine that cost us \$1,000,000 a day net loss for about a year. If you do not put the Government in the business of making fertilizers at Muscle Shoals, which would in the end cost the taxpayers much more than they now have there invested, and you have no offer to take over and operate the nitrate plants by private capital, how will you keep a plant in readiness to make explosives in times of war? These questions all find their answer in the acceptance of the offer made by Henry Ford. He is the only one who has come forward at the request of the Government and submitted an offer that in my judgment you can seriously consider. At the end of the 100-year lease to him the property returns to the people. He offers to pay back to the Government the cost of completions of the dams, while at the end of the 50 years of lease to the Alabama Power Co. the Government can only get control of the plant by paying that company for its investment under the water-power acts of Congress. I firmly believe the people of this Nation would derive more from this great God-given asset at Muscle Shoals even if the Congress gave the whole project to Henry Ford than they can ever hope to gain by selling it under any other offer which has been presented to you.

On behalf of the people of my district and my State and in the interest of the public let me suggest that the proper solution of your problem lies in the acceptance of the offer of Henry Ford.

Mr. MARTIN. Mr. Chairman, I wish merely to ask the privilege, in behalf of the Alabama Power Co., of filing in the record a statement answering state-

ments that have been made this morning, so far as they affect the Alabama Power Co., as we, of course, would have no opportunity to do so after the matter reached the committee.

The CHAIRMAN. That is a matter which the committee will take up immediately after we get into executive session. Personally, I would have no objection to it. That is simply fair play, so I think there will be no objection, Mr. Martin; I will take it up with the committee.

(NOTE.—The committee agreed to the insertion of the statement, which is as follows:)

STATEMENT BY THOMAS W. MARTIN, PRESIDENT ALABAMA POWER CO., IN ANSWER TO STATEMENTS MADE BEFORE MILITARY AFFAIRS COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON MARCH 8, 1922.

1. Congressman Oliver included in his statement certain resolutions which, he stated, were adopted at a mass meeting recently held in Montgomery.

The first charge against this company is that it owns and controls a number of power sites on several rivers in Alabama and that in 14 years since its incorporation it has built but one power dam and commenced work on another, and that it has been the policy of the company to develop only such power as could be sold in small units and at high prices.

This statement is both misleading and untrue.

By act of Congress of 1907, authority was given to construct a power dam on the Coosa River at Lock 12, and the development was completed with 110,000 horsepower within the time fixed in the act.

From 1912 to 1920 no act of Congress was passed granting authority to construct dams in navigable streams at any place in the United States. In fact, any construction of such dams was prohibited by the act of Congress of 1890, and this act was construed by Government engineers even to require Government approval before dams could be constructed on the Tallapoosa and Little Rivers, because such dams might affect the navigable capacity of the Coosa and Alabama Rivers, into which those rivers emptied.

2. In 1912 a bill was prepared by Mr. J. W. Worthington, then vice president of this company, to authorize a second development on the Coosa River, and it was introduced in Congress. The bill was passed by Congress, but vetoed by President Taft because it did not contain certain provisions now in the Federal water power act. From that time until 1920 water-power development was discussed continually in Congress, and during that time no special act of authority was given for any development to proceed, it being the policy of Congress to await the passage of a general act under which all developments would be placed on the same basis respecting the terms and conditions of the development.

3. Mr. Worthington, again acting under the instructions of this company, presented a proposal to the Government engineers on December 10, 1913, for the construction of Dams Nos. 2 and 3 at Muscle Shoals in connection with the Cherokee Bluffs and Little River storage developments, and this plan was recommended by the Government engineers. (H. Doc. 20, 63d Cong., 2d sess.)

The public in Alabama was well aware that the Muscle Shoals Hydroelectric Power Co., a subsidiary of the Alabama Power Co., originated and was for many years active in keeping before the people of Alabama the importance of that development, both for industrial and municipal purposes and for navigation. After a considerable expense and years of labor, the question assumed more than local importance until Congress provided a large sum with which to make the necessary engineering explorations, the collection of data, and information looking to the adoption of the project by the National Government in cooperation with private capital. No one at that time in Alabama questioned the purposes of this company. Impugned its motives or assumed to suggest the approach of a power monopoly that would ultimately throttle and retard the development of the State. Many of those who now denounce the company were its most enthusiastic supporters, and with full knowledge of its plans to connect Muscle Shoals with the storage reservoirs in east Alabama, urged that the work go forward. Delegations journeyed to Washington and importuned congressional committees. The Alabama delegation in Congress was earnestly active in advancing the plan. Indicative of the popular feeling, the Sheffield Standard, a newspaper published in one of the cities where the development is located, contained the following editorial, in 1914, entitled "Away with demogogy":

"* * * Now, after 30 years of waiting, that a corporation has been formed big enough and with sufficient ability to develop this power, many politicians

have been foolish enough to raise a hue and cry against the Muscle Shoals Hydroelectric Power Co. They have declaimed throughout the length and breadth of the land that the greater water power at Muscle Shoals is about to be seized and appropriated by a monopoly. Other politicians, like Mr. Underwood, Mr. Dent, Mr. Heflin, Mr. Burnett, Judge Almon, and Mr. Blackmon, have openly declared in favor of the development of this power by the Muscle Shoals Hydroelectric Power Co. In each case the people of Alabama have, as any man with a grain of sense knew they would, rebuked the demagogue, who, for his own selfish reasons, has stood in the way of progress and development, and set the seal of approval upon the constructive statesmen who have proclaimed from the stump that if elected to office they would encourage and support the development of Alabama's water powers. * * * *

"Corporations of old adopted 'the public-be-damned' policy; the Muscle Shoals Hydro-Electric Power Co. has adopted the 'public-be-told' policy. * * *

"Men of Alabama, let us arouse ourselves! Mobile Harbor must be made the gateway of the Southern States to the Panama Canal. Reservoirs must be built in the headwaters of the Tallapoosa, which will conserve the spring freshets, prevent them from deluging the farms in middle and south Alabama, and turn them loose during the periods of low water, so that Alabama's rivers may be navigable 12 months out of the year. The vast power on the Coosa and the Warrior and the Tallapoosa and the Tennessee must be harnessed and put to work. Let us have more James Mitchels, of London, bringing British gold for Alabama's development. Let us have more J. W. Worthingtons and Frank S. Washburns. And for God's sake and the sake of prosperity and development of the State, let us have fewer Mabrys, Wattses, and Callahans."

4. No action having been taken by Congress on our proposal of 1913-14, a further study was made by the Government engineers and the same plan again approved in their report of 1916 (H. Doc. 1262, 64th Cong., 1st sess.), excerpt from which we have filed in the record. It was, however, recommended in the last report that in view of the passage of section 124 of the national defense act of 1916, action on the proposal be suspended until it was determined whether the Muscle Shoals power would be utilized for the nitrate plant.

5. In 1918, after our country entered the war, the Government determined to develop the Muscle Shoals power for war purposes. We thereupon donated the Wilson Dam site to the Government and transferred to it for \$1 titles and rights in connection with which we had already spent just under \$500,000. The Secretary of War acknowledged our donation, saying, "I beg to acknowledge with thanks the company's generous and public-spirited action." The act of the company in making the donation was commended throughout our State by those who felt that by so doing we had hastened the development and had contributed to the upbuilding of the State.

6. Shortly after the Federal water power act became a law, in 1920, we filed application for a second power development on the Coosa River in Alabama, to have an installed capacity of 120,000 horsepower, costing upward of \$8,000,000. The application was granted and license issued to the company, and construction is now under way on this development.

In response to the letter of the Chief of Engineers, we advised him on May 28, 1921, that in our judgment the Muscle Shoals project was an economical and profitable undertaking, and that we were prepared, as in the past, to co-operate with the Government in any way desired looking to its completion.

We again advised the Chief of Engineers on July 14, 1921, that on account of the increased demands for power, we would have to proceed promptly with another power development unless the Government policy at Muscle Shoals should be modified to permit the use of part of that power in public service.

It will thus appear that this company made efforts for many years, through its representative, Mr. Worthington, and others, to obtain the consent of Congress for power developments in Alabama, but the laws remained unchanged until the Federal water power act was passed. This was well known to at least two of those who participated in the Montgomery mass meeting, namely, Mr. J. W. Worthington, formerly an officer of this company, but who is now Mr. Ford's representative, and Mr. J. L. Andrews, one of the signers of the resolution, who is an attorney residing in Sheffield, Ala., and who was regularly retained by this company in the Muscle Shoals district from 1912 to January 1, 1922.

Although we have been able to make but one power development in Alabama, there being no Federal legislation until 1920, we have extended our lines in various parts of the State, and with the aid of reserve steam plants now have

a connected load in excess of 370,000 horsepower. More than 80 per cent of this load is used for industrial purposes, and we have many consumers whose demands run from 5,000 to 25,000 horsepower.

7. In 1907, before any large power developments were made in the State, the average cost per horsepower year was \$72, and in 1917, due to the direct influence of the power developments of our company and others, had decreased to \$21 per horsepower year. On the other hand, in the State of Mississippi the cost per horsepower year was \$97 in 1907, and this had decreased to \$93 in 1917. In this period of 10 years there was no water-power development in Mississippi, and hence no large central-station systems. This shows in the most striking way the great advantage to the public of having power distributed to the public and also answers the statement that our company has only developed power which it could sell in small units and at high prices.

8. It is also charged that our company controls the utilities in our principal cities. We have no interest in the utilities at Birmingham, Montgomery, and Mobile, the principal cities of our State, but furnish the power to the utilities operating in Birmingham and Montgomery. We do control, however, the utilities in a number of the other towns and cities. In every case our company has taken over utilities or constructed systems in response to the public demand and we have throughout our system reduced existing rates in almost every community, or put in new and lower rates for all classes of service. We have now approximately 17,000 direct customers, and including the customers of other utilities there are more than 60,000 consumers of light and power served from our system.

OWNERS OF COMPANY'S SECURITIES.

9. The Alabama Power Co. is a corporation organized and existing under the laws of Alabama. The company was until August, 1914, largely financed abroad. We have stated before this committee and on various occasions in Alabama that this plan of financing was changed on account of the war in Europe, and since 1914 the company has been entirely financed in the United States. We have also stated to this committee that if we proceed with the Muscle Shoals project it will be entirely financed in the United States. Congressman Almon quotes from a statement made by this company in 1918 with regard to source from which the capital was obtained for our early development. He only quoted a part of that statement, which contains a full explanation of our financing plan since 1914, and I am sure he did not mean by omitting a part of the statement any unfairness to our company, but if he had made a further quotation he would have confirmed just what we have on several times stated to this committee. Since 1914 the flow of securities to this country has been so great that of its total issues at this time not over 35 per cent or 40 per cent are held out of the United States. As noted above, it was widely known in Alabama in 1914 that we were making developments with foreign capital. Congressman Almon, who was most interested at that time because the proposed Muscle Shoals development was in his district, not only did not oppose the plan but openly favored the development by our company, as noted from the above newspaper comments.

The company has several thousand stockholders in Alabama and in other sections of our country. For many years a large majority of our board of directors has resided in the State of Alabama. The plans and policies of the company have in fact been controlled by citizens of that State for many years.

To safeguard the national welfare, the Federal water power act, section 16, authorizes the President, whenever in his opinion it may be necessary, to take possession of any project constructed under the act "for the purpose of manufacturing nitrates, explosives, or munitions of war, or for any purpose involving the safety of the United States." The Secretary of War, in transmitting the offer of the power company to Congress, said (par. 7): "This broad provision of the act is of special importance to the United States in view of the location of the nitrate plants at this community."

Therefore, it is of no importance that some of the early securities of the company are held out of the United States, for the licenses and its property are always subject to the laws of the State and Nation.

THE GORGAS STEAM PLANT.

10. The Alabama Power Co., prior to 1917, acquired and owned the Gorgas steam plant, which had been constructed as the reserve steam plant for its system. It owned a small tract of land for the plant site, had the usual

facilities for such plants, including water intake and discharge tunnels and foundations for a three-unit plant. In order to provide for the coal necessary for the operation of the plant the Alabama Power Co. financed the operations then and now being conducted immediately at the plant. The facilities made it possible for the company to generate steam power at the lowest possible cost to supplement the Coosa River power in times of low water.

When the Government decided to construct the nitrate plant during the war, it is a matter of record in certain hearings that the existence of the steam plant, together with the large hydropower plant of the company on the Coosa River, was the controlling factor in the location of the nitrate plant at Muscle Shoals, because it was necessary to have a large amount of power within six months. No water-power plant could be erected at Muscle Shoals within less than three or four years, and a new steam plant could not be erected at Muscle Shoals in time to meet the requirements of the Government at nitrate plant No. 2. Government officials then turned to our steam plant and to our system in general for this immediate supply of power. It was agreed that we would build a transmission line 90 miles to Muscle Shoals, and we did build the line, bringing it into operation within less than five months, thus enabling the Government to obtain power in advance of the schedule on which the work was then proceeding. The company was serving many industries, and at least 80 per cent of its power was being used by those which were classed as essential for the production of materials for use in the war. It was, of course, within the power of the Government to suspend the delivery of energy to any of these consumers, but it was admittedly of great importance by Government officials that this service be not interrupted.

It was also decided that the Alabama Power Co. at times could furnish power, but it did not have sufficient capacity in order to enable the company to deliver continuously the amount of power needed at the nitrate plant. The Warrior facilities for installing a second unit were so far advanced that a few months or more in time would be, and were, saved by making the extension at that plant. Time, as we all know, was of the greatest importance in the war period and all things made subordinate to that important factor. Therefore the Alabama Power Co. was directed in December, 1917, by the Nitrate Division of the Government, to build a transmission line on rights of way of the company for the United States, and to erect at Warrior on its lands for the United States, an extension to its Warrior plant. At the same time the Alabama Power Co. agreed, at the request of the Government officials, that if the Government permitted the Government to sell its interests in these facilities, the company would purchase them at fair value. The desire of the Government was to proceed in the quickest possible way to obtain power, having also in view limitation of its investment and making a plant which would obtain for the Government the best possible salvage after the war. Those Government officials who knew the facts, as Secretary Weeks, Major General Williams, Colonel Joyce, and Major Burns, have raised no question whatever as to the fairness of the contract with the Government and have expressed the view that, aside from the legal phase of the contract, the Government has a moral obligation to carry out in its agreement with the power company.

In the very beginning of the negotiations the Alabama Power Co. explained that the cost of an extension of the capacity desired by the Government would be more than the demands of the company warranted; however, if the Government would aid it in securing the funds with which to make such an extension that it would do so. Effort was made by the Government officials to advance funds with which to build the plant, but it was found that there was no way under which it could be done. Thereupon, the company agreed to buy out the demand of the Government its interest in the plant and substation at Gorge. It further agreed to maintain the plant and to pay, during the time the Government was taking power under the contract 6 per cent interest on the actual cost of the Warrior extension and the Warrior substation, and when the Government was not taking power under the contract to pay the Government for the power generated by said extension. Here, then, is property of the Government located where it has a going value as compared with a junk value received for most all salvaged property acquired during the war emergency, and maintained without cost to the Government under an agreement from which the Government will always receive a return until it demands the Alabama Power Co. to purchase it at its fair value. There has been no criticism

of the rate at which the Alabama Power Co. agreed to furnish power, but on the contrary Colonel Joyes testified the Government got it on very favorable terms.

Reference is made to the company's letter of November 6, 1917, to the Ordnance Department, with regard to the building of an extension to the steam plant at Gorgas. It was soon found that this extension would not furnish the sufficient power required by the Government and was also based on financing through the War Credits Board. Here again those who wished to be fair could have learned that the program desired by the Government was different from that which was understood by our company, and, of course, resulted in an increased expenditure.

Certainly no one in Alabama who wishes to be fair need repeat the error of the Graham report to the effect that in 1917 we had at Warrior an old plant with indifferent machinery. To the contrary, our plant was just completed and modern to the last detail when the Government took up the matter with us. Those officers of the Government who know the real facts about the matter have but recently spoken plainly and finally that this contract was one of the best from the Government's point of view made during the war period. The Graham report refers to our system as being a small system, poorly equipped before the war, which every citizen of Alabama knows is wholly incorrect. All of our plants and lines were new and modern and had only been in service some three or four years. In this idea alone lies the principal error of the Graham report, for it was on that erroneous assumption that the committee undertook to criticize this contract. All of the facts have been brought out at the present hearing. In addition to the investment which the Power Co. had in its plant at Gorgas prior to the war, it has many lines and stations directly connected with that plant, at the same time having a large investment in a coal mine to obtain the coal required for its operation. The plant is absolutely essential to enable the company to carry out its public-service obligations in times of low water on the Coosa River. There is no possible place at the site for two plants. The plant extension in which the Government has an interest is so connected with the situation that it would not be possible to operate them separately. This was the view from the first and was just in line with the Government's policy in many plants of this nature, as well as for shipbuilding, munitions, etc., whereby existing facilities of manufacture were extended to meet war needs and at the same time enable the Government to dispose of them to the best advantage after the war. It was pointed out at these hearings by one of the Government officers that in respect to the greatest number of these Government contracts the owner of the land had the right to refuse to buy the additional facilities, and if he refused, they should be removed by the Government, whereas in the case of our contract we obligated ourselves to buy the additional facilities at fair value to be fixed by arbitrators, thus insuring that the Government is bound to receive a very substantial value for them.

If Congress should direct the condemnation of only a part of our land at Warrior it would destroy the usefulness of our entire plant there for any other purpose, rendering our investment in coal mines practically useless to us and imposing obligations and burdens upon this company which would be very serious. It would affect our ability to serve many customers of the company if their power supply were taken away without any opportunity to obtain other power for their continued operation. In other words, we wish to point out definitely the very serious element of public interest involved in such a course.

THE ATTITUDE OF THE PUBLIC IN ALABAMA TOWARD COMPANY.

11. In December, 1921, the Power Co. invited many citizens of the State to the dedication ceremony of the Mitchell Dam, now under construction on the Coosa River. There were more than 500 representative citizens in attendance at the ceremony. Public comments from every section of the State commended the Power Co.'s public-spirited attitude in its undertakings.

After describing the dedication ceremony, this statement is made in the Montgomery Advertiser of December 20, 1921:

"Mr. Martin expressed regret that Gov. Thomas E. Kilby found it impossible to be present and introduced Attorney General Harwell G. Davis, delegated to represent the governor on the occasion. Mr. Davis delivered a message from Governor Kilby in which the executive expressed appreciation of the great serv-

facilities for such plants, including water intake and discharge tunnels and foundations for a three-unit plant. In order to provide for the coal necessary for the operation of the plant the Alabama Power Co. financed the coal operations then and now being conducted immediately at the plant. These facilities made it possible for the company to generate steam power at the lowest possible cost to supplement the Coosa River power in times of low water.

When the Government decided to construct the nitrate plant during the war, it is a matter of record in certain hearings that the existence of this steam plant, together with the large hydropower plant of the company on the Coosa River, was the controlling factor in the location of the nitrate plant at Muscle Shoals, because it was necessary to have a large amount of power within six months. No water-power plant could be erected at Muscle Shoals within less than three or four years, and a new steam plant could not be erected at Muscle Shoals in time to meet the requirements of the Government at nitrate plant No. 2. Government officials then turned to our steam plant and to our system in general for this immediate supply of power. It was agreed that we would build a transmission line 90 miles to Muscle Shoals, and we did build the line, bringing it into operation within less than five months, thus enabling the Government to obtain power in advance of the schedule on which the work was then proceeding. The company was serving many industries, and at least 80 per cent of its power was being used by those which were classed as essential for the production of materials for use in the war. It was, of course, within the power of the Government to suspend the delivery of energy to any of these consumers, but it was admittedly of great importance by Government officials that this service be not interrupted.

It was also decided that the Alabama Power Co. at times could furnish some power, but it did not have sufficient capacity in order to enable the company to deliver continuously the amount of power needed at the nitrate plant. The Warrior facilities for installing a second unit were so far advanced that six months or more in time would be, and were, saved by making the extension of that plant. Time, as we all know, was of the greatest importance in the war period and all things made subordinate to that important factor. Therefore the Alabama Power Co. was directed in December, 1917, by the Nitrate Division of the Government, to build a transmission line on rights of way of that company for the United States, and to erect at Warrior on its lands for the United States, an extension to its Warrior plant. At the same time the Alabama Power Co. agreed, at the request of the Government officials, that if the law permitted the Government to sell its interests in these facilities, the company would purchase them at fair value. The desire of the Government was to proceed in the quickest possible way to obtain power, having also in view limiting its investment and making a plant which would obtain for the Government the best possible salvage after the war. Those Government officials who know the facts, as Secretary Weeks, Major General Williams, Colonel Joyes, and Major Burns, have raised no question whatever as to the fairness of this contract with the Government and have expressed the view that, aside from the legal phase of the contract, the Government has a moral obligation to carry out in its agreement with the power company.

In the very beginning of the negotiations the Alabama Power Co. explained that the cost of an extension of the capacity desired by the Government would be more than the demands of the company warranted; however, if the Government would aid it in securing the funds with which to make such an extension that it would do so. Effort was made by the Government officials to advance funds with which to build the plant, but it was found that there was no law under which it could be done. It would affect our ability to serve many customers of the company if their power supply were taken away without any opportunity to obtain other power for their continued operation. In other words, we wish to point out definitely the very serious element of public interest involved in such a course.

THE ATTITUDE OF THE PUBLIC IN ALABAMA TOWARD COMPANY.

11. In December, 1921, the Power Co. invited many citizens of the State to the dedication ceremony of the Mitchell Dam, now under construction on the Coosa River. There were more than 500 representative citizens in attendance at the ceremony. Public comments from every section of the State commended the Power Co.'s public-spirited attitude in its undertakings.

After describing the dedication ceremony, this statement is made in the Montgomery Advertiser of December 20, 1921:

"Mr. Martin expressed regret that Gov. Thomas E. Kilby found it impossible to be present and introduced Attorney General Harwell G. Davis, delegated to represent the governor on the occasion. Mr. Davis delivered a message from Governor Kilby in which the executive expressed appreciation of the great serv-

ices rendered by the man for whom the dam was named; of the value of navigation opened by this construction, as well as the energy created.

"President A. G. Patterson, of the Alabama Public Service Commission, speaking for that body, said that Alabama recognizes the necessity that justice and equity be done both to the utility corporation and to the people of the commonwealth; that such institutions are properly regarded as servants of the people, and it becomes the duty of the commission of which he is a member to place a reasonable valuation of such properties and then to permit these utilities to make a fair return upon their investments. He said that the commission stands between the utilities and the people.

"Oscar Wells, president of the First National Bank, of Birmingham, spoke of the great value of the service to be rendered by the further harnessing of the Coosa. This power, he said, is not lessened by use, nor can it be stored up for future generations by not being used. He spoke of the value of the industries to be made possible by the electric power to be produced at Mitchell Dam, which will be distributed over 1,500 miles of high-tension lines serving more than 16,000 consumers in 60 cities and towns of Alabama."

The Birmingham Age-Herald of December 20, 1921, contained the following:

"In the absence of Governor Kilby, who expressed his desire to be present but his inability to attend through the speaker, Attorney General Harwell G. Davis made a short talk in which he expressed pleasure as an official of the State to be present at a ceremony connected with the development of the resources of his State. He referred to the vision of Mr. Mitchell in sensing the measure of the water powers of Alabama and to his stoutness of heart in putting over the enterprise in spite of many difficulties.

"He forecasted the time when, with the completion of the Mitchell and the other dams to be built, the Coosa would be navigable from Rome, Ga., to the Gulf and carry Alabama products over all the seas.

"A. G. Patterson, president of the Alabama Public Service Commission, said monarchs of Egypt had built the Pyramids in order to perpetuate their memory, but that Mr. Mitchell had built to serve mankind. He thought Mr. Mitchell's work was much the greatest. Mr. Patterson outlined the duties of the commission with respect to utilities, saying it was to see that they gave service to the people, on the one hand, and that, on the other, they were enabled to give that service by being allowed to earn a fair return on a reasonable estimate of the value of the service."

The Labor Advocate (Birmingham) of December 24, 1921, contained the following:

"At 11 o'clock Monday morning over 500 invited guests of the Alabama Power Co. arrived at the site of Mitchell Dam. This dam is located on the Coosa River in Chilton County and is an ideal location for a stupendous object of the kind. At 12 o'clock President Martin called the assemblage together and made an eloquent and statistical address as to what the company proposes to do at this place. He was followed by the following speakers: Attorney General Davis and A. G. Patterson, president of the Alabama Public Service Commission, and Oscar Wells of the First National Bank of Birmingham."

The Chilton County News of December 22, 1921, contained the following:

"Last Monday one of the largest audiences gathered at Mitchell Dam that has assembled in Chilton County in many days to do honor to the memory of Mr. James Mitchell as one of the greatest promoters of water power this country has possessed in many years. * * *

"Hon. Harwell Davis was present and expressed Governor Kilby's regrets at being unable to attend owing to pressing business reasons. Mr. Davis, in a few well-chosen remarks, called attention to what a wonderful man of vision Mr. James Mitchell was.

"Mr. A. G. Patterson, chairman of the Public Service Commission of Alabama, was also present and briefly stated how the public service commissioners had endeavored to treat the great company fair and at the same time see that the public received their share of the resources. He also did not fail to show the great responsibility of the commission of which he is chairman. He said that he was glad to see these great developments and of their usefulness.

"Mr. Oscar Wells, president of the First National Bank of Birmingham, made the last address of the occasion. He stressed that we were here to honor Mr. Mitchell. He also stated that bankers were always interested in such wonderful development. He said that with such enterprises as Mitchell Dam completed that economy could exist in every industry in the country and

greater developments in agricultural pursuits would be one of the important factors as well as all others."

The Birmingham News of December 18, 1921, contained the following:

"The benefits to the people of Alabama from the developments at Mitchell Dam are threefold: An addition of 100,000 horsepower for developing industries and the resources of the State, increasing the distance over which the Coosa River can be navigated the year round, and marking a long step forward toward the final developments which will open the whole stream to year-round navigation; in preventing damage each year from floods, which have at times greatly hurt the agricultural sections and many of the towns along the river."

The Gadsden Daily Times-News of December 19, 1921, contained the following:

"Several hundred representative citizens of northern, central, and southern Alabama attended the dedicatory exercises at Mitchell Dam on the Coosa River near Verbena on the Louisville & Nashville Railroad to-day. * * *

"The Alabama Power Co. has been for several years expending about \$5,000,000 per annum in development and this schedule is forecasted for several years to come. * * *

The following comments appeared in the Birmingham Age-Herald of December 15, 1921:

"About ready to pour concrete in Mitchell Dam near Verbena. That close to seeing the mighty weight of the Coosa tumble into turbines and generate another 120,000 horsepower of electric current to drive machinery, operate car lines, and light cities and homes in Alabama.

"Money at the rate of \$5,000,000 per annum has been pouring into Alabama and counting for Alabama development in this one avenue of natural-resource exploitation. Money at that rate will continue to come into Alabama during a series of years.

"At first one does not sense what things like this mean. In time, as they emphasize the individual's prosperity through that of his section, light begins to shine and big men and big institutions come in for correct estimate of their value in the general plan.

"It is no small thing to be placing \$5,000,000 per annum in a State in ways that count for the permanent good. Amounts like that are not obtainable by small men, small concerns, isolated effort, individual exertion. They come only when aggregate capital is interested and feels confidence in the people and places where the investment is to be made. * * *

"Alabamians are no longer afraid of a man or concern on account of bigness. They have become broad-minded and high-thinking themselves and they welcome other big men, big brains, and big capital. It is well they do."

12. On account of the power shortage prevailing during the fall of 1921 and also to meet the needs of additional power during the present year, the Secretary of War leased the Government steam plant at Sheffield to the Alabama Power Co. We have, for some time past, rendered assistance to the power companies of Georgia, North and South Carolina in times of drought and emergency, and the lease of the Sheffield steam plant will enable this service to be continued. Following the lease of this plant by the Secretary of War, approval was expressed in almost every section of the South on the fact that the power lines of this company had been connected with the lines of the power companies of Georgia, thus completing the interconnection of the systems of the companies in the Southeastern States. In view of the statements made by one of the Members of Congress from Alabama regarding the public attitude toward our company, we wish to refer to the following comments concerning the leasing of the Sheffield steam plant:

The Raleigh News and Observer of October 28, 1921, carried the following item, which shows the difficulties experienced by industries and the public generally before the lease of the Sheffield steam plant, the necessity for additional generation capacity in the Southeastern States, and the means adopted by the power companies in this section of rendering assistance to each other in cases of emergency:

"Beginning to-day, the Carolina Power & Light Co. will furnish full service to 60 large cotton mills and more than a score of other important industries that have been forced to shut down for two and one-half days each week during the present month because of lack of current.

"Resumption of maximum service has been made possible by arrangements that have been made to receive surplus power from the Alabama Power Co. and

by the operation of the company's auxiliary steam plant at Method, which has been idle during the summer and fall on account of the drought.

"Water for the operation of the steam plant will be hauled from Crabtree Creek over the Seaboard Air Line in tank cars. * * * Several weeks ago the company made efforts to secure the water needed for the operation of steam plant from wells, but has been able to secure only about 50,000 gallons a day, approximately one-fourth of the amount required. * * *

"Although power companies in this section have frequently interchanged current, the Carolina Power & Light Co. is the first to receive current through several intervening transmission systems. Current is not actually passed from Alabama to North Carolina, each of the intervening companies simply giving the company next in line an amount equivalent to that received.

"The linking of these large lines so as to make possible the interchange of current is in line with investigations made by the Government during the war with a view to the greatest utilization of hydroelectric power, but the scheme has never before been put into operation. * * *

The following is an excerpt from an item appearing in the Birmingham Age-Herald of October 26, 1921:

"The Alabama Power Co. began to-day transmitting 5,000 to 10,000 kilowatts of steam power to the Georgia Railway & Power Co. for partial relief of the power shortage in North and South Carolina, a distance of some 400 miles from points where the power is generated. This is not sufficient to meet present urgent requirements in those States, and on account of the drought it may be necessary to discontinue such transmission of power at any time."

The following is an excerpt from an editorial of the Mobile Register:

"Owing to the long season without quantity rainfall many mills in North Carolina, which derive their power from water flow, have been idle because the streams are flowing at far below normal capacity, and thus have greatly lessened their ability to produce electric current. In this emergency it has been found feasible to utilize the excess current produced in Alabama by transmitting it through a number of intervening plants to Charlotte and other industrial centers. By this means a number of mills have been enabled to resume activity and great numbers of people have been given employment. This is an achievement worth while, and indicates the wide benefit that may follow the development of the rest of Alabama's potential, including that of Muscle Shoals. Alabama's possible distribution of power covers many States, not only adjoining States, but those lying several hundred miles distant."

An editorial of the Atlanta Constitution of October 28, 1921, says, among other things:

"Hydroelectric power interests in the States of Georgia, Alabama, North and South Carolina, and Tennessee have joined requesting the War Department to put the Federal-owned steam plant of Sheffield, Ala., into operation at once to provide additional electric current for power as a safeguard against the threatened deficiency resulting from the present drought throughout the Southeast.

"The situation is similar to that which seriously crippled industry in this section in the fall of 1918, when a protracted rainless season caused such a diminution of hydroelectric power production that extreme measures had to be adopted to guard the supply.

"In north Georgia it was necessary for all power consumers to curtail their consumption. Many of them at great expense were forced to rehabilitate the steam plants which they had previously abandoned, and others were driven to the extremity of installing entirely new steam power equipment in order to keep their factories running. * * *

"Fortunately, the various power companies in five Southeastern States involved have cooperated in such a way that one system can be connected with the feed wires of any other, the effect being the same as though the entire interlocking and interchangeable system were fed by a single great source of electric supply."

The following is an excerpt from an editorial of the Birmingham Age-Herald of October 27, 1921:

"The steam power plant at Sheffield, built by the Government in connection with the nitrate works there, has a capacity of 60,000 kilowatts, or 90,000 horsepower. It is completed and ready to operate. It should be started.

"Rivers are low in Alabama, the Carolinas, Georgia, and Tennessee. The Alabama steam plants operated by the Alabama Power Co. are furnishing what

power can be spared to help out the distressing situation in the Carolina mill sections. If the Sheffield plant is also brought into service, Alabama's steam power will be doubled and she can transmit that much more power to prevent industrial and financial losses in these sister States.

"The Secretary of War has been asked by Alabama's public service commission and the commissions of other States to allow the operation of the Sheffield plant. The request should be granted and the plant put into immediate service."

The following is an excerpt from an editorial of the Union Banner of Clanton, Ala., on November 17, 1921:

"This action of the Alabama Power Co. is deserving of praise in that it means that many people will be restored to their work and their names placed back on weekly pay rolls by the resumption of operations by mills and factories upon which they depend for the daily bread and clothing of their families. It means that the consumption of much raw cotton by factories in those States will continue, which in turn will draw that raw cotton from the markets of the South. The beneficial influence of this step of the power company will be felt directly in many cases that the average person may never think about."

The following is an excerpt from an article in the Washington Post of October 30, 1921, quoting an Associated Press dispatch from Charlotte, N. C.:

"What is described as the 'first superpower zone' was put into actual operation this week, according to announcement to-night from the general offices of the Southern Power Co. here, through the utilization of surplus hydroelectric power in Alabama. Half a dozen textile mills in central North Carolina, which have been idle for weeks because of lack of electric power resulting from drouth, were enabled to resume operations, says the announcement.

"The Alabama Power Co. transmits power to Central Georgia Power Co. That company puts upon the lines of the Columbus Power Co. a like amount of its own power. Similarly the Columbus company transmits power of its own generation to the Georgia Railway & Power Co., which in turn through its tie-ins with the Southern Power Co., delivers to the local company a like quantity of current. The Charlotte company then delivers to the Carolina Power & Light Co. an amount of power equivalent to that which is received from its Georgia connection."

The Birmingham News of December 18, 1921, contained the following:

"Recent payment of huge sums of money by corporations doing business in Alabama affords signal and immediate relief to the educational institutions of the State. * * *

"Whoever, therefore, has been in the habit of constantly prating of the evils of trusts and corporations and the iniquity of 'foreign capital' should pause a while. These so-called foreign moneys when they are invested in Alabama industry and development become Alabama moneys. The interests promoting them become our common interests. They plant their roots here with a view not only to get gains but to grow along with us, contributing their pro rata share to the upkeep of the government.

"There are two kinds of capital—the sort that takes all and gives nothing and the capital that practices reciprocity. A fool should be able to discriminate. The capital that creates new pay rolls and that develops a State's natural resources and that pays substantial taxes into municipal and county and State treasuries is benevolent capital. There is nothing foreign about it. It makes no matter whether its stockholders live in New England or old England, whether in Chicago or Zanzibar. They have cast in their lot with us for better or for worse."

13. There might be added many other statements to show the attitude of the public toward this company shortly before it filed its offer to complete the Muscle Shoals project. Expressions which have come to this committee from the public in Alabama have evidently been largely worked up by propaganda.

Shortly after the filing of Mr. Ford's offer articles appeared in the papers of Alabama to the effect that he intended to build cotton mills, automobile factories, nitrate plants, and other industries in a 75-mile city along the Tennessee River; would build or take over railroads traversing the State, open coal mines, ore mines, steel mills, make aluminum, employ a million men, and add to the wealth, prosperity, and happiness of every section of Alabama and of the South. Many of these statements were doubtless printed without any authority from Mr. Ford.

At the same time, there are many citizens of the State moved only by public interest who feel that our offer should be accepted. Still others think the

Ford offer should be accepted but are not in sympathy with the propaganda against this company.

The governor of the State in a recently published statement said with reference to our contract with the Government concerning the Warrior plant and of the record of development we have made in the State:

"We are told that the Alabama Power Co. owned the site on which the Gorgas plant is located; that it owned coal mines from which fuel is now obtained for the operation of the Gorgas plant; and that there now exists an agreement in writing between the Federal Government and the Alabama Power Co. whereby the Alabama Power Co. obligated itself to purchase and the Government obligated itself to sell the Alabama Power Co. the Gorgas steam plant when it ceased to be useful to the Federal Government.

"I believe contracts between the Government and private enterprises or corporations are just as sacred as contracts between individuals. The State of Alabama has only recently gone into the courts in an effort to maintain the terms of a contract made in good faith between the State and a private corporation. If the Government will not carry out its contracts, how can we expect individuals and private corporations to carry out their contracts? * * *

"Opponents of the power company can see nothing good in its past, present, or future, forgetful of the tremendous benefits the State has derived from the development by the company of water powers that ran to waste since the beginning of time until the money of the company served to harness it for the use of the State and its people * * *."

In February 16, 1922, issue of the Birmingham News this editorial statement is made:

"In order to carry on the matter and complete it, President Martin made a clean-cut, business offer to complete the Wilson Dam without cost to the Government; with the initial installation of 240,000 horsepower electrical equipment, to furnish out of this 100,000 horsepower free to the Government for operation of the nitrate plant if the Government desires to operate it, or to furnish to the designated agent or lessee from the Government; to take out a license under the Government general water power bill, and the lease on the Muscle Shoals plant to be for 50 years instead of 100, as proposed by Ford; to pay \$5,000,000 for the Gorgas steam plant and transmission lines; to furnish power free to operate the lock gates on the dam in aid of navigation, and to deliver over to the Government whenever national emergency exists the whole project—and to commence work at an early date. Moreover, if the Government should decide not to manufacture nitrates, then the 100,000 horsepower of current set aside for Government use will be purchased from the Government."

And the following was contained in the editorial of Sunday, February 5, 1922, of the Birmingham Age-Herald:

"The Henry Ford offer for Muscle Shoals, as submitted to Congress by Secretary Weeks, is undoubtedly a great thing for this section of the South.

"On the other hand, as a whole Mr. Ford is asking much from the Government and is extending out into the territory of the Alabama Power Co.

"The bid calls for his acquirement from the Government of the Gorgas steam plant, which was first built by the Alabama Power Co. and added to by the Government during the excitement of war. The Alabama Power Co. is now operating this plant and it seems to be absolutely necessary for the power company to have it to supply the current it has contracted for during low-water periods in the Coosa River.

"This plant is some 90 miles from Muscle Shoals. It is connected by a power line. But this plant is also connected with the Alabama Power Co.'s lines running throughout the State, and which supply the factories and the mines and all sorts of manufacturing enterprises in the State with electric power. Should the Government give this steam plant to Mr. Ford, the Alabama Power Co. would be seriously embarrassed, and naturally it would fight for what it has always considered its own.

"Mr. Ford's bid to the Government, which includes this Gorgas steam plant, is emphatic in that the Government was to accept his entire proposal or none of it.

"This will be a serious problem before Congress—to take away from an actual going concern, keeping the industries of this State in operation, its source of power, to include it more or less as a gift to a prospective concern which can not get in full operation for several years. In other words, can the

Government afford, by an act of Congress, to more or less smash the Alabama Power Co. and the manufacturing interests of Alabama to humor Mr. Ford in his big Muscle Shoals proposition?

"As Mr. Ford's proposition reads, it would appear that he wants everything or nothing, and that he would deprive the Alabama Power Co. of its present main source of continued electric current—the Gorgas steam plant. This does not look fair to the writer. Congress should find means of adjusting the matter between the Ford interests and those controlling the Alabama Power Co., which has become one of the greatest developers of Alabama.

"It would strike the fair-minded man that Mr. Ford should be satisfied with the water-power development which the Government is to pay for that he may operate it on a small rental.

"The Gorgas plant was the work of the Alabama Power Co., built by it, with Government aid. The Alabama Power Co. has operated it all the time. It is a necessity with this company. Therefore, why should the Government dump it in, so to speak, as more or less of a gift to Mr. Ford, when the Detroit man recently said in a published interview that he was opposed to steam-power electric plants and wanted to have nothing to do with such?

"The Ford Muscle Shoals proposal by itself is undoubtedly a great one for this section of the country and for the interests of the Government; but there is a limit to that which the Government should turn over to him; and the Gorgas steam plant would seem in honesty and justice to be outside of that limit.

"Let Mr. Ford take over Muscle Shoals—we are all for it—but don't let us, in our eagerness to get Mr. Ford's money and industry down here, strangle the Alabama Power Co."

The Chamber of Commerce of Birmingham, the largest city in the district, on August 16, 1921, adopted the following resolution:

"Following the report of the committee appointed to look into the development of the Muscle Shoals project, which report was made by Mr. Thornton Estes. It was moved by Mr. Donald Comer and seconded by Mr. Murray Brown that the board of directors of the chamber of commerce respond to the appeal of the Tennessee River Improvement Association for cooperation in the work which it is doing in the interest of the completion of the dam or dams on the Tennessee River adjacent to the Muscle Shoals, for the creation of hydroelectric power and the manufacture of fertilizer, by undertaking through subscription to raise the amount requested; and that the president either continue the present committee or appoint another for that purpose.

"The range of the discussion included the proposal of Mr. Henry Ford made to the Secretary of War, and, while it seemed to be the best one available for the purposes herein recounted, it was the opinion of the members of the board of directors that the best offer should be accepted if others were made. It was also made clear in the discussion that the amount of money which the Chamber of Commerce of Birmingham will undertake to raise, \$5,000, is for the purpose of helping the Tennessee River Improvement Association to defray the legitimate expenses of presenting to Congress and to Government officials all of the facts with respect to the completion of the dam and the utilization of its power for the benefit of the producing interests throughout the country, upon which use the appeal of the Tennessee River Improvement Association for funds was based. The motion prevailed."

The foregoing resolution was reaffirmed by the chamber of commerce at a meeting held early in March, 1922, as being its attitude toward this development.

The Birmingham News of February 18, 1922, contained the following editorial:

"The News stands to-day where it has always stood, a believer in the great things to come if Ford is given the shoals. The News has never ceased to give the preference to Ford in every particular. Even in the editorial of which Mr. Holland so bitterly complains, the News said that, despite the fact that the Alabama Power bid seemed very much better from a purely governmental financial standpoint, this paper still believed the acceptance of the Ford offer would bring to this whole section its greatest development and would open a vista of possibilities more glorious than even its most ardent propagandists had ever dreamed. The News said, too, in that editorial that no matter what the outcome was, one man deserved the credit for the development that was now definitely assured, and that that man was Henry Ford, whose vision had rescued the Muscle Shoals properties from the Federal junk pile to make them the center of the South's great future. * * *

"Frankly, the development of Muscle Shoals to its greatest possibilities means more to the Birmingham News than does Henry Ford, the Alabama Power Co., James B. Duke, or any other man or interest. The whole future of this section is wrapped up in this great development; and while the News believes its greatest possibilities lie in the magic hand of Henry Ford, this paper is always open to conviction, and whoever can achieve the greatest things at Muscle Shoals, that man or that interest is entitled to the properties, provided he can make the Government a reasonably good offer for them and can and will properly guarantee that he will carry out in good faith the promises he has made. * * *

"The development of Muscle Shoals is the greatest thing in the immediate future for this State, the South, and perhaps the whole country.

"* * * Muscle Shoals is bigger than the Alabama Power Co., it is bigger than Henry Ford. Its development either by Henry Ford, the United States Government, or the Alabama Power Co. is now definitely assured, due to the vision of Henry Ford, and the News rejoices in that fact. And while the News wants Ford to handle the development and believes sincerely that that would be the best thing for the country, the News is willing to abide by the judgment of Congress, which, after careful study of the whole situation, will make the award to that man or interest who will best safeguard the rights of the United States Government and its people and who promises to bring the greatest blessings to mankind from the development that is certain to ensue, no matter who gets the properties."

The Carbon Hill Journal, Carbon Hill, Ala., of March 9, 1922, contained the following editorial:

"Bibb Graves, who thinks he is a candidate for governor, has sent the Journal a copy of a Montgomery paper containing the address he delivered before the mass meeting in that city last week. We refer to it as an 'address' through courtesy. As a matter of fact it was a vicious, narrow-minded, unfair, and scurrilous attack on one of the greatest industries in the State—the Alabama Power Co. If Bibb Graves sees fit to indorse the Ford bid for Muscle Shoals, that is his right, and no fair-minded person would think of denying him this privilege. But just how he expects to promote the Ford interests, and incidentally his own, by such an unwarranted attack on the power company is not quite clear on the surface of things. The Ford bid will have to stand or fall on its merits, and no amount of abuse of another bidder by a cheap, office-seeking politician courting popular favor is in the least going to enhance Ford's chances of securing Muscle Shoals.

"Bibb Graves may be a smart man, although his Montgomery address would indicate otherwise; he has some things to learn, and among them is the fact that he can not build himself up by tearing others down. Any man guilty of employing such contemptible methods to advance his own selfish interests is utterly unfit to fill the exalted office he seeks to obtain. As governor he would be far from a credit to the State."

Respectfully submitted.

ALABAMA POWER Co.

By T. W. MARTIN, President.

(Thereupon the committee went into executive session, after which it adjourned until Friday, March 10, 1922, at 10.30 a. m.)

COMMITTEE ON MILITARY AFFAIRS,

HOUSE OF REPRESENTATIVES,

Friday, March 10, 1922.

The committee met at 10.30 o'clock a. m., Hon. Julius Kahn (chairman) presiding.

STATEMENT OF COL. J. W. JOYES, BUREAU OF ORDNANCE, UNITED STATES ARMY.

The CHAIRMAN. Gentlemen, Colonel Joyes, of the War Department, is here this morning, and I think the papers show that the colonel was the gentleman who on behalf of the Government entered into negotiations with the Alabama Power Co. at the beginning of the expansion of the nitrate plant at Muscle Shoals.

Colonel, can you explain to the committee, in your own way, just exactly what the dealings were which you had with the Alabama Power Co. along in 1917 or 1918? Did you begin negotiations with that company?

Colonel JOYCE. Practically the first I ever heard of the Alabama Power Co., except in reading of some of the previous hearings before committees on other matters—practically the first I heard of them was when we received from the American Cyanamid Co. the first proposal to erect a nitrate plant for the Government, at its request, and that proposal, after setting forth a description of the plant to be put up and the terms, discussed the question of how to provide power.

It started out with the premise that, if the first half production of the plant were to be achieved within the promised time of six months from breaking ground, it would be impossible to provide power in a plant started and built ab initio in that time. The power requirement, as you all know, for the cyanamid process is very great, and a power plant takes time to build. So the proposal of the American Cyanamid Co. said that the only way they could see to be sure of a supply of power in time for the operation of the first half production of the nitrate plant within six months from date of breaking ground would be to go to an established system where a supply of power could be had, and then to go ahead and build the power plant for the remainder of the power, which it was hoped could be done by the time that the remainder of the plant production was ready. They suggested in that proposal that an arrangement might be made with the Alabama Power Co., and I think said that the matter had been opened with the Alabama Power Co., and that company had been told that they might expect to receive an inquiry from the Government.

Now, it was at that time represented in the American Cyanamid Co.'s proposal that the Alabama Power Co., unquestionably, did not have a sufficient supply of uncontracted power or unsold power throughout the year to meet the demands for the first half production of the nitrate plant, but that at certain seasons of the year, and especially the season when the first half production was expected to begin, there would be available about the 30,000 kilowatts that was desired out of the run of the river. I am speaking now of the Coosa River and the Alabama Power Co. system. In other words, that at the time when we needed that first supply of power it would be available over and above contract requirements, at least over and above the binding contract requirements that could not be set aside.

The CHAIRMAN. When was this?

Colonel JOYCE. This was in the fall of 1917, sir. I forgot that. The first proposal that we received from the American Cyanamid Co. was in October, 1917.

The CHAIRMAN. Now, let me ask you this question: What were you doing at that time?

Colonel JOYCE. I thought that was of record. I was at that time chief of the nitrates division of the Ordnance Office, at that time called "Division T" for brevity. We preferred not to give it any name. That was the division of the Ordnance Office which was charged with the conduct of all matters relating to nitrogen fixation under the Ordnance Department.

The CHAIRMAN. Were you stationed at Muscle Shoals?

Colonel JOYCE. No, sir; I was stationed at Washington.

The CHAIRMAN. And these letters came to you at Washington?

Colonel JOYCE. Yes, sir.

The CHAIRMAN. When did you go down to Muscle Shoals, or did you go down there?

Colonel JOYCE. The first trip I made down there must have been about, probably, August or thereabouts.

The CHAIRMAN. August of 1917?

Colonel JOYCE. July or August of 1917; yes, sir. I went down there at that time, as I went to a number of other places, looking out for a site for the first installation to be made under the \$20,000,000 appropriation for nitrate supply, section 124 of the national defense act.

Now, coming back to Mr. Washburn's (the Cyanamid Co.'s) proposal, after showing that the Alabama Power Co. would have available at the time we wanted it a supply of power to meet our needs but could not continue to supply that throughout the year without further construction, he went on to say that he thought the Alabama Power Co. already contemplated an extension of their station but could not make it at the present time on account of financial conditions, and that possibly we might arrive at some working arrangement with them.

The CHAIRMAN. What position was Mr. Washburn in at that time?

Colonel JOYES. President of the American Cyanamid Co.

The CHAIRMAN. Was he connected with the Alabama Power Co. at all?

Colonel JOYES. I had no reason whatever to believe that he was, and I have since looked into the matter considerably and heard a great deal of investigation in the matter, and I am satisfied he was not, except possibly as a stockholder. He had been previously connected with it as an official.

The CHAIRMAN. But not at the time that he spoke to you?

Colonel JOYES. No, sir; I do not know that of knowledge, you understand, but I am convinced that he was not.

The CHAIRMAN. But he, at least, suggested to you that it might be possible to make a working arrangement with the Alabama Power Co.?

Colonel JOYES. Yes, sir; and then as we commenced negotiations with Mr. Washburn he submitted in succession several different offers which were changed to meet or to come a little nearer to meeting the ideas of the officers of the Ordnance Department and of the War Department, and along about, I think, the 5th or 6th or 7th of November, we received a communication from the Alabama Power Co. making a statement of their power situation, premised upon this demand which, according to my remembrance at this time, was communicated to them by Mr. Washburn.

The CHAIRMAN. You say "we received"; whom do you mean by "we"?

Colonel JOYES. I think the letter was addressed to the Division T, Ordnance Department, which was my division. It came direct to me, in other words. I am quite sure of that, sir. That letter is in the record either of this committee or some other, and probably several, and it will show by its address, I believe, that probably Captain Gaillard can tell you for sure.

Captain GAILLARD. No, sir; I am under the impression it was addressed to you but I am not sure.

Colonel JOYES. I have not it with me, but it is in the record in several places.

Mr. MCKENZIE. Is it not true, Colonel, that a number of those communications were addressed to the Chief of Ordnance of the United States Army?

Colonel JOYES. They might have been.

Mr. MCKENZIE. And not to any particular officer?

Colonel JOYES. Some of those offers that came along about that time were addressed in one way and some in another.

Mr. MCKENZIE. That is true.

Colonel JOYES. Sometimes they would be addressed to the Chief of Ordnance and then in parenthesis, or in the line below, "Division T," or "Division so-and-so." There was nothing in that, I believe, to have any particular significance, Mr. Kahn. I mean to say that the form of address and just where it came did not affect any of the negotiations in any way.

The CHAIRMAN. At any rate the letter reached you as the head of that Division T?

Colonel JOYES. It came direct to me, at any rate.

The CHAIRMAN. Do you know where that letter is at the present time.

Colonel JOYES. Oh, yes; it is in the Ordnance Office, in the correspondence files.

The CHAIRMAN. Will you kindly put it in the hearings of this committee at this place?

Colonel JOYES. Very good, sir.

The CHAIRMAN. Now, continue from that point, if you please.

Colonel JOYES. As I said, we had several different successive proposals from the American Cyanamid Co., and they were considered at conferences in the office of the Chief of Ordnance, mainly, running up to the evening of November 13th when the final decision was made, around about midnight, a little before or a little after, and then we started work at once.

Mr. Washburn took the train the next day to New York, with an understanding that as soon as we could wire him that the agreement reached in the office of the Chief of Ordnance had the approval of the War Industries Board, he would get on the train immediately with some of his engineers and people and go down to Muscle Shoals, and that I would meet him there. So that within two or three days or so after that conference I started for Muscle Shoals, and I believe at that time there was no communication of any consequence sent to the Alabama Power Co. I think we left that until we could decide upon the location definitely and get the nitrate plant started so that it could move along; but I may be wrong about that. We will have the files searched and if there

was any communication sent to the Alabama Power Co. in that time in reply to their proposal of about November 5, we will have it put in the record along with that.

The CHAIRMAN. There is a letter of November 6, 1917, addressed to you, and that is in the hearings, and I will have the clerk read it and see if you recognize it. It is the letter that Mr. Dent offered the other day when he was before the committee.

(The clerk read the letter referred to as follows:)

NOVEMBER 6, 1917.

Col. J. W. JOYES,

Division T., Ordnance Department, Washington, D. C.

DEAR SIR: In a conference to-day Mr. Frank S. Washburn, president of the American Cyanamid Co., asked the Alabama Power Co. to formulate a definite proposal as to what it was prepared to do in the way of supplying power to the proposed new nitrate works at Muscle Shoals, Ala., on the Tennessee River.

Until such time as there shall have been definitely determined the details of the Government's requirements we are only able to formulate a proposal along general lines, and one which may be considerably modified as to details in carrying it out.

The financing of such an installation at this time would not be warranted by the present needs of the Power Co., but it is prepared to cooperate in every possible way with the Government in the undertaking which you have in view.

We estimate that the necessary additions to our Warrior River steam plant, and the transmission lines and substation necessary for delivering power at Muscle Shoals, will cost approximately \$2,250,000. If the Government will finance the undertaking and assist in deliveries the power company will be prepared to install with maximum urgency the necessary steam plant, substations and transmission lines. The company will supply 30,000 kilowatts delivered to the Muscle Shoals substation at a combined energy and demand charge of 7 mills (0.007) per kilowatt hour.

The Power Co. will undertake to set aside 3 mills (0.003) per kilowatt hour for all energy supplied under this proposal, until the Government has been reimbursed for all sums advanced to the company in this connection.

We understand the power requirements of the proposed nitrate plant, so far as this company is now concerned, to be about 30,000 kilowatts, which must be in readiness in about six months. The company can be in readiness with this amount of power within the time required, and with the completion of the extension above referred to can continue to furnish this amount of power regularly.

The company has contracts with the Gulf States Steel Co., Tennessee Coal & Iron Co., many coal mines, the Southern Manganese Co., and various graphite products companies, all of which are directly connected with the proper conduct of the war, whose continued operations will not be affected under the plan proposed herein.

The Alabama Power Co. has available considerable apparatus which ordinarily takes a long period to obtain and which might be used in connection with the proposed work. It also has an excellent construction and operating organization with a long experience with local conditions.

Holding ourselves at your orders for further treatment of the subject, we are,

Very respectfully, yours,

ALABAMA POWER CO.,
JAMES MITCHELL, *President*.

The CHAIRMAN. Do you remember that letter?

Colonel JOYES. That is the letter to which I had reference and shows I was essentially right in saying it was addressed to my division.

The CHAIRMAN. Yes.

Colonel JOYES. It came to me at any rate.

The CHAIRMAN. It is dated November 6 instead of November 5.

Colonel JOYES. Well, I had it November 5 or 6 or 7. There were a good many at that time and I get them mixed.

The CHAIRMAN. After you received that letter, what did you proceed to do?

Colonel JOYES. As I said, I do not remember whether we made a written reply to that letter at the time or not, and I can not remember whether I saw

any of the Alabama Power Co. officials prior to about the end of November or not, but we will have the records looked up to see if there was any reply. There was nothing, at any rate, of any consequence, nothing significant or definite.

I went to Muscle Shoals along about the middle of November and stayed down there—it made about a 10-day trip and I got back in the latter days of November and immediately took up the going over and examination of the tentative draft of contract with the Cyanamid Co. for the nitrate plant, and other things depending upon that, to get that job started and clear the way for that; and then I got in touch with the Alabama Power Co. people, and they had their representatives come to Washington.

The CHAIRMAN. When did you complete the work with the Cyanamid people?

Colonel JOYES. We signed the contract, actually, on the 4th of December, 1917, if I am not mistaken. I think that is correct. I am pretty sure of it.

The CHAIRMAN. I think their testimony is that they had a contract which the Government entered into with them about the 1st of December, 1917.

Colonel JOYES. Well, I think that is wrong, sir. My remembrance is fairly clear on that, that it was signed actually on the 4th of December. Several things seem to fix that pretty definitely in my mind, and it was dated back to the 16th or 17th of November, in order to have it start from the very inception of the work.

As soon as we got clear, along about the 1st of December, perhaps a day or two before or a day or two afterwards, the Alabama Power Co. officials came to my office in Washington by invitation. Mr. James Mitchell, the president, and I think Mr. Martin, then vice president and counsel, and possibly others. Mr. Walmsley, for example, I think he was general manager or something like that at the time. I have those people particularly in mind and also Mr. Thurlow, chief engineer, and the reason I can not be sure who was there at the very first conference is because they were in there at different times in other conferences of about that period, sometimes two, sometimes another two, and sometimes all four of them. We discussed the different ways in which we could arrange to put the Alabama Power Co. in a position to give us the power we had to have.

The first proposition, as stated in their letter, was the Government financing, naturally, in the most obvious manner by loan or advance of money, and we could not see any earthly way in which we could do that.

The CHAIRMAN. Why not?

Colonel JOYES. Although the principle was recognized as being sound and proper, we saw no way whatever in which we could make a loan to the company at that time, or an advance.

The CHAIRMAN. Why not?

Colonel JOYES. Because we could not find any legal authority for it at all. We looked over the situation pretty hard and, of course, in peace times we would not have looked very hard, because we know we would not think of it; but in war times we looked to see if there was any way that we could possibly do it, and there was not the slightest chance. The War Finance Corporation and War Credits Board had been established about that time, and we did not know just how they were going to function. We thought, possibly, from their names, they might help out in a situation like that, and I sent an officer from my office to accompany some of the Alabama Power Co. officials to the office of the War Finance Corporation and War Credits Board to see if anything could be arranged there by the company or by us, but nothing came of it at all.

There was another thing that was thought of, and that was to make a firm contract for a certain definite amount of power, and make an advance payment upon it, but we had had numerous decisions that had been made in peace times, of course, and there was nothing to upset them, to the effect you could not make an advance payment on a contract for delivery of commodities, and it was even more specific that you could not do it for power from any of the regular appropriations. So we did not know what to do there. Later on, there were ways found, decisions and opinions given, that enabled such transactions to be carried out, but that was way along in 1918 that that was done. There were a number of opinions given by the legal officers of the War Department and the Ordnance Department which kept us away from doing either of the two things, either loaning or making an advance payment, either one.

The CHAIRMAN. What do you mean by "legal officers?"

Colonel JOYES (continuing). It was very embarrassing and later on we did it sometimes in defiance of the opinions because we had to.

The CHAIRMAN. What do you mean by the "legal officers of the department"—do you mean the Judge Advocate General?

Colonel JOYES. Yes, the Judge Advocate General had rendered some opinions. Also, with the development of the great business of the Ordnance Department, it was found absolutely indispensable to establish a corps of lawyers in the Ordnance Department to give prompt and ready advice as to the daily transactions coming up in the active divisions of the office, and some very eminent lawyers were attached to the department in that capacity.

The CHAIRMAN. Do you remember who they were?

Colonel JOYES. Oh, there were a great many of them, sir. I remember Mr. Ralph Crews for one. His name stands out, a very prominent man.

The CHAIRMAN. Where did he come from? Where is his office?

Colonel JOYES. I could not say, sir.

The CHAIRMAN. Do you know where he was from at that time?

Colonel JOYES. No, sir; I do not. Possibly, Major Burns might know.

Major BURNS. He is from New York City.

The CHAIRMAN. New York City?

Major BURNS. Yes, sir.

The CHAIRMAN. Do you know where his office is at the present time, Major?

Major BURNS. I can get that for you, sir. I do not recall it right now.

The CHAIRMAN. Can you let me know just exactly where his office is?

Major BURNS. Yes, sir.

Colonel JOYES. Any of those officers can be easily found, if you have any communications to address to them, or if you want to build up the record by having their present location or previous location. I think we can undertake to furnish that.

The CHAIRMAN. All I want is the truth about the matter; that is all.

Colonel JOYES. Yes, sir. Then, another name that comes to me is that of Col. William Williams, who was one of the negotiators and signed some of our contracts because he was in the procurement division in 1918.

The CHAIRMAN. He has gone to Japan.

Colonel JOYES. Yes, sir; temporarily, I believe. There was also—well, I had in my division a couple of men, one, Captain Noble, who is now dead—he was a New York lawyer, a rather young man but a very good lawyer, and I had a still younger man later on named Nightingale.

The CHAIRMAN. Was he from New York also?

Colonel JOYES. I think so.

Major BURNS. I think he is from California.

Colonel JOYES. I do not know. He went to California after a while, but I think he came from the East.

The CHAIRMAN. What part of California?

Colonel JOYES. I have not the slightest idea.

The CHAIRMAN. Los Angeles, probably.

Colonel JOYES. I do not know. Then there was an officer named Alexander Perry Osborn, a New York lawyer, who belongs to a firm of lawyers there. He was a rather young man. Those are all the names that come to me at the moment, but there were a number of others. Mr. Crews, or Colonel Crews, I think, was depended upon for the more important and authoritative advice.

The CHAIRMAN. How old were these lawyers?

Colonel JOYES. As I said, several of them I have mentioned were young. Colonel Williams was a much older man. I imagine in 1918 he was between 55 and 60, certainly.

PARTIAL LIST OF LAWYERS IN ORDNANCE DEPARTMENT 1917-18.

Crews, Ralph, lieutenant colonel: Age, 42; legal residence, Riverside, Ill.; member of law firm of Adams, Crews, Bobbs & Westford; income therefrom approximately \$20,000 per annum; now member of law firm of Shearman & Sterling, 35 Wall Street, New York City; commissioned June 28, 1918.

McKeehan, Charles L., lieutenant colonel: Age, 42; legal residence, Philadelphia, Pa.; B. A. and LL. B., University of Pennsylvania; law lecturer, University of Pennsylvania; present address, 815 South Twenty-first Street, Philadelphia, Pa.; commissioned December 26, 1917.

Griggs, Maitland F., lieutenant colonel: Age, 46; legal residence, Irvington, N. Y.; B. A. and LL. B., Yale; practicing attorney, New York City; present address, 527 Fifth Avenue, New York City; commissioned September 20, 1917.

Osborn, Alexander Perry, lieutenant colonel: Age, 33; legal residence, Gar-
rison, N. Y.; A. B., Princeton, 1905, and LL. B. Harvard, 1909; assigned to
active duty June 28, 1917, Washington, D. C.; to France February 20, 1918;
returned December 12, 1918; demobilized December 31, 1918; resumed practice
of law with Beckman, Menken & Griscom, 52 Williams Street, New York.

Noble, Raymond Hull, captain: Age, 31; legal residence, Brooklyn, N. Y.;
LL. B. and LL. M., New York University, 1907 and 1909; practicing attorney:
commissioned January 7, 1918. (Now deceased.)

Nightingale, Lionel G., major: Age, 37; legal residence, Poughkeepsie, N. Y.;
mechanical engineer and bachelor of arts, Cornell, 1909 and 1915; graduate de-
gree, juris doctor; present address, 535 West One hundred and forty-second
Street, New York City; commissioned June 19, 1918.

Delafield, John Ross, colonel: Age, 44; legal residence, New York City; A. M.,
LL. B., Princeton, 1896; practicing attorney, New York City; present address, 27
Cedar Street, New York City.

Galleher, Parke A., major: Age, 30; legal residence, Washington, D. C.; LL. B.,
George Washington University; practicing attorney, Washington, D. C.; present
address, National Metropolitan Bank Building, Washington, D. C.; commissioned
September 17, 1917.

Low, Benjamin R. C., major: Age, 38; legal residence, Brooklyn, N. Y.; LL. B.,
Harvard, 1905; member of firm Low, Miller & Low, attorneys, 30 Broad Street,
New York City; present address, 58 Remsen Street, Brooklyn, N. Y.; com-
missioned July 23, 1917.

Pinanski, Abraham E., captain: Age, 30; legal residence, Boston, Mass.;
LL. B., Harvard, 1910; assistant to general attorney, Boston Elevated Railway
Co.; member of law firm Pinanski & Morris 101 Milk Street, Boston, Mass.;
present address, 949 Blue Hill Avenue, Dorchester, Mass.; commissioned Aug-
ust 23, 1917.

Williams, William, lieutenant colonel: Age, 55; legal residence, New York
City; LL. B., Harvard, M. A., Yale and Columbia; practicing attorney; present
address, 1 West Fifty-fourth Street, New York City; commissioned February
12, 1918.

Hawkins, Richard H., lieutenant colonel: Age, 39; legal residence, Pitts-
burgh, Pa.; Ph. B., Yale, LL. B., University of Pittsburgh; law lecturer, Uni-
versity of Pittsburgh; practicing attorney, Pittsburgh; present address, 1405
Squirrel Hill Avenue, Pittsburgh, Pa.; commissioned February 8, 1918.

Fairchild, Arthur W., major: Age, 41; legal residence, Milwaukee, Wis.;
B. L. and LL. B., University of Wisconsin; practicing attorney; present address,
474 Kenilworth Place, Milwaukee, Wis.; commissioned October 15, 1917.

Holcombe, Amasa M., major: Age, 35; legal residence, Washington, D. C.;
M. E., Massachusetts Tech., 1904; practicing attorney (patents); present ad-
dress, 3305 Eighteenth Street, Washington, D. C.; commissioned May 26, 1917.

Hamilton, E. A., major: Age, 28; legal residence, New York City; LL. B.,
Cornell, 1913; practicing attorney, New York City; present address, 128 West
Eleventh Street, New York City; commissioned June 12, 1917.

Dodge, Parker, major: Age, 34; legal residence, Washington, D. C.; S. B. in
M. E. Massachusetts Tech. (LL. B.), 1907; practicing attorney (patent), Wash-
ington, D. C.; present address, 724 Ninth Street NW., Washington, D. C.; com-
missioned August 15, 1917.

The CHAIRMAN. Were these other young men of draft age?

Colonel JOYES. Possibly a few, sir. Colonel Crews was a man, I should say,
of about 40 or 45.

When we got these negotiations opened up in December with the Alabama
Power Co. we found it difficult to get at a working arrangement, and we
saw that there was going to be a considerable delay in getting an agreement.
The company had mortgages, bonded indebtedness, and it had a lot of firm
contracts for power, taking up a good deal of its production, and it had con-
tracts for secondary power also, and those were rather annoying in the way
they interfered with anything like a commandeering order to take away the
power; not that it could not be taken, but what troubled us was that if we
took the power by commandeering we were going to be interfering with so
many of the industries that the War Industries Board was telling us must be
interfered with in no way, shape, or manner. So it was very difficult, and
then there was the question of what damages, etc., the company could recover,
and the question of how the United States could be protected in whatever it
might do. The probable cost and complication due to commandeering appeared
prohibitive.

The principle had been established already of building extensions to plants where the Government required a delivery from the plants of more than their previous capacity could give, and there were a number of precedents for that—extensions and additions to machine shops, foundries, powder factories, and everything like that. It was the only way we could have gotten along at all and gotten anything. So that appeared to be the most obvious solution of it—to build an addition to the plant, so that it could deliver more than it was capable of before and give us what we required; but how to get that in and have the Government's interest protected and the Alabama Power Co.'s interest protected, as they necessarily demanded, made a very complicated proposition, and I could not see my way through it. I did not have a very big staff at that time of people I wanted to turn it over to, and I said, "We have got to do the thing anyhow and we will find a way to do it after we have got it started."

So I drew them a purchase order, simply saying "Deliver us so much power by such and such a time, or thereabouts," and to enable them to do this I issued them another order, "Put in an extension to your plant for which the United States will make some arrangement to finance," or words to that effect, and another purchase order, "Build a transmission line from your system up to the Muscle Shoals nitrate plant; start at it right away and we will settle the terms later on." Those orders were safe, as they were capable of later treatment as commandeering orders. They promptly said they would work under such an agreement as that, and they started in.

The CHAIRMAN. That was an agreement dated December 7, 1917, and is in the hearings.

Colonel JOYES. Yes; that is right.

The CHAIRMAN. It is addressed to you and says:

WASHINGTON, D. C., December 7, 1917.

Col. J. W. JOYES,

Colonel, Ordnance Department, United States Army,

Washington, D. C.

SIR: This company acknowledges receipt of your purchase order (Executive order No. 154) of date December 7, 1917, for the construction of a transmission line from our steam plant on the Black Warrior River to the site of the proposed ammonium nitrate plant at Sheffield, Ala.

In accordance with your instructions we are proceeding to book this order as a definite order on behalf of the Ordnance Department, United States Army, and will proceed as speedily as possible toward carrying out your instructions.

Yours, very truly,

ALABAMA POWER Co.,
By THOS. W. MARTIN,
Vice President and General Counsel.

Do you remember that order?

Colonel JOYES. Yes, sir.

The CHAIRMAN. Is that the one you have reference to?

Colonel JOYES. That is an acknowledgment of the order I had reference to.

The CHAIRMAN. Yes.

Colonel JOYES. As I say, I wrote three orders—one for the supply of the power, another for the addition to the plant, and another for the building of the transmission line. They were Nos. 154, 155, and 156. I think they were all dated December 7. They were in part superseded by later orders, somewhat modifying the requirements, December 21 and January 8.

The CHAIRMAN. There are three orders here, I believe, dated December 7. Here is one, order 156; also orders 154 and 155. They are all in the record.

EXECUTIVE ORDER NO. 154.

DECEMBER 7, 1917.

ALABAMA POWER Co.,

Birmingham, Ala.:

By authority of the Chief of Ordnance, you are hereby given an order to construct, on lands owned by you or rights of way under your control, from your steam-power plant on the Black Warrior River to the site of the proposed ammonium-nitrate plant of the Air Nitrates Corporation at Sheffield, Ala., for the present known as the United States Nitrate Plant No. 2, a transmission line,

for the purpose of and of proper capacity for transmitting electric current of 3-phase, 60-cycle, and about 110,000 volts. This line to be built as economically as possible, being for the temporary use of the United States in transmission of power during the period of the present war, or thereabouts. The line to be the property of the United States, and suitable arrangements to be made, as already tentatively agreed upon, to cover the payment of actual cost, plus a percentage thereof, to cover use of the Alabama Power Co.'s lands, right of way, construction forces, and other facilities, etc., and profit. All these conditions to be embodied in a future contract.

Priority, class A-1, has been requested from the War Industries Board for the manufacture of this material (copy of which is inclosed), so that delivery may be made at the earliest possible date.

Although this writing is in letter form, please book it as a definite order on behalf of the Ordnance Department, United States Army, by the undersigned, and promptly acknowledge receipt thereof.

Very truly yours,

J. W. JOYES,
Colonel, Ordnance Department, United States Army.

WASHINGTON, D. C., December 7, 1917.

Col. J. W. JOYES,
Ordnance Department, United States Army.

SIR: This company acknowledges the receipt of your purchase order (Executive Order No. 154) of date December 7, 1917, for the construction of a transmission line from our steam-power plant on the Black Warrior River to the site of the proposed ammonium-nitrate plant at Sheffield, Ala.

In accordance with your instructions, we are proceeding to book this order as a definite order on behalf of the Ordnance Department, United States Army, and will proceed as speedily as possible toward carrying out your instructions.

Yours very truly,

ALABAMA POWER Co.,
By THOS. W. MARTIN,
Vice President and General Counsel.

DECEMBER 21, 1917.

ALABAMA POWER Co.,
Birmingham, Ala.:

By authority of the Chief of Ordnance, you are hereby directed to make the following modifications of our order, XOT-154, of December 7, 1917:

In addition to the transmission line proper, ordered in XOT-154, as originally drawn, that order will cover also suitable transformer station for step-up to 110,000 volts at the Warrior plant end, and suitable transformer station for step-down from line voltage to 12,000 volts, or thereabouts, as to be more particularly specified by Inspector, and both these stations to be complete outdoor stations with proper oil switches, etc., details to be approved by Inspector.

All facilities contemplated will be of ample capacity to carry 35,000 kilowatts continuously without injury and without excessive energy loss and voltage drop. At present single circuit of 250,000 circular mils hard drawn stranded copper, regarded as most suitable, this to be definitely decided between you and the undersigned.

It is to be understood that every effort is to be made to have this entire line with the two substations in readiness for use by June 1, 1918, and that whatever temporary arrangements are necessary for taking the current which you will then have to take from your own lines, instead of from your additional generating capacity which we expect to install, must be provided in some manner satisfactory to this office.

In addition to the payments mentioned in the original order for actual cost, the percentage will be 6 per cent.

Nothing else on order to be changed.

J. W. JOYES,
Colonel, Ordnance Department, United States Army.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, January 8, 1918.

ALABAMA POWER Co.,
Birmingham, Ala.:

By direction of the Chief of Ordnance, purchase order XOT-155 and letter (T-8277) of December 14, 1917, are hereby canceled, and you are hereby given an order to purchase and install for the United States as a temporary addition to the steam power producing facilities at your Warrior River plant in Alabama, and to enable you to supply to the United States at Sheffield, Ala., the supply of power contemplated by a separate purchase order, XOT-156, Model No. 1, of even date herewith, as follows:

1. Thirty thousand kilowatt turbo-generator unit, with suitable accessories, as condensers, switchboards, battery of boilers, etc., directly necessary to its service, in addition to what you now have installed, or should properly put in for the portion of your plant now existing.

Also to install the foregoing upon your existing land and foundations, etc., and to erect thereover a temporary building for the protection of such apparatus.

Provided, that all of the foregoing work is to be performed by you, subject to the approval of the undersigned and on the basis of reimbursement of actual cost plus a construction fee, in consideration of which you will allow without special rental or similar charge therefor the use of your land, foundations, and other property as needed, the actual amount or percentage of such construction fee to be embodied in a future contract; said contract to be mutually agreed to by your company and this office, or in the event of disagreement, to be referred to a competent and authorized board for settlement.

2. Purchase order on: Alabama Power Co.

Although this writing is in letter form, please book it as a definite order on behalf of the Ordnance Department, United States Army, by the undersigned, and sign below the acknowledgment and acceptance on the part of your company.

J. W. JOYES,

Colonel, Ordnance Department, United States Army.

JANUARY 8, 1918.

We accept the above order.

ALABAMA POWER Co.,
By JAMES MITCHELL,
President.
THOS. W. MARTIN,
Vice President and General Counsel.

JANUARY 8, 1918.

ALABAMA POWER Co.,
Birmingham, Ala.:

By direction of the Chief of Ordnance, purchase order XOT-156 is hereby canceled and you are given this order to furnish certain electric power, to be specified hereafter, to the United States at Sheffield, Ala., viz:

Upon completion of the transmission line from your Warrior plant to Sheffield, which line you are to construct under my order XOT-154, you will furnish from any resources of your system such part of 10,000 kilowatts as the United States may require; and in excess of that quantity, if available, as the United States may require.

Also, upon completion of the additions to your Warrior steam plant to be built by you for the United States, as covered by my order XOT-156, Mod. 2, which completion is expected to be about August 1, 1918, you will furnish from said addition such part of 30,000 kilowatts as the United States may require, and in excess of that quantity if available from your system as the United States may require.

The rates for power and other terms hereunder to be embodied in a future contract, said contract to be mutually agreed to by your company and this office, or in the event of disagreement to be referred to a competent and authorized board for settlement.

Although this writing is in letter form, please book it as a definite order on behalf of the Ordnance Department, United States Army, by the undersigned, and sign below the acknowledgment and acceptance on the part of your company.

J. W. JOYES,
Colonel, Ordnance Department, United States Army.

JANUARY 8, 1918.

We accept the above order.

ALABAMA POWER CO.,
By JAMES MITCHELL,
President.

THOS. W. MARTIN,
Vice President and General Counsel.

The CHAIRMAN. The foregoing are the orders and acceptances under which the work proceeded with the exception that on February 28, 1918, these orders were given the status of an agency contract to facilitate the fiscal arrangements.

Colonel JOYES. So we got it started. They wired right down to their people and got them started on the acquisition of the necessary right of way for the transmission line and began to work on the addition to the power plant, etc.

The CHAIRMAN. These letters were all issued here in Washington?

Colonel JOYES. Yes, sir.

The CHAIRMAN. And this transaction occurred at the Capital, here in Washington?

Colonel JOYES. In the city of Washington; yes, sir. In my office, which at that time was up on G Street, and these letters were put in my regular file of purchase orders, and I am quite positive that they were written and actually signed on the day indicated by the date upon them. I remember that pretty clearly.

The CHAIRMAN. December 7. I think.

Colonel JOYES. December 7, 1917. There were later some modifications as to the capacity of the apparatus to be put in, etc.; copies have been submitted (above) to make the record correct. The reason for writing the purchase order there was so that whatever payments we might have to make or anything would be based upon a writing. A good many of the war orders were placed by telephone or telegraph with no word of writing at all, but we tried to have something in writing, at any rate, and with a purchase order, especially when it is accepted, we had something to indicate a basis of partial agreement, and that put it in shape where we would get the work done, and if we came to a satisfactory agreement, all right, and if we did not, we could go up to somebody that had the ultimate power and tell them to decide what they would do for payment arrangements; presumably, the War Industries Board or some special board, would ultimately have passed upon it.

We then took occasion to try to work out a proper agreement. I had a great many things to do, but I carried on, nevertheless, a good many negotiations in Washington in the early period; that is, December, January, February, and along in there until I found I could not do it any longer. We were not getting to a final agreement, and I turned it over to other people in my office to take it up with the Alabama Power Co. people. We had a great difficulty there as to speed of negotiation because the Alabama Power Co. have offices in New York and their main business in Alabama. Some of their officials were at one place and some in the other, habitually, and we were in Washington, and all of us were busy.

The CHAIRMAN. The war was on at this time?

Colonel JOYES. Yes, sir; so that both in my organization and in theirs, it came to a point where a good deal of the threshing out of the details and framing up of the copy, which was hoped might be the final shape, was left to subordinates, and we let it go along for a while in that way and a draft would come up and sometimes I could not pass it and sometimes Mr. Mitchell could not pass it, and so it went on. After a while, pretty well along—

The CHAIRMAN. Why could not you pass it?

Colonel JOYES. Oh, well—

The CHAIRMAN. Or why could not Mr. Mitchell pass it?

Colonel JOYES. Some of the propositions did not look good to me. They looked not favorable, not safe, or otherwise unsatisfactory.

The CHAIRMAN. To the Government?

Colonel JOYES. Yes, sir; I was working for the Government, of course.

In the summer of 1918, I got very impatient about the progress of the contract and I think the power company did, too. We wanted to see something settled, both of us, and so we brought the negotiations right up to Washington where we could get at them a little closer, and we finally arrived at a contract form that we thought was going to go through all right and going to be satisfactory. At that time there had been a reorganization of the Ordnance Office, whereby I had no longer any authority to sign a contract, and all contracts were required to go to the procurement division for signature, and to go through a regular, uniform process of approvals. So I took this contract over to the procurement division, to general MacRoberts, who was at the head of it, along in the summer of 1918, and told him the situation, and he said, in effect, "I will refer you to Colonel Williams, who will be appointed to take care of this situation and carry it to a conclusion." Colonel Williams looked the contract over and he said, "This is not exactly in the form we write our contracts. I can see that right away, and we will want to examine it very critically, anyhow, and if I chop it all to pieces and start fresh I will get it in our regular form and I can more carefully examine it and see that it fulfills all requirements." So he started to chop it to pieces and start all over again, but he preserved the essence of the contract and worked pretty expeditiously. We all sat with him. I was present at all the important conferences and took a leading part. Nothing was done that I did not concur in, and the contract was brought to completion and finally signed on about November 7, 1918.

The CHAIRMAN. Do you remember whether that contract had article 22 in it? I think that is the number of the article.

Colonel JOYES. I do not remember the articles by number. I know it had at least 22 in it, sir.

The CHAIRMAN. "Article 22: Sale to or purchase by contractor."

Colonel JOYES. I remember that, sir.

The CHAIRMAN. Will you state to the committee as clearly as you can what that section is.

Colonel JOYES. You mean an analysis of the provisions of the contract?

The CHAIRMAN. Yes.

Colonel JOYES. I have an analysis of that here and I intend to change nothing whatever from the language of the contract but to put it in shape where the different alternatives are more clearly brought forth. I can hand that right over to you and there are several other copies here, if the members would like to see them.

(The analysis referred to is as follows:)

Contract T-69—Alabama Power Co. and the United States.

ANALYSIS OF SEVERAL ALTERNATIVE PROVISIONS FOR DISPOSAL.

Time or conditions.	Provisions for disposition.	Consideration, etc.
1. After 3 years after war end.....	United States has option to demand that contractor purchase Warrior extension and Warrior substitution.	At arbitration value. (Excess or deficiency of acc. fund to be paid by United States or contractor, respectively.)
2. If and when acc. fund equals or is greater than actual total cost.	Contractor may demand that United States convey title in Warrior extension and Warrior substitution.	At total actual cost. (Excess acc. fund to be paid back to contractor.)
3. At any time.....	Contractor may demand that United States convey title. (Warrior extension and Warrior substitution.)	At total actual cost. (Contractor paying any excess necessary and acc. fund retained by United States.)
4. After Dec. 1, 1926, or before if United States finally cease to take energy. (Acc. fund less than actual cost.)	Contractor may demand..... (a) If arbitration value equals or is less than acc. fund, United States to convey title to Warrior extension and Warrior substitution, retaining all acc. fund. (b) If arbitration value is greater than acc. fund, United States to convey title to Warrior extension and Warrior substitution upon payment by contractor of excess of value over acc. fund. (60-day term prescribed for either a or b transfer.)	Value fixed by arbitrator, and— At arbitration value, or any greater amount in acc. fund. At arbitration value.

Contract T-69—Alabama Power Co. and the United States—Continued.

ANALYSIS OF SEVERAL ALTERNATIVE PROVISIONS FOR DISPOSAL—Continued.

Time or conditions.	Provisions for disposition.	Consideration, etc.
5. If contractor fails to purchase on United States demand.	United States may sell to another not for operation, but must remove within 6 months.	This being not a sale to contractor, price is problematical. (United States to return to contractor only such part of acc. fund as may remain over and above any excess of sale price over original actual cost to United States. (Not likely.)
6. If (a) not sold in 10 years from 1917, or (b) if not sold and no energy taken by United States for 365 days.	United States shall, upon demand, remove Warrior extension and Warrior substation within 6 months unless United States shall exercise its option No. 1 to demand purchase by contractor. If remove, United States returns all acc. fund.	(No sale, therefore no price prescribed, unless United States exercises option No. 1 for arbitration value.)
7. If United States take no energy for 2 years; or 1927, in any event.	United States, upon contractor's demand, to remove transmission line: <i>Provided</i> , United States may, instead, demand contractor purchase at arbitration value.	Arbitration value if sold. (This for transmission line.)

Colonel JOYES. I think that helps to give a clear idea of just what that article means. If there is any changed meaning in that from any of the provisions in the contract, it is inadvertent. I do not think there is. Before I start to discuss that analysis I would like to say what was the object of the whole thing.

The CHAIRMAN. Yes.

Colonel JOYES. The object was this, that the United States had to provide additional facilities to enable the power company to give it the power it wanted—to sell it, of course—and having provided those facilities, it wanted to get some return upon its expenditures if possible, and it wanted the best return upon its expenditures that it could get. We considered very carefully how we could do that. We possibly could have taken some land somewhere down there, whether at that particular place or not, seized the land or bought it, and gone ahead to build, but we did not have authority to buy any land at that time. The fact of the matter is there were specific legal provisions against it.

The CHAIRMAN. What were those legal provisions against it?

Colonel JOYES. Revised Statutes, 3736.

The CHAIRMAN. Have you any specific bill in mind that contained such a provision?

Colonel JOYES. This was not a bill; it was an act, a definite section of the Revised Statutes dating back, I think, to 1820 or something like that, providing that no land could be purchased without specific legislation providing for it, and there was another section of the Revised Statutes, 355, that was troublesome. That was a restriction that you had to get full written approval of title by the Judge Advocate General and also get cession of jurisdiction by the State legislature before you could go in and build on land.

Now, that bar, probably, you may think was removed by legislation in the summer of 1917, but it was not. There was a bill passed July 2, 1917, which is in the Statutes at Large, volume 40, page 241. That was an act to authorize condemnation proceedings of lands for military purposes, and it gave all necessary powers for acquirement, permanently or temporarily, of land by condemnation or by purchase, but only for certain purposes, and the purposes were the prosecution of works for fortifications, coast defenses, and military training camps. Those were the only three categories of purposes mentioned. We were not acting under any one of the three. We had no benefits from that legislation whatever. I say "we"; I mean either the work under my charge or any of the work of the Ordnance Department throughout. I called that situation to the attention of the Chief of Ordnance some time in August, 1917, and recommended, for the sake of the general business of the Ordnance Department, that he have it changed by further legislation, and he told me it was already in hand. Ultimately it was done. The act of October 6, 1917, did not help materi-

ally; but the act of April 11, 1918, was put on the record and that revises this previous legislation by putting in after those strictly military purposes—that is, fortifications, coast defenses, military training camps—the words “and for the construction and operation of plants for the production of nitrate and other compounds, and the manufacture of explosives and other munitions of war and for the development and transmission of power for the operations of such plants.” That was the only change of any consequence in the act of July. That was the act of April—

The CHAIRMAN. April 11?

Colonel JOYES. April 11, 1918. I have a full copy of that, sir, if you wish to see it. I am sure it is right.

The CHAIRMAN. If there is no objection on the part of the committee, we will put that in the record. I do not think it has been put in the record heretofore. It is very short and I will have the clerk read it for the benefit of the record.

(The clerk read as follows:)

“Condemnation of land for military uses: That hereafter the Secretary of War may cause proceedings to be instituted in the name of the United States, in any court having jurisdiction of such proceedings for the acquirement by condemnation of any land, temporary use thereof or other interest therein, or right pertaining thereto, needed for the site, location, construction, or prosecution of works for fortifications, coast defenses, military training camps, and for the construction and operation of plants for the production of nitrate and other compounds and the manufacture of explosives and other munitions of war and for the development and transmission of power for the operations of such plants; such proceedings to be prosecuted in accordance with the laws relating to suits for the condemnation of property of the States wherein the proceedings may be instituted; *Provided*, That when the owner of such land, interest, or rights pertaining thereto shall fix a price for the same, which in the opinion of the Secretary of War shall be reasonable, he may purchase or enter into a contract for the use of the same at such price without further delay. * * * Act of July 2, 1917 (40 Stat. 241) as amended by act of April 11, 1918 (40 Stat. 518).”

“Chapter XXIV, act of July 9, 1918 (40 Stat. 895), provides that during the World War”——

Colonel JOYES. I think that is hardly pertinent to the present point. I have no objection to your reading it, but it is a note I made on the paper for another purpose.

Mr. GARRETT. What was the date of that act?

The CHAIRMAN. April 11, 1918.

Colonel JOYES. There is one thing I think it is necessary to say here in order to clarify that particular situation.

The act of April 11, 1918, has been referred to before and it reads in such a way; in fact, it says, I think, that it is the act of July, 1917, as now amended, but the idea that is apt to be created by that is that the amendment is something inconsequential and that the act of 1917 was essentially that of 1918, which is utterly wrong. As I have told you, the act of 1917 gave the Ordnance Department absolutely no assistance whatever, because it mentioned nothing, no purpose, with which the Ordnance Department was concerned in any way, shape or manner, and the putting in of all those purposes was done by the act of April, 1918. The bill that the Ordnance Department had recommended and which started its course was a mere, brief amendment, making no mention specifically of the nitrate plants, but simply intended to broaden it out so as to include munition plants and so forth in general terms, so that any of the additional facilities that the Ordnance Department had to have could be provided under it. The specific mention of the nitrate plants and the power was put in in Congress, I believe.

That is the situation as to the law, and whatever the technical construction of it may be, that was what we had staring us in the face and was what remedy was given for it.

We had also difficulty about anything we wanted to sell, and we could not figure on getting a return of the expenditure, especially if it be on real estate, by providing for any sale, because there was no law for it; in fact, I think, there was—well, there was no law for it. I do not think I could cite you anything definitely forbidding it but it was understood that it could not be done, and those provisions that allowed for a sale came in later on.

So we cast about and we thought the best thing we could do was to arrange that we should take the temporary use of the land and such facilities as we needed of the Alabama Power Co. There was no bar to a lease or to a rental, while there was to a purchase. There could be no difficulty about giving up a leasehold while there might be about something that you held in fee, so that was the basis we thought was most practicable. You may say, Why did we go in there and get mixed up, interlocked and intertwined with a going concern so it could not be gotten away? And that has been said, and the reason was this: They had what we wanted there, and at that time when we were in the war, when we found what was needed, we went after it and took it in some way or other. Now, they had there the land. The land did not amount to anything, because land is land, and at lots of places you could find ground to build a power house on, but you can not build a power house on every corner lot and have it work and work decently. You have got to have water. You have got to have a place where the water runs right through. You have generally got to dig down 25 or 30 feet in the ground to get it to run through and to make a conduit for it. Now, the Alabama Power Co. had already installed a steam-power plant at Gorgas on the Warrior and they had just completed that, and they had left a blank end wall to it, a temporary end wall, with the express purpose of extending it so as to have more units. They had put in one unit. We saw their plans providing for it. They had led the water for the condensers in through underneath this one unit which they had installed, carried it right on down to an outlet in the river lower down, all concreted in, and some accessory foundation structures on the lower levels had been made for the additional extensions that they contemplated.

The CHAIRMAN. What extensions did they contemplate at that time?

Colonel JOYES. They contemplated two successive extensions. Now, this, of course, is not positive knowledge. I could not testify to this under oath or anything like that, but I am sure of it, as I have been told it many times, and I have seen the plans.

The CHAIRMAN. Where did you get the information?

Colonel JOYES. From officials of the Alabama Power Co., and I am quite sure I have seen the plans and I have seen the structures on the ground or in the ground where they had started to build. They had started the foundations, the substructure of the foundations. They had also, as I say, built the channel for the condensing water to much greater capacity than would be required for the one unit that they had installed. They had built it of sufficient capacity for three, which is sufficient proof.

Having those things, it meant a considerable gain of time for us, and time was a great thing with us because we wanted the power in six months. We wanted to be sure that when we got that nitrate plant we would have this steam station ready to back it up and not have power fail on us because the river was low. So that was quite an object. It meant not only taking a piece of land, so much area of land, but it meant taking a particular piece of land with already certain structures belonging to the power company already in the ground, and that is the situation that made it so particularly delicate and difficult for us, and reasons which I think will clear any mind that may still have the idea that there was a deliberate mixing and interlocking of things that was objectionable.

We started in there then to build this addition, tying it right into the other unit that the Alabama Power Co. already had, so that the two could work together. You could not have them two separate plants feeding power into the same system unless you had certain elements of control and coordination. To make power, alternating-current power, of high potential you have got to have it very carefully synchronized before you can put the output from two machines into the same line. It has to be either in one plant or you have to have a more expensive and troublesome installation coordinating it in two separate plants. So, naturally, we built it to go right into the one thing and make a unit that would be efficient and ready, and especially we felt it preferable to do that because that gave us a very proper and correct outlook to get some money back for the United States. In many cases where the Ordnance Department had at that time to put in additional facilities to get what the Government had to have, we thought, "This is all lost money; this is sunk. It is an expense account and not an investment, and we will never get any of it back"; but here we had an assurance of getting some of it back.

The CHAIRMAN. Did you know at this time of the act of June 3, 1916, the national defense act, which forbade any private company mixing in with the Government of the United States in any of the activities at Muscle Shoals?

Colonel JOYES. No, sir; I do not remember any such language as that. I mean to say, with all due respect, that those words you have used there were not in that legislation at all, and I remember the act very distinctly—section 124.

The CHAIRMAN. I will give you the exact words of section 124 of the national defense act.

Colonel JOYES. Yes, sir.

The CHAIRMAN. I will read you the exact language:

"The plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital."

Colonel JOYES. Yes, sir; but this was not a plant or plants having any connection whatever with that act.

The CHAIRMAN. You did not construe this as having any connection with the act of 1916?

Colonel JOYES. Well, it was not a matter of construing it, Mr. Kahn, it was a matter of knowing that it absolutely had no connection with it.

The CHAIRMAN. How did you arrive at that conclusion?

Colonel JOYES. Because we never spent a cent of the money under that provision of law, under that section 124, for that purpose, either for the Alabama Power Co. work or for the nitrate plant No. 2 which it was to serve.

The CHAIRMAN. Just explain that for the benefit of the record.

Colonel JOYES. Well, I will tell you about that. When I started to work in the nitrate division in June, 1917, the matter was in this shape: We had the report of a commission of scientific men, business men, etc., which had recommended certain steps to be taken under section 124, to carry out the responsibilities and duties of the President thereunder, and those recommendations had been approved by the Secretary of War and by the President. They were turned over to the Chief of Ordnance and by him to me to carry out.

They were, first, to make a plant—I am not attempting to quote anywhere near verbatim, but the essence of the essential points were these: First, to make a plant to produce about 60 tons of ammonia per day by the process being developed by the General Chemical Co., which was a process for the synthetic formation of ammonia by the direct union of nitrogen and hydrogen; and another step was to put in a small plant to study the oxidation of ammonia to make nitric acid, nitric acid being a principal material for explosive work; and again, another step was to build another experimental plant for the concentration of nitric acid from the strength in which it was usually obtained to that in which you need it for making power, etc., an essential and necessary process and one not used theretofore here in this country, because when acid is made by the sodium nitrate process, it comes out strong. When you make it by any of the fixation processes, it comes out weak, and it has to be concentrated before it is usable in most of the explosives processes.

Those were the three main steps. There were certain other investigations that were suggested and recommended, some for which small allotments of money were suggested—investigations of a sodium cyanamid process and one or two others and, of course, general, continuing investigation of fixation in general.

I started in, then, at the beginning in July to put in a plant to follow out that recommendation, which was all I had a mandate for, and we put in the United States nitrate plant No. 1, not at Muscle Shoals but a little to the southwest of the city of Sheffield, Ala., which is right in the vicinity of Muscle Shoals.

The vicinity of Muscle Shoals has no real significance to that plant at all, but it was simply that there was a plot that, all things taken into consideration, seemed to be the best place to put it to start with. That plan, unquestionably, comes in the purview of section 124 of the national defense act. There is no doubt about it.

The CHAIRMAN. The money used for its construction was all taken from the \$20,000,000 referred to in that act?

Colonel JOYES. Yes, sir. We started in with that thought, bought the land with that money, and started construction with that money, and we expected to complete it all out of that money. After a while we found the expense was getting heavier than we anticipated and running considerably beyond our estimate. We had added things to that plant for war purposes that were never contemplated in the nitrate program and that were not strictly chargeable to the \$20,000,000,

either. That may seem to be a detail which may simply bulk the record, but it explains why we went outside of the \$20,000,000 to get other money to help out in plant No. 1. That was the situation there.

In the fall of the year I was called into the office of the Chief of Ordnance and was told that the situation was getting quite acute as to the supply of explosives for war operations, and the material to make them out of; that they were going to go to ammonium nitrate, a mixture of ammonium nitrate and T. N. T. for shell filler, and they could not see where they were going to get enough of either. They were trying all sorts of things to get more toluol and more ammonium nitrate, and they asked me if there was any fixation process that would help out in order to get the ammonium nitrate that was required by the program. I said that there was. They said what process would you use—the same one that the committee recommended and that you are putting in at nitrate plant No. 1, that is, the synthetic ammonium process? I said, no, I would not. I said it is not a developed process; we have already gone to a pretty heavy expense in the plant, on a pretty large scale to try an experimental process, and while we think it will come through all right, it may not come through under the first trial, and we do not know when it will come through; I would not trust it for necessary, urgent use, not at all; and the only thing I know of that you can trust and that we have is the cyanamid process.

Mr. PARKER. You said that was in the fall. Was it 1917 or 1918?

Colonel JOYES. It was 1917; as a matter of fact, it was in October, 1917. They asked me if I had any communications from the company that controlled the process. I had one tentative, preliminary one we had gotten from the Cyanamid Co., simply to find out what they had, whether it was going to be a usable process, and an organization that we could depend upon in the event of just such a need as came up. We showed that, and we were told to get into communication with the Cyanamid Co. and put up to them the present requirements and see what kind of an offer they would make. We did that, and these numbers of offers that have come out in the several investigations and been put into the records, were brought forth.

I think the first of those serious offers, I mean the first offer addressed to the war needs of the Government, was dated October 29, 1917, or thereabout. The final one was dated November 13, 1917.

The CHAIRMAN. Did that come from the Air Nitrates Corporation?

Colonel JOYES. The Air Nitrates Corporation at that time did not exist. It came from the American Cyanamid Co. Those proposals stated that in order to do what the Government asked them to do they would form a subsidiary corporation, of which they would own, essentially, all the stock, to carry on such of those war activities as the Government wanted.

What I wanted to emphasize right there was the fact that the cyanamid process had been thoroughly investigated—I say thoroughly—apparently thoroughly, considerably investigated by the commission that had been established to look into the matter of nitrate supply before I ever got into the game at all, and they had deliberately kept away from it, and recommended a trial of this newly developed process, the synthetic ammonia process, instead. Therefore, as the program was turned over to me, the cyanamid process was put aside, and, to an extent, adversely reported upon, because it was considered that it was not the process which promised to be most economical in the production of the products we were interested in in the near future. They thought that this coming synthetic ammonia process promised to be much more economical. That was the situation.

So there was nothing in the way of a mandate, although there was an adverse mandate as to the bringing of that plant into being for the use of the cyanamid process under section 124 of the national defense act.

When we decided to build that plant, however, we had to think how we were going to do it; how we were going to get a site, and where we were going to get the money to do it, and so on. We had, as I told you, a specific bar on the statute books to buying any land. We looked through the appropriation acts and we found no money appropriated for the purchase of land, and we were in a predicament there. We could get the money, according to opinions which we had, from the general appropriation acts to build the plant, but we could not get the money to buy the land. So the only way I saw to do it was to take some of this money provided for in section 124 of the national defense act to cover the purchase of land alone, and I got an allotment made by the President of the sum of \$200,000 to pay for the purchase of the land for United States nitrate plant No. 2 at Muscle Shoals. That was

put on my books, and at one time I got an addition to it, because I found that the anticipated cost of the land went beyond what money I first got, and there was altogether allotted to me \$350,000 for the purpose of buying the land. But I never spent a cent of it. I realized the disadvantage of using that money to buy the land for the nitrate plant, because I knew the only way we could make the nitrate plant was to work with a private corporation, and the law forbade that. So we were not in a pleasant situation. But we saw no escape from it, and we had to have the stuff, and we went on with it.

But before it came to the payment for the first parcel of land there was legislation which did permit the purchase of land out of the general appropriations for purchasing munitions, namely, armament of fortifications. I am referring to that new legislation, the act I just read, of April 11, 1918, which removed the bars, and we had a decision thereunder shortly after the passage of the act that said that in view of that legislation moneys appropriated by the general appropriation acts for the purchase of munitions could be used to purchase the necessary land for producing the munitions. As soon as I saw this decision which came from the Judge Advocate General's office I went out and said we will get out of this embarrassment—of buying the land for this plant, where we have got to work with a private corporation, out of funds appropriated by a law that prohibits us working with a private corporation—by not spending any of the money in any way, shape, or manner in connection with this plant. So the money being on my ledgers intact and never touched I had it revoked.

I have a letter here which will show what I did, and I can put this letter in the record if you want it. This is dated January 20, 1919, after I had learned of the decisions under which the purchase of land was allowed to be made out of current appropriations for war munitions. This letter was addressed to Mr. Dorr, office of Assistant Secretary of War, Director of Munitions. It says:

"Pursuant to conversations on the desirability of paying for land for United States nitrate plant No. 2, Muscle Shoals, Ala., and the quarry therefor, from appropriations other than 'nitrate plant' (sec. 124, national defense act, approved June 3, 1916), I hand you the following memorandum of opinions in support of the use in the present emergency of general supply appropriations, such as 'armament of fortifications,' for land purchases necessary to the supply of munitions.

"In the first place, the real reason for United States nitrate plant No. 2 was the 'war emergency'—

I had those words underscored in the original letter—

"the need for the supply of ammonium nitrate and the need for saving ammonia and sodium nitrate imported from Chile," both of which needs this plant was to meet.

"All statements to congressional committees, etc., have, I am sure, been correct in thus stressing this war need of this plant.

"In making the allotments previously made for purchase of sites for the nitrate plants, the principle was followed of using funds out of the appropriation 'nitrate plant'—that is, section 124 of the National Defense Act—because there was no doubt whatever about the applicability of this appropriation to the purchase of land, and it was considered at that time that the appropriation "armament of fortifications" could not be used for the purchase of tracts of land not specifically mentioned.'

"However, in the summer of 1918 many purchases of land were made out of general supply appropriations as necessarily incident to the procurement of a sufficient supply of the munitions for which the acts of appropriation provided.

"On July 26, 1918 (T-58606). I submitted the specific question to the Ordnance Department for decision in regard to the sites of United States nitrate plants 3 and 4—at Toledo and Cincinnati; plants started but never completed—and the following indorsements were made thereupon:—"

[First indorsement.]

AUGUST 2, 1918.

Lieut. Col. Ralph Crews, Contract Section, Procurement Division.

To: Lieut. Col. W. M. Crane, Jr.

1. The question propounded in the within memorandum has been considered in the light of the annexed opinion rendered by the Judge Advocate General, as of July 10, 1918, and in consultation also, with office of the Judge Advocate General.

2. You are advised that the armament of fortification money may be used for the purchase of land for nitrate plants, to such extent as is fairly adjudged reasonable and necessary in the carrying out of the purpose set forth in the appropriation, viz:

"For purchase, manufacture, and test of ammunition for mountain, field, and siege cannon, or necessary experiments in connection therewith, and machinery necessary for its manufacture and necessary storage facilities"

3. If, in the exercise of fair judgment, it is decided that all of such land would not be necessary for the purpose set forth above because of the fact that some of the nitrate would in all probability be used for other purposes, correct practice would require an estimate of what portion of the purchase price is fairly to be attributed to the carrying out of that purpose, and the armament of fortification money should be drawn upon only to that extent.

The second indorsement upon that paper, transmitting it down to me as chief of the nitrate division on August 5, 1918, reads as follows:

ORDNANCE OFFICE,
ESTIMATES AND REQUIREMENTS DIVISION,
August 5, 1918.

To: Chief Nitrate Division.

1. The Chief of Ordnance directs attention to the second paragraph of the foregoing and instructs that the nitrate division shall proceed in the matter of purchase of land for the nitrate plants in accordance therewith.

JOHN R. SIMPSON,
Colonel, Ordnance, National Army.

"7. Decision of July 10 referred to by Colonel Crews in the first indorsement above was J. A. G. O., 601, July 10, 1918. Digest of this opinion is as follows:

"Public property: Secretary of War may acquire power plant from ordnance appropriations.

"Under the act of July 2, 1917 (40 Stat. 241), as amended by the act of April 11, 1918 (Public No. 127, 65th Cong.), the Secretary of War, if in his judgment the acquisition of a power plant is reasonably necessary for the expeditious procurement by manufacture of ordnance stores, may acquire such power plant from ordnance appropriations. The Secretary of War, upon such terms as may protect the Government, can legally arrange for the transmission over private or municipal lines of the power developed at such plant to the points where the same is desired to be used."

"8. Furthermore, the Ordnance Department informally asked the Judge Advocate's office (00-601-1014 Misc.) to be shown opinions on this question, receiving in reply four inclosures, three being correspondence containing opinions and one a copy of Public Act 127, Sixty-fifth Congress. Copies herewith, marked inclosures 1-5, inclusive.

"9. The Public Act 127, Sixty-fifth Congress, approved April 11, 1918, above referred to, appears to have removed not only specific restrictions of section 355, Revised Statutes, but by conferring authority upon the Secretary of War in time of war to institute condemnation proceedings in respect to any land needed for specific war purposes or upon agreement as to price to purchaser to write a contract for purchase and to take immediate possession of such lands did also remove any limitations of law preventing or forbidding the use of funds, under general appropriation acts for procuring supplies, for the purchase of lands, as well as other facilities necessary to the procurement of such supplies."

The line of reasoning here, of course, was that the only thing that had prevented our using the general appropriations in the past for purchase of land had been the Revised Statutes, and that bar was lifted, and, furthermore, the fact that the legislation of 1918 specifically authorized the Secretary of War to go and take immediate possession of lands involved, and that there must be some provision for paying for them. That was the reasoning upon which it was all based.

"10. This view is supported by the following, which appeared in the fourth indorsement, Judge Advocate General's office, April 23, 1918, on Judge Advocate General, 601 purchase:

"It is the opinion of this office, therefore, that the act of April 11, 1918, fairly construed, confers authority for the acquisition of either title in fee or a

temporary interest in lands needed for the test of guns and other munitions of war, for the manufacture of which appropriation had been made by Congress."

That specific decision was with a view to a purchase of land for a proving ground. That is why they refer it to the test of guns.

" 11. That opinion confirmed such use of supply appropriation funds for the purchase of land for the test of the supplies. If the appropriation be available for such an incident to the procurement of the supplies appropriated for it would seem certain that it could be used for such an essential as land for the manufacture of the supplies."

That was signed by me.

Coming out of that I was given a new allotment out of the armament of fortifications appropriation to pay for the land for the United States nitrate plant No. 2, and the original allotments made for that purpose out of the "nitrate plants," section 124 of the national defense act, were revoked in toto, every cent.

The CHAIRMAN. Did you return that money back into the Treasury?

Colonel JOYES. It was just a credit on my books, and when an allotment is revoked it means that the credit is taken back. It is the same thing as if I had written or received a check for \$350,000 and I drew my check for \$350,000 back. As a matter of fact, it was transferred to another account in my office; it was turned over to plant No. 1 to help finish up, I think.

The CHAIRMAN. The money for plant No. 1 was taken out of the money—

Colonel JOYES (interposing). Yes, sir; but I say that that \$350,000 from the national defense act which had been given me to buy land for plant No. 2 was, I think, simply transferred to plant No. 1, because we needed more money there. At any rate, it was credited to some other activity or else taken away from me. It was altogether separate from any connection whatever with plant No. 2, the cyanamid plant, and there was never a cent of it spent for that purpose at all. There has been so much said about that that I thought I had better go into it rather elaborately to clear it up.

The CHAIRMAN. We are very much obliged to you, because the whole thing seems to have been all mixed up.

Colonel JOYES. I have been digressing, Mr. Chairman. You wanted me to analyze the provisions for sale in the Alabama Power Co. contract.

The CHAIRMAN. Let me ask you this question: You considered that nitrate plant No. 1 was constructed under the act of June 3, 1916, the national defense act?

Colonel JOYES. Absolutely; yes, sir.

The CHAIRMAN. And you considered that nitrate plant No. 2 was not so constructed?

Colonel JOYES. I know it was not.

The CHAIRMAN. It was constructed out of money appropriated for armament of fortifications?

Colonel JOYES. The money appropriated to purchase munitions and armament of fortifications; yes, sir. I think every penny came from that appropriation. There may have been some other, but absolutely not a penny of it came from the national defense act, I am sure of that. We were afraid to go on with it, because of the talk about the prohibition against working with a corporation. We could not do it. We thought we might do it in the first place, but we were afraid all the time, and as soon as we found a way out we got out, and got out quick, and everything connected with it.

The CHAIRMAN. That is very instructive.

Colonel JOYES. Coming back now to the provisions for sale in the Alabama Power Co. contract. When we started out we had a proposition from the Alabama Power Co. which said if we would advance them about two and a quarter million dollars they would put in there necessary facilities as their own investment, and would then furnish us the power that we wanted, give us a firm demand for it, and something like 7 mills would be the price, they would ask for it on every kilowatt-hour which we bought from them, and they would give us back so much, immediately, or set it aside, to make an amortization fund to pay us back what money we had advanced. When we could not make the loan we thought we would make the construction ourselves, because we could see a color of a way to do it. We then cast about to see how we would be sure to get some of that money back. We figured we would try to have some kind of a repayment to us each time we made a payment to them for power, that we would get some back into the Government's pocket to go toward the

repayment of a good, substantial part of the money we had put in for that structure. We worked always along those lines, and when we looked at it we said, "How are we going to fix that up; what are we going to do with it? If we take the money back, it must go somewhere; how is that going to be treated? If we buy the power from the Alabama Power Co. and pay them, and then we say to them, 'Give us back so much, then we can put into the Treasury what comes back, and that will be a partial payment for the purchase of that plant by them.'" It was the only way I see, or ever did see, how you could handle it, and it was exactly the plan that was being followed in other places. I can show you, if you want it, that instead of this contract being, as some people have hinted, an unprecedented monstrosity, it has got lots of good precedents, and that the precedents have gone further than it went, and that those that went the furthest got the best ultimate result in the settlement generally.

The CHAIRMAN. Who entered into the contract with the Alabama Power Co. for the Government?

Colonel JOYES. The signatory officer was Col. William Williams.

The CHAIRMAN. Did you have anything to do with it?

Colonel JOYES. I had a great deal to do with it; all the time I took a leading part. I was in charge of all the negotiations from December, 1917, up to about August, 1918, or thereabouts, and from that time on I took a leading part in the negotiations. Col. William Williams was the one who was looking out to see that the thing was put into the best possible legal shape it could be, and yet put in nothing in the way of a provision that I did not assent to. There were other people with us. I had men of large experience in power matters, who had been frequently employed by several of the big investment companies, and I had some lawyers with me who had had considerable experience. One man who helped a great deal a number of times was Mr. Anson Burchard, vice president of the General Electric Co., who was in a strictly advisory capacity, so far as any official appointment was concerned; but he was a man who had been brought in by Mr. Stettinius to handle some of the certain broad aspects of business for him and give him the big business point of view upon them as to what they really were.

The CHAIRMAN. I take it from what you have stated that by reason of the fact that you did not use a dollar of the money that was appropriated in the act of 1916, and you did use the money from the fortifications allowances, at nitrate plant No. 2, you felt you were not running counter to any of the provisions of the act of June 3, 1916, in building that plant.

Colonel JOYES. I felt absolutely confident of it, sir; did it with that intent; and felt absolutely confident we were perfectly correct in it, and had been so advised by several people at the time. I never had any doubt of it.

The CHAIRMAN. I think that is about all the information we want on this subject. I think all the correspondence that you say Mr. Williams had regarding this matter you have either read to us or it is in the record. You have read to us those things which we did not have in the record before.

Colonel JOYES. I have read no correspondence of Colonel Williams. The correspondence I read was between me and the Ordnance Office, and the inclosures to it were the decisions from the Judge Advocate General's office.

Mr. PARKER. I want to know whether the correspondence on which you made the agreement with the Cyanamid people—

Colonel JOYES (interposing). Starting that work?

Mr. PARKER. The whole thing is in the record already?

Colonel JOYES. Yes; I think that is all in the record.

The CHAIRMAN. Some of the members of the committee will want to ask you some questions.

Colonel JOYES. I would like to volunteer one thing, Mr. Chairman, and that is in connection with this analysis I have made of the provisions for sale, several copies of which are around the table. That was intended to be helpful, and I did it because a view of that article, Article XXII, or whatever the number is, is very difficult to get from reading the contract. I had to sit down and make this analysis in order to understand it myself and know just what it meant, in spite of all the work I had done in connection with it. This analysis first gives a column covering the time or conditions under which the different alternatives come up, and then another column covering the provisions for disposition, and a third column stating what consideration there is.

The first section of that article says that three years after the end of the war the United States has the option to demand that the contractor purchase the

Warrior extension and the Warrior substation, and the consideration is the arbitration value.

The second section of the article says that if and when the accumulated fund shall equal or be greater than the actual total cost the United States has spent, then the contractor may demand that the United States convey title in the Warrior extension and the Warrior substation back. In that case the United States was to retain—and you will find that the contract supports this statement absolutely—the United States was to retain the total that had been paid in by the Alabama Power Co. to it from time to time while it was buying power from them, except such surplus as the Alabama Power Co. might have paid to the United States over and above the total original expense of the United States. In other words, under that settlement, if we took power from them long enough, bought enough power, under the contract there would have been enough money paid in by the Alabama Power Co. to the United States to more than cover the actual total expenditure that we had made on the proposition. In that event they could demand that we sell to them, and we would then sell to them at the total we had spent, every penny of it back. That was, of course, hypothetical, you would say, a thing never to be realized. But it would have been realized, and if you figure it out I think you will find that if we had gone on to the end of the period contemplated by the contract, 10 years, it would have been realized. We had no way of telling at that time how long the war would go on, and whether the plant would have a use after the war. So that is not altogether hypothetical.

The third alternative, in section 3, said that at any time whatever the contractor may demand that the United States convey title to him, provided he pays the total actual cost we have put into it.

The fourth alternative, in section 4, provided that after December 1, 1926, or prior to that, if the United States finally ceases to take energy, and the accumulated fund is less than the actual cost, the contractor may demand, eventually, that the plant be sold to it at a value to be arrived at by arbitration. Of course, if we are going to provide for any sale, if we are going to have an agreement that is worth anything, we have to touch upon the price. We could not set a firm price; neither side could then set a firm price, because we could not tell what the conditions would be, or the value of the plant, or anything of that kind. In some of the earlier contract drafts we wrote that the prewar cost would be the price, thinking that was the way to get at it. Ultimately we came around to what we considered a much happier expression of it, that the value as fixed by arbitration should be the value, and I think the definition of that value, the arrangements for arriving at it are sufficiently clear in the contract to show that that meant a fair value as a going concern at the time the appraisal was made.

The principle that has been followed in settling other contracts of a like status, has been that they figured out a reproduction value of the plant at the time the appraisal was made, estimating what it would cost to build that plant at the time of settlement, say, for example, to day. Then, assuming a plant actually built, say in 1918—it has been used for four years—and you charge off four years of depreciation, four years of the life of the plant are gone. So you arrive at a fair present value, and naturally there may be consideration, and I think should be and would be consideration given to the market for the product of the plant, and all other considerations indicating its value as a going concern. That was the thought we all had in our minds on our side, and I am sure the same thought was in the mind of the power company, from what I have heard them say. I am not speaking for them, but for myself.

The fifth proposition was another option, that if the contractor failed to purchase on the demand of the United States, the United States may sell to another party, but not for operation. But it must remove all of its property from the premises of the power company within six months. This being not a sale to the contractor, the price is, of course, problematical. It works no hardship upon the United States at all.

The situation was this. You look back at my original purchase order and you will find that I called upon the power company to grant us the temporary use of their land in order that we might build up there the facilities for what we wanted, and it was our thought all the time that it was a temporary use of their land and their facilities. There are plenty of precedents for that in other work done during the war. There was a coke-oven contract I happened to look at the other day, signed in May, 1918, to build a coke-oven plant, and

build it upon ground leased from the owners, who were to be the owners of the plant, and there is a provision there for the sale of the plant back to the people who owned the land. They were allied to near-by steel people, etc. To show how that kind of a contract is apt to work out, that contract was settled in 1920, and the Government had spent \$6,000,000 on the job, and it was closed out by payment back to the Government of \$4,140,000, about 70 per cent of the Government's war expenditure for that purpose, brought back to it and recaptured. I happened to see several others which were settled about: in that proportion, anywhere from 50-50 up to 75 per cent of the original expenditure came back to the Government.

There are some other provisions, such as financing power companies at other places, where the Government actually put in money after an arrangement was made by which they could do it, and they had not even the same color that we had here. It was not a question of the United States ever owning anything. The United States just put the money in the bank and the people drew upon it without any restrictions whatever, other than the business undertaking to put it into the plant that they were building for Government purposes. They put in some money of their own, and upon final settlement the power company was not to repay all of the advance, but got credit for depreciation, excess war costs, etc. The company owned the plant when they got through. There are two contracts—one the coke oven and one the power plant—and I could give you the details of several other coke ovens or power-plant transactions along those lines.

There is still another proposition, and this is the vital point, I think, in the whole of article 22 of the contract; that is, in section 6. The alternative there is provided that should anything be wrong or unenforceable in any of the preceding alternatives, if the plant be not sold in 10 years from the date of the contract, 1917, or if for any reason the United States did not take energy from the company for 365 days, the United States shall, upon demand, remove the Warrior extension and the Warrior substation within six months. In other words, it ceases its temporary use of the property of the Alabama Power Co. and gets out of the way; that is, unless the United States shall exercise its option No. 1 and demand that the contractor purchase at the arbitrated value. That is all there is in that.

Mr. PARKER. I thought No. 1 related to the cost?

Colonel JOYES. No, sir; option No. 1 is on arbitration value. The seventh provision relates to the transmission line.

The CHAIRMAN. You have just one more provision?

Colonel JOYES. Yes, sir; the seventh relates to the transmission line, and says if the United States shall take no energy under this contract for two years, or in any event in 1927, the United States shall remove the transmission line from the Alabama Power Co.'s premises, unless the United States prefers to demand that the contractor purchase it at an arbitrated value—that is the gist of it.

The CHAIRMAN. Mr. McKenzie will yield to Mr. Greene, because Mr. Greene will not be able to be here at 2 o'clock.

Mr. GREENE. Colonel, I rather think, on reflection, that my questions have been anticipated in some of the questions that have been directed to you already. But I want to be quite sure I understand this situation as you do.

Acting under the direction of section 124 of the national-defense act you established the nitrate plant that was contemplated by it, at what is now called nitrate plant No. 1?

Colonel JOYES. Yes, sir.

Mr. GREENE. About what date was that policy determined upon and work begun or preparations for it begun?

Colonel JOYES. I am quite sure it was within a day or two of July 13, 1917. It was within a day or two of that date that the matter was approved by the President and by the Secretary of War and handed to General Crozier and passed over to me.

Mr. GREENE. What was your understanding of the language of section 124, that the Government was embarking in anything like an established and continuous manufacture of nitrate and fertilizer, or that such plant as was to be set up under section 124 was in the nature of experimental, research work, looking toward the development of the art?

Colonel JOYES. I think the language unquestionably, primarily, covered investigation and preliminary searching out, and at the same time the act did provide specifically that the President might take over processes and take over

power facilities, make power developments, etc. And it provided for the sale of the proceeds, etc. I thought there was ample provision of law under that, if it had been desired to do it, and if the time had been thought to be ripe to go into an actual business, the business being primarily for munitions and material for munitions, and rather incidentally for agriculture.

Mr. GREENE. When you had therefore done the business you did with what is now known as nitrate plant No. 1 you thought you were in compliance with section 124 of the national defense act, and that you had carried out its general intent and purpose.

Colonel JOYES. Yes, sir; but not necessarily completely.

Mr. GREENE. As far as you went?

Colonel JOYES. Directly under it.

Mr. GREENE. When you started on No. 2 that is the time you divorced yourself from section 124 of the national defense act, after some reflection, and after thought about it, taking counsel to make yourself very clear in your position that you were no longer acting under that; believing that you had accomplished, as far as you had gone, the purpose of section 124 in another place; is that your understanding?

Colonel JOYES. Yes, sir; especially so because the cyanamid process had been quite considerably before the nitrate commission, which made recommendations as to the program to be followed out, and they had declined to recommend it. I would prefer, if the committee is interested in that, that you look up the actual wording of the report of the nitrate commission. I can give it to you, if you desire it, because I would be afraid that a little turn of a phrase might have a wrong meaning. I do not mean to say they ever recommended against it, but they had considered and passed over it, and recommended other action.

Mr. GREENE. What I am getting at is where you differentiated between not merely the authority and limitation of section 124 of the national defense act, but this property which is now under our consideration.

If it is to be understood that nitrate plant No. 1 was proceeded with, as far as it did go, under the terms, authority, and limitations of section 124 of the national defense act, then we are to understand that nitrate plant No. 2 was primarily and completely a war proposition?

Colonel JOYES. Absolutely such, in my opinion; that was my intent, and that was supported by the nature of the actual need which inspired the creation of plant No. 2.

(Thereupon, the committee took a recess until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to recess, at 2 o'clock p. m.

STATEMENT OF COL. J. W. JOYES, ORDNANCE DEPARTMENT, UNITED STATES ARMY—Resumed.

The CHAIRMAN. Colonel, when we took a recess, the members of the committee were about to begin asking you questions. Out of order, Mr. Greene, of Vermont, asked you a few questions. We will now begin by having Mr. McKenzie ask you some questions, he being the senior member on the committee.

Mr. MCKENZIE. Colonel Joyes, you are a commissioned officer in the Regular Army?

Colonel JOYES. Yes, sir.

Mr. MCKENZIE. How long have you been commissioned in the Regular Army?

Colonel JOYES. My first commission was dated in 1894, June 12 or thereabouts—1894, when I graduated from the Military Academy.

Mr. MCKENZIE. You are a graduate of the West Point Military Academy?

Colonel JOYES. Yes, sir.

Mr. MCKENZIE. Have you been continuously assigned to the Ordnance Department?

Colonel JOYES. I have; since 1897.

Mr. MCKENZIE. You explained at some length this morning, Colonel, the different funds from which the construction at Gorgas and also at Muscle Shoals, used in construction at those two different places, and gave a very interesting explanation. However, do you consider that material at this time so far as this committee is concerned?

Colonel JOYES. I have not any opinion about that, sir, except I have noticed a good many remarks on the record before to which considerable importance seemed to be attached, so I thought it was necessary to clear it up by a statement of the facts.

Mr. MCKENZIE. You testified this morning that you were chief of the division, as I understand, handling this character of work.

Colonel JOYES. Yes, sir.

Mr. MCKENZIE. And as such chief, if I understood your testimony correctly, you assumed full and complete responsibility for all that occurred in connection with the development at the Warrior steam plant and at Muscle Shoals.

Colonel JOYES. Yes, sir. The purpose of the Division T, later called the Nitrate Division, to which I was assigned in May, 1917, was, of course, the carrying out of the different purposes and objects of the national defense act, section 124, the nitrate supply, which was largely the investigation of possible processes and perhaps the development of promising processes; in general, to look around and see what we could find, in addition to the carrying out of certain specific things that had been recommended by the Nitrates Commission. Now, pursuant to that, after starting out on the special work which the commission had recommended, that was No. 1 plant—

Mr. MCKENZIE. Can you give us the date of the report of that commission?

Colonel JOYES. Yes, sir; that was recommended by the commission and we followed—

Mr. MCKENZIE (interposing). I mean the date when they filed the report of which you are speaking.

Colonel JOYES. I think that report was dated May 11, 1917, or thereabouts, and it had been under discussion for some little time, and it was finally approved on or about the 13th of July, 1917. That, I think, was the exact date that Mr. Baker, Secretary of War, handed it over with his and the President's approval to General Crozier, Chief of Ordnance, and the same day General Crozier handed it to me.

In going ahead with the building of the synthetic ammonia process, we also began to look around and investigate certain other processes; among them was the sodium cyanide process and one or two others, none of which was in a sufficiently developed position to be of any use, but we looked ahead to an orderly study of all the processes that might be heard from and to do what we could to investigate them.

In the course of that, a prominent process was the cyanamid process, and, as I say, that was one which the commission had considered very carefully and which they had not seen fit to recommend for any immediate attention by the Government for several reasons: In the first place, it was a thoroughly developed process. Another reason, not exactly stated by the commission, but, I think, to be inferred from their report, was that they thought the cyanamid process would not be the most economical process of the near future; but, anyhow, we thought it worth while to reexamine that a little bit, realizing that we were then in the war and might have a need to make some use of certain processes of fixation for the immediate, urgent demands of the war. We cast about to see what we could use in an emergency of that kind, and we decided in our minds that the cyanamid process was the only process we could use for that purpose, and so that was the answer we had ready to make when we were asked if we could help out, in October, 1917, in the provision of needs for the war. So you see how we were drawn into it in that way. It was rather an incident, due to the fact that we were an organization already established, with some information as to fixation processes.

Mr. MCKENZIE. At any rate, you decided that you would undertake to process nitrates in two ways—by the cyanamid process and also by the so-called Haber process, or the synthetic method, I believe you call it.

Colonel JOYES. Yes, sir.

Mr. MCKENZIE. Now, Colonel, you testified this morning that you had a number of assistants.

Colonel JOYES. Yes, sir.

Mr. MCKENZIE. Who were also commissioned officers in the Army?

Colonel JOYES. Yes.

Mr. MCKENZIE. Emergency officers?

Colonel JOYES. The principal ones were; yes, sir. I had no Regular officers assigned to me at all at that time. I had a number of men commissioned in the National Army, or Reserve Corps first and then the National Army, and

then some of them later on got commissions in the Regular Army, but I also had some civilians.

Mr. McKENZIE. Did you have anything to do with the procuring of commissions for these various officers that were under you in this department?

Colonel JOYES. Oh, yes.

Mr. McKENZIE. You did?

Colonel JOYES. The only way you could get an officer in those days was to try to find somebody you thought had what you needed, and go out and rustle for him and fight with other people for him.

Mr. McKENZIE. Was Colonel Williams commissioned at your request?

Colonel JOYES. No, sir; I never heard of him until I took the contract to him; at least, I never heard of him directly.

Mr. McKENZIE. Were any of the officers you mentioned this morning commissioned at your request?

Colonel JOYES. I do not think so. Those lawyers?

Mr. McKENZIE. Yes.

Colonel JOYES. I do not think any of them, except possibly Nightingale. Captain Noble, I think, was already commissioned before I got him. I asked to have him transferred to me if I remember correctly. I never saw him until he reported for duty. I know that.

Mr. McKENZIE. Just what procedure did you go through with down there when you wanted to commission a man? How was it brought about?

Colonel JOYES. Well you generally tried to find where you could get a man who had what you needed. You generally had an interview with him to find out if he appealed to you and then you would get him to make up an application and pass it through some of the boards that they had. They changed the organization several different times during different epochs of the war but you always had to go first through the personnel branch of the Ordnance Department and get them to O. K. it and then get the man commissioned by the "higher-ups" in the War Department. It was a pretty slow process sometimes and sometimes it was rather easy.

Mr. McKENZIE. Is it not true that frequently a man was commissioned an officer in the Army on the recommendation of friends who might come to intercede for him—I mean in the different staff corps?

Colonel JOYES. I have not much doubt that was done in some cases. But I do not think that the intercession of friends was a determining factor in many appointments made during this war. It was remarkably clear from that sort of thing. It was always required that the man being proposed for a commission or seeking one would have to put up some letters from persons that he knew, stating what kind of activities he had been engaged in, what kind of education and capabilities he had, and so on. It was always preferable and more weight was attached to those that did state something specific about his capabilities, his education, and the kind of position he had held of trust, etc.

Mr. McKENZIE. I do not take it that that is material, Colonel, in this particular examination.

Colonel JOYES. No, sir.

Mr. McKENZIE. Inasmuch as you have already stated that so far as these two particular contracts are concerned, the one with the Alabama Power Co. and the one with the Air Nitrates Corporation, they had your unqualified approval.

Colonel JOYES. Yes, sir; meaning, of course, approval in the sense of concurrence—not necessarily of admiration for each individual point of the contract.

Mr. McKENZIE. But you O. K'd them.

Colonel JOYES. I officially approved them; yes, sir.

Mr. McKENZIE. And you were the representative of the United States Government that had the power through your inferior officers to bind the Government in these two contracts and did do so?

Colonel JOYES. Essentially, that is correct, but it is not exactly accurate, Mr. McKENZIE, because at certain times I did not have the delegated power to put my name to a contract.

Mr. McKENZIE. I see.

Colonel JOYES. And I did not always have the unqualified power to sign a contract and have it stand and go forth and be executed without approval by some other authority.

Now, coming to this Alabama Power Co. contract, for example, I knew you would ask questions about that particularly, so I happened to get up the ap-

proval records for that, and I will show you what we had on it. I think I have that here. Take, for instance, this Alabama Power Co. contract; this is what they call the approval sheet that was attached to that contract, headed with the title of the contract and signed first by me as negotiator, signed by C. F. Beames, major, Ordnance Department, United States Army, and by E. P. Prentice, major, Ordnance Department, United States Army—and I will say, by the way, there, that Major Beames was under me and was one of my subordinates. Then there was Major Prentice, Capt. G. M. Alexander, Lieut. Col. Dale Bumstead, Ordnance Department, Maj. R. H. Swartwout, Ordnance Department. Those four, I think, were all officers of the procurement division of the Ordnance Department, and it was their especial duty to examine contracts that were put up to them and give them an examination, and sign if they concurred. They had no part in the negotiations and were therefore in the nature of officers of review. Then, below that appears the notation, "Approved by Board of Contract Review of Procurement Division, November 8, 1918, (signed) W. Arthur Babson, secretary." Below that appears this statement: "I concur in the approval of this contract, (signed) Anson W. Burchard." He is the vice president of the General Electric Co. and was the thoroughly trusted but not official representative of the Assistant Secretary—first Mr. Stettinius and later Mr. Crowell.

Mr. McKENZIE. Colonel, you have stated that the report of the nitrates commission was filed, I think, some time in May, 1917.

Colonel JOYES. Yes, sir.

Mr. McKENZIE. Up to that time had you taken any steps to develop the production of nitrates?

Colonel JOYES. I had not been connected with the matter at all until the later days of May, 1917. I was in command at the Picatinny Arsenal, the powder factory in New Jersey, and was brought out of that establishment about—I left there about the 27th of May or else arrived here on the 27th of May.

Mr. McKENZIE. How soon after that did you become interested in nitrate production?

Colonel JOYES. Immediately I arrived in this city, in the last days of May. I was told that that was my duty and I began to read up on it, because up to then I had paid no particular attention to it, except as a matter of news and current information; and I was informed of the report of this commission and was told that it was just waiting to have the attention of the President and the Secretary of War, which I told you we got about the middle of July—July 13th, I think.

Mr. McKENZIE. Now, when did you first come in touch with the Muscle Shoals proposition, the cyanamid proposition, and the Alabama Power Co. proposition? I want to know first when.

Colonel JOYES. In September of 1917, pursuant to the general examination of the possible processes of fixation of which I have spoken to you, I decided that we would like to know a little more about the cyanamid process than we had found of record, and I had my office get in touch with Mr. Washburn, of the Cyanamid Co., telling him we would like to know a little more about it, and should like to hear a little from him as to its possibilities and so on, and people from my office had one or two interviews with him, and somewhere along in that time I met him, but the talk with him over the situation was mostly done, I think, by Colonel White, who is the head of the chemical engineering department of the University of Michigan now and before the war, and also by Captain Gaillard here. Then coming out of that we thought it well to have an explicit statement from the Cyanamid Co. as to what they would do in case we needed them, and I had such a letter from them, making a specific statement as to the general character of the terms upon which they would undertake to build a plant for the United States. That was some time prior to the date, October 29, that I cited to you as the first proposal for the Muscle Shoals plant, because it was not a proposal specifically for the Muscle Shoals plant, this earlier one, nor was it one for exactly that type or size of plant. You get the difference I am trying to make clear there?

Mr. McKENZIE. Yes.

Colonel JOYES. That was the situation then.

Mr. McKENZIE. Now, you had been in charge of this matter from the latter part of May until September. Had you had the matter up with anyone else other than Mr. Washburn prior to that time?

Colonel JOYES. We had conversations with a great many people as to different processes. I had had, of course, some conversations or talks about the cyanamid as well as other processes with different people.

Mr. McKENZIE. Up to that time had you visited Muscle Shoals or the Warrior steam plant?

Colonel JOYES. Not the Warrior steam plant, sir, at all, but I had visited Muscle Shoals.

Mr. McKENZIE. When?

Colonel JOYES. Some time probably in July or August. The way of that was this: I was hunting for a suitable place to build the first nitrate plant—just that—and I had such people as I could get hold of, as I was building up my organization, and I would send them out on the road to look at any place we thought at all promising, and when they got some place they thought would be worth while, I would go down and inspect it. In the course of that period I made probably three or four trips myself to see places that had been scouted out. We started first to try to find a site for that plant in the western end of Virginia, which was the section particularly pointed out by the Nitrates Commission, for various reasons, but mainly because of its proximity to the sulphuric acid plant of the General Chemical Co., at Pulaski. That was the main reason. We tried hard to get one around there, but it was a very mountainous country, very uneven, and it was difficult to find an area suited for our work, etc. So we gradually went on down until we got down as far as Muscle Shoals.

Mr. McKENZIE. And you visited Muscle Shoals in July?

Colonel JOYES. Somewhere along there.

Mr. McKENZIE. And then along in September or October you sent for Mr. Washburn, as I understand you?

Colonel JOYES. Yes.

Mr. McKENZIE. And then you entered into negotiations with Mr. Washburn?

Colonel JOYES. Yes.

Mr. McKENZIE. Did he represent the Alabama Power Co. at that time?

Colonel JOYES. He did not, sir.

Mr. McKENZIE. He represented the American Cyanamid Co.?

Colonel JOYES. The American Cyanamid Co.

Mr. McKENZIE. And that had to do only with the Muscle Shoals proposition?

Colonel JOYES. Yes, sir; the nitrate plant to be built at Muscle Shoals.

Mr. McKENZIE. Now, then, when did you come in touch with the representatives of the Alabama Power Co.?

Colonel JOYES. I think absolutely the first point of contact with them was their proposal of November 6, I think, 1917. [Witness subsequently recalls a letter dated Nov. 1, 1917.] It has been read and put in the record, which came. I am sure, before I had seen any of the officials of the Alabama Power Co. even, or any of their properties, or anything, and then following that we had some conversation with them, which I do not think began until the latter part of November or early in December—somewhere along around there.

Mr. McKENZIE. At that time had you decided to develop Muscle Shoals through the American Cyanamid Co.?

Colonel JOYES. I do not like to concur in the use of that expression, "develop Muscle Shoals," but at that time—

Mr. McKENZIE (interposing). Well, that may be a wrong term.

Colonel JOYES. At the time I received the proposal from the Alabama Power Co. we had not decided to do so, because that was dated November 6, and received a couple of days later, and we did not decide until the meeting of November 13 to accept the Cyanamid Co.'s offer and to build the nitrate plant at Muscle Shoals. The reason I object to the use of the words "develop Muscle Shoals" is because that takes us into the civil engineering part of it, with which I had no connection whatever, the dam and the water-power development.

Mr. McKENZIE. Then, if I understand your testimony, you accepted the offer of the Alabama Power Co. first.

Colonel JOYES. No, sir; we received it, but did not accept it.

Mr. McKENZIE. Then you accepted the proposition of the American Cyanamid Co. along in the afternoon, was it?

Colonel JOYES. About midnight, November 13.

Mr. McKENZIE. Then when did you accept the Alabama Power Co. proposition?

Colonel JOYES. The only acceptance of it or the only thing that could be called an acceptance of it were the purchase orders I wrote on December 7, 1917.

Mr. McKENZIE. That was some time afterwards.

Colonel JOYES. Yes, sir.

Mr. McKENZIE. At the time you were having this interview or conversation or conference, whatever you might term it, with the American Cyanamid Co., did you at that time have in mind the taking over of the Alabama Power Co.?

Colonel JOYES. We had it in our minds that in order to carry out the plans that we were considering with the American Cyanamid Co., we would have to make some provision for getting the power for the first half production of the nitrate plant from the Alabama Power Co. There was no other place to get it.

Mr. McKENZIE. And that would be 55,000 tons or thereabouts.

Colonel JOYES. That would be the production of ammonium nitrate from the nitrate plant and the power for that was variously estimated in those days. There was some uncertainty about it, but we figured from thirty to thirty-five thousand kilowatts would carry us through at that time.

Mr. McKENZIE. At that time you did not have the Haber process in mind, when you were having this conference?

Colonel JOYES. We had it very prominently in mind, because we were building a plant to use it—a slight variant of the Haber process—but we did not contemplate the use of it for the war needs which were then being stated to us as so urgent, because we knew and we were getting to know more and more every day that we could not rely upon it being in production at any given, definite time.

Mr. McKENZIE. Who was at the head of the War Industries Board at that time, Colonel?

Colonel JOYES. The man who was generally recognized as the active head, I believe, was Mr. Baruch.

Mr. McKENZIE. Mr. Barney Baruch? Did you have any conversation with him about this matter?

Colonel JOYES. Yes; I had quite a few conversations with him and with his technical assistants. He was present at several of the conferences in the office of the Chief of Ordnance at which the several successive proposals of the American Cyanamid Co. were considered, from October 29 to November 13, 1917. Furthermore, he introduced me to the ruling board or the clearance committee, or whatever it was called, the committee which had to clear any big project, in the War Industries Board, when we presented this proposition of the American Cyanamid Co. That was, I think, on or about the 14th or 15th of November, 1917, after General Crozier, in his office and with this advice, had decided to take it, and then it had to go and be cleared through the War Industries Board. I took it up and Mr. Baruch went in with me and presented the matter in my presence to this board, the War Industries Board, and they had some discussion of it. It was put to a vote and approved.

Mr. McKENZIE. Now, Colonel, at that time, of course, you have stated you had in mind the development of the cyanamid process at Muscle Shoals and that the Alabama Power Co. was a secondary consideration from which plant you expected to get a certain amount of power to aid you in the initial manufacture of one-half the capacity of the plant.

Colonel JOYES. Yes, sir.

Mr. McKENZIE. If I understood your testimony this morning, you stated that you did not feel disposed to take over the plant of the Alabama Power Co. at that time, which would disturb them in their sale of their product to their patrons or customers.

Colonel JOYES. It was essentially like that, only it was not consideration for their feelings or their pocketbooks that kept us from doing it. It was a consideration of what complications would arise and what we would get the United States into. Of course, we considered everybody's rights and we did not want to go in and disturb anybody in his business if it could be avoided; but if it was essential, and if it was going to be advantageous to the Government, we would not have hesitated a moment.

Mr. McKENZIE. Now, Colonel, you were familiar with what was going on at that time all over the country, were you not?

Colonel JOYES. Yes, sir.

Mr. McKENZIE. That thousands of acres of farms were being taken and just blanket authority given almost over entire counties.

Colonel JOYES. Yes, sir.

Mr. McKENZIE. And the rights of the people just simply set at naught because it was justifiable on account of the fact that we were in war. Is not that true?

Colonel JOYES. That is true; yes, sir.

Mr. McKENZIE. Now, then, you were also aware of the fact, were you not, Colonel, at that time, that Mr. Baruch as president of the War Industries Board was also in charge of the priorities board?

Colonel JOYES. Perfectly.

Mr. McKENZIE. And that he stated in his testimony that a citizen could not even get a piece of zinc to fix up his kitchen sink without a priority order?

Colonel JOYES. Yes; that was rather to make it striking; he did not mean it literally; but the idea is perfectly sound.

Mr. McKENZIE. He was all-powerful?

Colonel JOYES. Quite right.

Mr. McKENZIE. He had absolute power; more power than any man has ever exercised in this country. Is not that true?

Colonel JOYES. Yes, sir.

Mr. McKENZIE. Now, then, we come to the Alabama Power Co., and you say you wanted that power to help develop the first unit at Muscle Shoals; but instead of taking the strong arm of Mr. Baruch and reaching out and putting it on that plant and saying: "The Government needs this power," what did you do?

Colonel JOYES. I will tell you what I did in just a moment, and in the meanwhile you will remember that this morning I told you that when the law was passed that permitted us to take over any lands—

Mr. McKENZIE (interposing). Well, we did take lands, however?

Colonel JOYES. The first law that permitted us to take over lands or commandeer lands for anything except military camps was passed on April 11, 1918. For military camps and the like we could take lands. You gentlemen had passed a law permitting us to do that in July, 1917. You did not do it for any of the munitions production at all until April, 1918. Again, we come to the matter of commandeering supplies, and the national defense act of 1916 allowed us to commandeer supplies.

Mr. McKENZIE. And plants, did it not?

Colonel JOYES. But let us look at the language of that act. I have it here, section 120. This is a copy with all the corrections to date, but the index shows that this is just exactly as it was originally passed:

"SEC. 120. Purchase or procurement of military supplies in time of actual or imminent war: The President in time of war or when war is imminent is empowered, through the head of any department of the Government, in addition to the present authorized methods of purchase or procurement, to place an order with any individual, firm, association, company, corporation, or organized manufacturing industry for such product or material as may be required," etc.

Now, there was a great fight over that language in 1917, and I remember distinctly hearing a lot of discussion between lawyers and officers of the Government as to whether power could be considered "product or material," as expressed in the language of that law, and the general consensus of opinion was adverse. I am speaking of the period of 1917, and I remember hearing a number of discussions and I remember getting, verbally, opinions from people in position of authority or in a position to know, at least, who told me that you could not consider power a product or material. Later, they did.

Mr. McKENZIE. Colonel, I do not want to weary you.

Colonel JOYES. That is all right.

Mr. McKENZIE. But I just want to get a few of these facts.

Colonel JOYES. I think that is a very pertinent point, a very pertinent point.

Mr. McKENZIE. What was the capacity of that Warrior plant, in kilowatts or in horsepower.

Colonel JOYES. The plant that the Alabama Power Co. had, the steam power plant on the Black Warrior River, was generally called a 20,000-kilowatt plant. That means that running about as it would be expected to run in service it would deliver about that amount of power continuously, capable of going perhaps a little over.

Mr. McKENZIE. Would that have furnished you sufficient power to go on with the construction at Muscle Shoals?

Colonel JOYES. Oh, if we had that working for us it would have been very useful in the construction period and would have given us a considerable portion of what we wanted for our first production at the Muscle Shoals plant; but we did not have the call upon that without taking it away from other people.

Mr. McKENZIE. That is the point I am getting at.

Colonel JOYES. When we talk about that steam-power plant at the Warrior, you really can not divorce that from its function or its place in the system of

the Alabama Power Co.. The company, of course, had water power—some 60,000 to 70,000 horsepower—and they aimed to sell water power whenever the river was running enough to give it. Then, like all other power companies with run-of-the-river power, they had to have steam stand-by plants to bolster that up, and when the river was only running about 15,000 kilowatts, say, and they had contracts for 35,000 kilowatts that they had to meet, then they would start up this steam plant on the Warrior and supply the other 20,000. That is how it was run and organized.

Mr. McKENZIE. What I am trying to get at is your justification of the procedure in connection with this plant, having in mind what was happening all over the country in other places. For instance, men were prevented from using their automobiles on Sundays in order to save gasoline and we were compelled to eat black bread in order to conserve flour and everybody was discommoded in one way or another, and at the same time, I want to know your reason why it was not just as fair to say to the Alabama Power Co., "We want the use of your power for so long a time while we develop power at Muscle Shoals," and, of course, they would have received compensation for it?

Colonel JOYES. There was not the slightest hesitation to do that, but they could not make any additional power, any more than they had facilities to make.

Mr. McKENZIE. I understand that.

Colonel JOYES. And what we took from them was not taken from them but taken from their customers. We had a list of their customers and looked them over and found that such a great proportion of those customers were businesses that were essential to the war, that it would not have been justifiable to stop the power for them. For instance, there were all the steel mills at Birmingham—I do not mean all of them, but many of them—that took the power, and there were ferromanganese plants, and ferromanganese was one article of great stringency, and I think it had about one of the highest priorities of any branch of production, and there were other things along that line. Then there were certain other things, some of the cities depended upon it for their light and essential power of that nature, and altogether we thought there were too many of those things to make it possible for us to interfere with that supply and that we had to provide some additional facilities.

Mr. McKENZIE. Now, you built a transmission line and you got some power over that to be utilized in the construction at Muscle Shoals. Is not that true?

Colonel JOYES. Yes sir; it was ready in the spring of 1918.

Mr. McKENZIE. In other words, you got whatever the Alabama Power Co. did not have a market for down in Alabama?

Colonel JOYES. Provided we needed it.

Mr. McKENZIE. Provided you needed it; yes; but the thing I would like to have you explain a little further, if you can, is the sacred rights enjoyed by these people down there over the other people in the country, and why you did not exercise the power which Mr. Baruch said he had, to simply put the strong arm of the Government on that plant and utilize it to such extent as the Government needed it.

Colonel JOYES. I have told you, sir, that we could, although there might not be laws for it, and we were not hesitating to do that a moment, so far as the power company was concerned, but it was not taking it away from them. It was taking it away from the industries which had a high priority, and we could not take it away from those industries. That is what it would have meant if we took the power from the Alabama Power Co. system without providing some additional facilities. Understand it might have been done at certain periods of the year, and it was so represented to us by the Alabama Power Co. We saw ourselves from an analysis of their records, all of which we had and looked over carefully, that at certain periods of the year they had a surplus of power and plenty of it, and we could have had it without a whimper and without hurting anybody at all. There was some more we could have taken without hurting the essential industries, but that was only for a brief period, and if we went in to rely on that and got our processes working the first thing we would know we would be up against a period when the river was low and there would not be any way for us to get power except then to take it away from ferromanganese and steel and some other things, and that was not a tolerable situation.

Mr. McKENZIE. At that time the Alabama Power Co. had a modestly constructed plant of about 100 feet square, did it not?

Colonel JOYES. So far as the power house goes, yes.

Mr. McKENZIE. A brick building.

Colonel JOYES. A brick building.

Mr. McKENZIE. What was the size of the building you constructed down there and what was the character of the construction?

Colonel JOYES. Something like the same.

Mr. McKENZIE. The same size?

Colonel JOYES. Something like it; a little larger.

Mr. McKENZIE. And permanently built?

Colonel JOYES. It was of brick construction, brick walls, steel to support the roof, etc., about what you have got to put up to put in modern power machinery. However, we called it temporary construction.

Mr. McKENZIE. I am not criticizing the construction.

Colonel JOYES. We called it temporary because we said we were making a temporary use of the land. There was a reason for that which I think it is well to state here. We knew the Alabama Power Co. was bonded pretty heavily and we knew that if we went in there and took the temporary use of their land, essentially as a lease, we were in some danger that our property might become subject to the lien of the previous creditors, and we did everything we could to safeguard against that, according to the best advices we had, and you will notice in the contract, in one place, we state that everything we put in there, on the land of the Alabama Power Co., is to be regarded as "personalty" and not subject to liens, etc. That was the reason for that, and that is why I want to be rather particular about saying that we stipulated that our structures should be regarded as temporary and as personalty.

Mr. McKENZIE. You expected only to use this as a war activity so far as the Government was concerned?

Colonel JOYES. That was our reason for putting it in, sir; and yet we drew the contract for power for 10 years. We did not want to be in the position that if a need should exist the Government would be debarred from having power from that plant which it had built, so we proceeded to tie it up tight so that we could get our power for 10 years, if we wanted it.

Mr. McKENZIE. Now, Colonel, in order that I may distinctly understand you and be sure that there was not anything put over on you, and you have stated you approved all that was done down there, did you give your approval to the construction of 12 dwellings down there at a cost of \$5,000 apiece?

Colonel JOYES. Yes.

Mr. McKENZIE. Permanent dwellings?

Colonel JOYES. They were permanent in type but they were like all the rest, they were denominated as temporary.

Mr. McKENZIE. They would last for years, would they not?

Colonel JOYES. They would last for years; yes, sir.

Mr. McKENZIE. You also built some 20-odd semipermanent structures?

Colonel JOYES. Yes, sir.

Mr. McKENZIE. And you also built a hospital which was to have 30 beds in it?

Colonel JOYES. Yes, sir; a simple frame building.

Mr. McKENZIE. And a moving picture show building?

Colonel JOYES. Yes, sir.

Mr. McKENZIE. And did all of those things have your approval?

Colonel JOYES. Yes, sir.

Mr. McKENZIE. And this plant is situated 9 miles out from the railroad in a rather deserted sort of a place, is it not?

Colonel JOYES. Yes, sir; at the mouth of the coal mine, as they say down there. It is usually regarded as an ideal situation for a power plant.

Mr. McKENZIE. Do you contend those things were all necessary for the Government?

Colonel JOYES. I believe so, or I should not have approved them, sir. Of course, people might argue about them for a long time and all that, but you know there was a great deal of talk along in 1917, and if you will take up some of the old newspapers of that period you will find how the Government officers were criticised for not providing enough amusements and comforts and medical treatment for the workers on the plants, and this, that, and the other thing, so as to reduce the turnover—and there was a lot of that. However that is, I say, I think that a good deal of that sort of thing that was generally done ought to be unnecessary, but the situation was such you had to go into it and do it if you wanted your work done.

Mr. McKENZIE. Colonel, you have stated that in this contract with the Alabama Power Co., you felt you were conserving the interests of the Government.

Colonel JOYES. Yes, sir; that was our whole object, and we think we accomplished it.

Mr. McKENZIE. And you have also stated here this morning that in the month of June, I believe, or some month in the early part of 1918, a law was passed which would enable you to buy property.

Colonel JOYES. Yes, sir; April 11, 1918.

Mr. McKENZIE. The contract with the Alabama Power Co. was not signed until the fall of 1918, after the enactment of that law?

Colonel JOYES. Yes.

Mr. McKENZIE. Now, do you contend that it would not have been possible for you, as the representative of the Government, to have had a provision in that contract that the Government would have the right to buy the portion of the plant belonging to the Alabama Power Co. or the Alabama Power Co. have the right to buy that of the Government; in other words, have a reciprocal contract and in case they could not have agreed upon the price, that then arbitrators might come in and fix the price? Do you contend that you could not have put in that sort of a provision in order to protect the Government?

Colonel JOYES. I could have stood out for that sort of a provision if I had thought it was proper and right and advisable to do it. Unquestionably, after that law was passed, I could have done it, but there were a number of things that argued against it aside altogether from the inclination of the power company to agree to it. There was the question of more than the land involved; there was the question of the practicability of the operation of two separate establishments down there practically in the same kitchen. It would be like two people cooking in the same kitchen. That is about what it would have amounted to, and it did not seem to me to be a feasible, reasonable set-up. Furthermore, at that time we had gone along so long under a more or less reasonable, temporary working basis, which was based and rested primarily upon my original order which said that we wanted the temporary use of their land. It was an implied contract, and there was that matter to be considered. I would not have thought it exactly good faith, so far as that went, which might not have prevented my doing it if I thought it strictly advisable, but I thought that as the Government had been obliged to go down there and put in that power plant, the very best proposition that they could get hold of was to get the people who could make good use of it tied up so that they would have to buy it, and I think we have done that.

Mr. McKENZIE. Now, Colonel, this is my last question: If you at that time could have looked down through the coming months to this present moment you can see where such a provision as that or something like that would have saved our Government considerable embarrassment at this time?

Colonel JOYES. I do not see that, sir. I would say that we were not looking for embarrassments or looking to avoid embarrassments; we were looking to see what we could do to protect the physical property and assets of the United States and its equities, and we think we did that, and that is the point we were after. We never contemplated for the sake of some other interest anybody would ever wish to take one man's property from him and hand it to somebody else, and that statement is made with no impertinent reflection upon any particular offer or anything of the kind, but it is the situation. We were looking out to protect the money we had to spend, and just that.

Mr. JAMES. Colonel, you had some trouble doing business with both the Alabama Power Co. and the American Cyanamid Co., did you not?

Colonel JOYES. We did not have altogether complete harmony at all times; no, sir.

Mr. JAMES. And frequently, in order to do business with the American Cyanamid Co., you had to follow along with their views?

Colonel JOYES. Oh, yes, sir; to get the results we were after.

Mr. JAMES. What is the date of that first allotment of \$300,000 that was made?

Colonel JOYES. I think it was \$200,000, but the amount is immaterial. I can give you that, sir.

Mr. JAMES. I mean for nitrate plant No. 2.

Colonel JOYES. On November 23, 1917, the sum of \$200,000, out of the \$20,000,000 carried by section 124 of the national defense act, was allotted for the purpose of purchasing the site for the No. 2 nitrate plant. That was allotted for-

the President on that day, and I got it within a few days thereafter. The exact date of that, I think, would not be necessary, but it was within a few days thereafter.

Mr. JAMES. When was the first payment due on the land purchased?

Colonel JOYES. No definite date ever agreed upon for that, sir. When we went down there we took over the land. We marked out what we wanted and walked around and then a local board was established to go out and see the owners.

Mr. JAMES. That was the air nitrates plant.

Colonel JOYES (continuing). We told them to get busy and get their evidence of title in and to arrive at a price that they thought was reasonable and see whether we could accept it or whether we would have to condemn or try to condemn. We were only talking about condemning in those days, because we had no authority to condemn, but anyway we talked it to them. It takes a long, long time always to get a proper certificate of title, and down there it seemed as if it took an interminable time, because the people who were undertaking to handle the business for us were trying to handle it all in a lump, and we could not get anything through to the point where we could pay for it. People came to us in great hardship, apparently, for money. They had been run out of their homes and they wanted the money and we could not draw a cent for them, because we had not got sufficient proof that they were the clear owners to pass title. That was a year after that time.

Mr. JAMES. Are you talking now about the nitrate plant No. 1 or No. 2?

Colonel JOYES. I am talking about No. 2, sir. The same thing would almost apply to No. 1, but we had a little less trouble there because I started that in early and all the different boards for keeping control of this, that and the other thing had not been organized, and I got a little bit the jump on them and so I handled it with my own people, and I was able to push that a little better, and my payments were made there a little more promptly than they were made through the regular channels on the other plant.

Mr. JAMES. It was about November 23, 1917, that you started to tell the people down there that if they did not turn over the land for a site for nitrate plant No. 2, you would condemn their land?

Colonel JOYES. We did not ask them to turn it over. We went in and took it. We asked them to agree to a reasonable price, and most of them did. That was largely looked out for by some of the local interests around there, the associations and so forth. They generally saw that a reasonable price was stated.

Mr. JAMES. If the payments had been made at that time, they would have come out of the national defense act, would they not?

Colonel JOYES. I think we probably would have paid them out of that because we had nothing else that we thought we could pay them out of.

Mr. JAMES. And if the money had been paid at that time all the sites would have been under the national defense act?

Colonel JOYES. Yes, sir.

Mr. JAMES. That was your intention at that time?

Colonel JOYES. That was the intention at that time, sir.

Mr. JAMES. But afterwards you found out, in 1919, that you could do it in some other way.

Colonel JOYES. Yes, sir.

Mr. JAMES. Do you figure that that kind of bookkeeping will nullify the national defense act when you purchased this ground with the intention of taking it out of the national defense act.

Colonel JOYES. I do not think I quite get your point. If I do, you mean why did I change my mind or change the plan from the first provision that was made.

Mr. JAMES. I know why you changed your mind. If the land was paid for in November, 1917, it would have been paid for out of money allotted you out of the national defense act.

Colonel JOYES. Probably; yes, sir.

Mr. JAMES. But you let the matter drift and then on January 20, 1919, you made a journal entry taking it out of some other fund instead of the national defense act.

Colonel JOYES. It was a different thing from a journal entry. What I had done therefore had been simply to carry a certain fund in my ledger on the credit side and I had never spent any of it, and before I got ready to spend it, or before I was able to spend it, then I had another account to charge it to. It never was paid out and then charged over again from account to account; no.

Mr. JAMES. Was there no money paid on any of that land until 1919?

Colonel JOYES. That is my remembrance of it, sir, and that can easily be verified by an actual examination of the books which, of course, would be much more reliable than my remembrance at this time. I am quite sure of it but I think we could have the people who are in charge of the books now go right over them and look it up and give you a specific communication about it. That would be the best way. I am confident of it.

The CHAIRMAN. Who has charge of those books now?

Colonel JOYES. Major Burns. He was here this morning but is not here now.

Captain GAILLARD. I am from this office and I will get that information.

The CHAIRMAN. Will you kindly let the committee know about that.

Captain GAILLARD. Yes, sir.

MARCH 13, 1919.

Memorandum for the Secretary of War:

I hereby authorize and direct the following revocation and allotments of funds appropriated by the Congress in the "section 124, nitrate supply" of the act approved June 3, 1916, namely:

Revoked:

The sums allotted by me Nov. 27, 1917, and Mar. 2, 1918, for the purchase of a site for an ammonium nitrate factory, aggregating----- \$350,000

Allotted for use by the Secretary of War:

(a) For the purchase of United States patents protecting processes incident to nitrogen fixation, etc.----- 10,000

(b) For the active prosecution of investigation of processes for the industrial production of nitrate compounds useful in the manufacture of explosives or fertilizers----- 340,000

Approved April 8, 1919.

WOODBROW WILSON,
President.

A certified true copy: 4-30-19.

P. B. McCONVILLE,
Lieutenant, Ordnance Department, United States Army.

A true copy of a certified copy, signed by P. B. McConville, Lieutenant, Ordnance Department, United States Army.

G. B. ATTERSALL.

Purchase of site for United States nitrate plant No. 2, "Nitrate Plants, Secretary of War, allotment F."

Date.	Item.	Procurement request No.	Apportionment.
1919.			
Feb. 4	P. R. 117960.....	2487	\$350,000
May 10	Revocation nitrate No. 27 F 112.4 (2878).....	2487	350,000

A true copy of a page for the ledger of the nitrate division.

G. B. ATTERSALL.

March 11, 1921.

Mr. KEARNS. At the time you entered into negotiations with the Alabama Power Co. did you have the right to condemn the land?

Colonel JOYES. None that we could find possible, sir.

Mr. KEARNS. Then that is the reason you assign why you did not condemn the property?

Colonel JOYES. That was only one of the reasons, sir. That was one reason and sufficient for that, but in addition, I did not consider that it was a practicable or a reasonable procedure on account of the physical situation and of the complications due to power contracts, and litigation.

Mr. KEARNS. Did you enter into this agreement with the Alabama Power Co. partly because you wanted the experience and advice of the members of that company?

Colonel JOYES. No, sir; I would not put it in that way. We wanted their experience and advice in the actual construction work, yes.

Mr. KEARNS. And that is what I mean.

Colonel JOYES. Yes; but we could have hired an engineering firm for that, but it was much more desirable to be done by them, and especially, to be done by them when they were contemplating a future purchase, because that would operate to keep down expenses as much as possible and would cause everything to be done as economically as possible.

Mr. KEARNS. When you first went to Muscle Shoals for the purpose of viewing this as a future nitrate plant, what activities did you find there, Government or otherwise?

Colonel JOYES. There were no Government activities of any consequence. There was a small establishment of the Engineer Corps there handling the navigation canals. That constituted the improvement that there had been for the Muscle Shoals, and that was about all for the Government.

Mr. KEARNS. What private activity?

Colonel JOYES. There were several iron furnaces, several in Sheffield and one or more in Florence, right across the north side of the river. There were minor industries but none of any great consequence other than the iron furnaces.

Mr. KEARNS. Colonel, on the land now occupied by the Muscle Shoals project—

Colonel JOYES (interposing). The nitrate plant No. 2?

Mr. KEARNS. Yes; what activities were there, if any?

Colonel JOYES. Principally farming, cotton raising, mostly.

Mr. KEARNS. How did you get possession of that land?

Colonel JOYES. Well, we walked right on and took it, and a local committee—

Mr. KEARNS. Wait just a minute. When did you take possession of that land?

Colonel JOYES. I got down there about the 19th or 20th of November, I should say.

Mr. KEARNS. 1917.

Colonel JOYES. Yes, sir; and we went right out and looked over the ground and decided just about where the plant would necessarily sit, and about how much area we were going to want, and the Cyanamid Co. was told by me to take possession of it. There was a local association of citizens and a committee. Colonel Worthington, whom you know, was at the head of it. They said they would smooth out all the difficulties, and we essentially took possession of the land we wanted and continued our negotiations with the owners as best we could. The answer as to time, would be the latter part of November, 1917.

Mr. KEARNS. What property does the Government own in partnership or in conjunction with the Alabama Power Co.?

Colonel JOYES. What property does it own in partnership with the Alabama Power Co.?

Mr. KEARNS. Yes.

Colonel JOYES. Absolutely none, sir.

Mr. KEARNS. What properties, then, of the Alabama Power Co. has the Government invested money in—any place, except the Warrior plant and one of the transmission lines?

Colonel JOYES. For every bit of property of any shape or description for which the Government spent a cent the title is vested in the United States absolutely.

Mr. KEARNS. The title is vested in the United States?

Colonel JOYES. Absolutely.

Mr. KEARNS. How much money did the Government invest in properties that were at that time owned by the Alabama Power Co.? How much did you invest?

Colonel JOYES. I do not like that way of putting it I could not answer by agreeing with that language. We did not invest in any property of the Alabama Power Co.

Mr. KEARNS. The Alabama Power Co.—

Colonel JOYES (interposing). I know what you mean and I am only trying to be exact in my answer.

Mr. KEARNS. Then why not answer it?

Colonel JOYES. We put in the neighborhood of a little over \$5,000,000 into equipment and structures, which under the contract are denominated per-

sonalty and temporary, which are located on land belonging to the Alabama Power Co., or land over which the Alabama Power Co. owns an easement. I think that is as good a reply as I can give you on that.

Mr. KEARNS. The real estate title, however, is in the name of the Alabama Power Co. at this time; is it not?

Colonel JOYES. Yes, sir; but we are not claiming any real estate at all. We are in the position of a man who owns an automobile in another man's garage.

Mr. KEARNS. You claim that you have title to those buildings that you constructed—

Colonel JOYES. Absolutely.

Mr. KEARNS (continuing). With United States money?

Colonel JOYES. Absolutely. We have the power company's statement of that, the power company's agreement to the fact that that shall always be regarded as personalty and not subject to any lien they may set up, etc., and so far as it is possible shall be protected against former liens, etc. Furthermore, all property is required to be prominently marked "United States property," and is so marked.

Mr. KEARNS. You had an agreement, or you had a clause in your agreement or contract with the Alabama Power Co. that when you were through with this property you were to sell it to the Alabama Power Co. at a fair value: is that right?

Colonel JOYES. Essentially correct, sir. The language of the contract, of course, will throw certain shades of meaning on that, but that is essentially the meaning of it.

Mr. KEARNS. The contract recites a fair value, does it not?

Colonel JOYES. I do not know. I will have to look it up.

Mr. KEARNS. Well, it does.

Colonel JOYES. I think it does. I think it uses that expression.

Mr. KEARNS. Under the terms of this contract, were the arbitrators to determine what a fair value would be?

Colonel JOYES. Yes, sir. I had better answer those two questions together, right out of the language of the contract, to be sure that there is no misinformation given to you. In the first section of article 22, providing for the sale to or purchase by the contractor, article 1 says, "at the value fixed by arbitration as hereinafter provided." The second section says, "actual cost to the United States of the Warrior extension"; section 3 says, "actual cost of said property"; section 4 says, "actual cost to the United States of the Warrior extension and Warrior substation"; section 5—there was no value stated in section 5, because that was a provision for removal by another than the United States; section 6, no statement as to the value there; section 7 was also a removal proposition, and nothing said about the value until you get down to the last line, which is the alternative, and there it says, "fair value as fixed by arbitration." There it says "fair value."

Mr. KEARNS. That is what I want your construction of. What did you mean by that?

Colonel JOYES. All right, sir; I will get to that in a moment.

Mr. KEARNS. Let us have that question answered here; that is what I want.

Colonel JOYES. All right, sir; I get your point.

Mr. KEARNS. When you were through with this property, the Alabama Power Co. would have the option to buy it, but it must buy it at the fair value.

Colonel JOYES. Yes, sir.

Mr. KEARNS. Fixed by arbitrators.

Colonel JOYES. Yes, sir.

Mr. KEARNS. Now, suppose the arbitrators would fix a value below what the Government thought its interest was worth, would it not have a right to go into the court to construe what was a fair value?

Colonel JOYES. Yes; as to the right to go into court. I have not anything to help you out with on that but my understanding.

Mr. KEARNS. How would you determine then what the fair value would be?

Colonel JOYES. I will tell you what I think the fair value would be, and I think I have something to back that up. It would be somewhat along these lines. The arbitrators would try to decide what would be the cost at the time of the appraisal or arbitration.

Mr. KEARNS. Yes.

Colonel JOYES. What would be the cost under the conditions prevailing then of reproducing the plant in toto as it stood. That would be the fair reproduc-

tion value, as it would be technically called, and the reproduction value would then be subject, under the usual rules of construction, to a deduction to allow for the wear and tear of the plant due to the use which it had already had. In other words, take the present day, for example, we would go out and find out, if we were arbitrating it, what would be the cost of building that plant right now, with present wages and present costs of materials. Suppose it would amount to \$3,000,000. Then we would say, "How long has it been in service," and let us say three or four years, or whatever it might be, and we will say a plant of this nature by the established rules depreciates so much per cent per annum, and suppose we would say 7 or 8 per cent per annum, three times that would be 21 or 24 per cent, and we would lop off 21 or 24 per cent of our \$3,000,000, and then we would have the fair residual value at this time. Now, I think it would also be in order for the arbitrators to consider whether the product the plant was to make was still in demand in the market. In this case, I do not see how they could fail to say that there was a splendid demand for it, and yet in some other cases, for example, steel, if somebody had a steel furnace made on this same set-up, they might very well knock something off of that fair reproduction value because of the fact that the market was so bad. You see my point there.

Mr. KEARNS. Yes.

Colonel JOYES. And I think that is a legitimate rule of procedure. I think it is one that would be followed and there would be ample justification and precedent for it.

Mr. KEARNS. Do you know anything about the Ford offer for this property down there?

Colonel JOYES. I have read it as it appeared in the hearings, sir.

Mr. KEARNS. Is it necessary for Ford to have the Warrior plant, or the property that belongs to the Alabama Power Co., in order to operate his project down there.

Colonel JOYES. I do not so consider it. To develop the full product of the nitrate plant No. 2 as we calculated it and designed it would require more power than is now provided for in the equipment of the power plant at No. 2 nitrate plant, but having that in mind during the construction period, and desiring to have the plant itself as free as possible of any interruption from the outside, and not dependent upon a long transmission line or anything of that kind, and furthermore, because we thought we could make the power cheaper in the one plant at Muscle Shoals if we continued to operate it for any considerable time, we changed the plant of the power house at the No. 2 nitrate plant before it got very far going; that is, in the early part of 1918, and in addition to building it with ample room for the machinery that is now in it; that is, 60,000 kilowatt turbo generators, we left plenty of room there for an additional power unit of 80,000 kilowatts or perhaps more, which would give the plant ample power machinery for all its rated capacity, and we put in three additional boilers also, so that there would be ample steam to take care of that. The plant is liberally boilered for not only the unit that is now in place but for a 30,000 kilowatt unit in addition, I believe. I am not a power expert, but I have heard it discussed by those who are, and they told me that they considered that it was liberally boilered for an ultimate 90,000 kilowatts. Furthermore, there is the water power expected from the Tennessee River.

Mr. KEARNS. Now, there is just one other question, Colonel, I want to ask you, and it is foreign to the questions I have been asking. This may be in the record many times, but I do not recall it. Under the contract that you entered into with the Alabama Power Co., you were to pay 6½ mills per kilowatt hour for power, were you not?

Colonel JOYES. We were; yes, sir.

Mr. KEARNS. How did that compare with the price the Alabama Power Co. was charging its other customers?

Colonel JOYES. I could not give you a comparison at this moment that would be accurate enough to be worth anything, but I am satisfied that it was all right. I think it was cheap compared with their general schedule. It is a very difficult and complex matter to compare those rates, and I can not say at the moment really anything that would be worth while. You see it depends upon the demand, and it depends upon the quantity, etc. When I say the demand, I mean we are flatly and absolutely entitled to 30,000 kilowatts there right along. Now, we may take 5,000, we may take 25,000, and we have no restrictions on that at all. That is a very favorable point for the United States. We can demand up to 30,000 kilowatts any time we want it, and insist upon

having it, but we are not tied up to take any considerable amount. We may take at the rate of 5,000 at this minute and later on in the afternoon we may be taking 25,000. Now, the private customer would pay for that and would pay for it hard. I have seen power contracts, I was looking at three of them the other day and made some notes on them to refresh my recollection, if necessary, and they were contracts where the Government assisted in financing additions to the plants. There was the West Penn, the Duquesne and another company, the name of which I have forgotten.

Their prices were stated and two of them were 7.3 mills and one of them 8 mills per kilowatt hour, but in each of the three cases it was stated that that was the price on a 100 per cent load factor. Now, that means that if the United States has a right to take 30,000 kilowatts it has got to take as much as 30,000 kilowatts or else it pays higher for it, and those contracts stated that if that load factor was not lived up to—if the United States took power at any other load factor, then they would pay such higher rate for the power other than that stated in their contract as the published schedules provided for the reduced load factor. Now, that is the usual practice because, of course, if you have money tied up in a dam, you have got to figure on selling and making contracts to sell power, and if you contract to satisfy people, according to their demands, for all your capacity, you want to sell it. It is perfectly right and proper and it is always recognized. That was the situation. There were some other provisions in our contract as to that rate, and I could not let it pass without telling you of them, while we are about it. That rate was based upon a stated cost for coal of a given quality and was liable to be changed if the coal increased in price a certain amount. Those provisions are all in the contract which you have before you and that was reasonable. Nobody could foresee what the prices were going to be for the next 10 years, and so it was left in that way. The United States has a chance to call for arbitration on that power rate, also, I believe, if the price of coal should go down.

Mr. MILLER. Colonel, you state that the first you ever heard of the Alabama Power Co. was when you returned to Washington and you ascertained that the American Cyanamid Co. was to build a plant for the Government.

Colonel JOYES. Yes, sir; except that I had heard the name.

Mr. MILLER. About when was that?

Colonel JOYES. That was about early in November. I am afraid I heard you rather incorrectly. The first I heard of the Alabama Power Co. in a business way at all was in the early part of November or the end of October.

Mr. MILLER. What year?

Colonel JOYES. 1917; when I first heard them mentioned by the American Cyanamid Co. in its propositions. I had read the name, but I had paid no attention to it before that.

Mr. MILLER. At this time there was no nitrate plant building or under construction, except the nitrate plant authorized by the national defense act of 1916.

Colonel JOYES. No. 1; yes, sir.

Mr. MILLER. It does not say No. 1 or No. 2, but simply nitrate plant.

Colonel JOYES. I understand what you mean; yes, sir; that is correct.

Mr. MILLER. There was \$20,000,000 available for the construction of a nitrate plant and at the disposal of the President under that act?

Colonel JOYES. That was the original appropriation; yes, sir.

Mr. MILLER. That was long prior to our getting into the war?

Colonel JOYES. Yes, sir.

Mr. MILLER. I wish you would state where that \$20,000,000 went—what is went into—that is, the original appropriation under the national defense act.

Colonel JOYES. You will understand I had not complete control of the \$20,000,000.

Mr. MILLER. When you came into possession of the nitrate-production proposition?

Colonel JOYES. I can tell you this in a general way. I think you will find it has already been put in the record of this committee earlier where it was disposed of, and I am sure it is all in the record of Mr. Graham's committee. But in a general way I am right on this knowledge, that in the neighborhood of \$3,000,000 or \$3,500,000 was spent by me in nitrate plant No. 1, near Sheffield; some considerable portion of it, but not much in present-day figures, say, not over a million. I should say, was spent in incidental expenses of investigations here, there, and everywhere by me or my successor in the nitrate division; and about something like \$14,000,000 or so was turned over

to the Engineer Corps for use on the Wilson Dam. That is about all I know at the moment or could say in answer to your question now, sir. That is essentially a broad statement; correct, but broad. Some of it is still unspent now, a little amount.

Mr. MILLER. Nitrate plant No. 1 cost in the vicinity of \$13,000,000—some-where around that sum?

Colonel JOYES. Around that, sir, meaning by that the entire establishment.

Mr. MILLER. That has a power plant connected with it, has it not?

Colonel JOYES. It has a small power plant, about 5,000 kilowatt capacity.

Mr. MILLER. Sufficient to run it?

Colonel JOYES. Sufficient to run it; planned for that. There is no use in qualifying it, conditions as to what would run it successfully were uncertain, but it was designed for that plant specifically.

Mr. MILLER. That was built some time before the plant was constructed?

Colonel JOYES. It was started in the fall of 1917.

Mr. MILLER. I have not very clearly in my mind the necessity of this Warrior extension; that is, the purpose it was to serve.

Colonel JOYES. If I do not hit the point that is bothering you, please let me know.

Mr. MILLER. I will let you know.

Colonel JOYES. The thing is this, in putting up the Muscle Shoals nitrate plant—

Mr. MILLER (interposing). Which one?

Colonel JOYES. No. 2, the only one I call the Muscle Shoals nitrate plant—we were going to have a plant to produce 110,000 tons of ammonium nitrate per year. The contractor said that he estimated or believed that he could build that plant and have it in condition to be producing at one-half its rated capacity in six months from the date of breaking ground. That does not necessarily mean a half-completed plant, but it means it would be working at the rate of one-half of its rated capacity. They said that would require, as best they could estimate it for us at that time, around 30,000 kilowatts, or a little more than that. We now think it would take a little more, but that was about what we were figuring on at that time; and the point was how to get power for that first half production six months after breaking ground for the plant. You could not build a large power plant in that time. We were convinced of that. You have too many things to do; you have the excavation of the ground and you have to make the plans, and all that sort of thing. So we were convinced that Mr. Washburn's suggestion was a very wise one—that we tap into the Alabama Power Co.'s system, where they had already some power, so that by the time our nitrate plant would be ready for its first supply they would be able to give us some power out of their system; and meanwhile, with our addition to their plant they would be prepared to make that supply continuously available to us. So we went down and contracted with them for the power, and put in the addition and the transmission line.

Mr. MILLER. Could you not have built the power plant at nitrate plant No. 2 as quickly as you could build one on the Warrior River?

Colonel JOYES. I have not the slightest doubt, if you started under the same conditions and built the same kind of a plant, that you could do that.

Mr. MILLER. You could have built the plant up there, as you subsequently did build it, just as quickly as you could have built it on the Warrior River and built 88 miles of transmission line?

Colonel JOYES. Provided you had the same kind of plant started under the same conditions. But neither of those provisos was realized.

Mr. MILLER. You say it was Mr. Washburn's suggestion that you go down there and get in connection with the Alabama Power Co.?

Colonel JOYES. That was his suggestion, sir.

Mr. MILLER. And Mr. Washburn is connected with the American Cyanamid Co., you say?

Colonel JOYES. Yes, sir.

Mr. MILLER. And likewise his company, or a subsidiary of his company, had the contract for building nitrate plant No. 2?

Colonel JOYES. Yes, sir.

Mr. MILLER. So you abided by that suggestion and went down on the Warrior River and got into negotiation with the Alabama Power Co.?

Colonel JOYES. Yes, sir.

Mr. MILLER. How many acres of land is there at the power plant, or the Warrior River power plant, owned by the Alabama Power Co., on which this Warrior plant stands?

Colonel JOYES. I do not know.

Mr. MILLER. Approximately?

Colonel JOYES. I should say in all probably they have a thousand acres or so.

Mr. MILLER. And the plant occupies but a small portion of that, I suppose?

Colonel JOYES. That is so. Of course, we spread over and touch upon quite a little piece of it. I might have brought up the plan to show you that, but here was the Alabama Power Co.'s original power plant [illustrating], and we built alongside of it, an addition to it. Then they had an outdoor electrical switching station that set over here [illustrating], and we had to put something onto that. Then we had to build some trackage around there in order to get coal into our extension and to get the ashes out of it, and then there are a number of auxiliary buildings that were about there, and they run up the hill, along in the neighborhood of one of the housing districts that the Alabama Power Co. had provided. Of course, that was the logical thing to do.

Mr. MILLER. It was necessary to repair the railroad to get into it, too, was it not?

Colonel JOYES. Yes, sir.

Mr. MILLER. You went down there and entered into this contract for the construction of the extension to their power house, an extension that was larger than their original power house?

Colonel JOYES. That is correct.

Mr. MILLER. About one-quarter larger?

Colonel JOYES. Yes, sir; about that, I should say.

Mr. MILLER. Their power house had a capacity of generating about 25,000 kilowatts, did it not?

Colonel JOYES. Somewhere in that neighborhood.

Mr. MILLER. And the one the Government erected was capable of generating about 33,000 kilowatts?

Colonel JOYES. Thirty thousand, or about that amount.

Mr. MILLER. Comparing the two plants, if we may so speak of them, the one financed by the Government and constructed by the Government was the larger one of the two?

Colonel JOYES. Yes, sir.

Mr. MILLER. In the first place you entered into a contract at 6 per cent, with a maximum commission of \$225,000?

Colonel JOYES. Yes, sir.

Mr. MILLER. And we paid them \$60,000 to go on their land, in the first place?

Colonel JOYES. We paid them \$60,000, which was defined in the contract as overhead expenses and compensation for the use of the land and facilities, and so forth.

Mr. MILLER. Then we put in, or you say you expected originally to put in about \$2,500,000?

Colonel JOYES. No, sir; I do not think I said that.

Mr. MILLER. Or \$2,250,000?

Colonel JOYES. I mentioned that figure, but I do not think I said that was what we expected to put in. That figure was mentioned in the letter of the Alabama Power Co. as what they had figured they might put in an addition which they had under contemplation, and which they thought would insure a supply of power.

Mr. MILLER. Up to this time had you had any considerable experience in contracts of this character, or business negotiations of this character?

Colonel JOYES. Nothing of this character; I guess nobody had.

Mr. MILLER. Up to this time you were a novice at this kind of work?

Colonel JOYES. Yes, sir; but not in business. I have been doing a good deal of business for the Ordnance Department for a good many years.

Mr. MILLER. I mean things of this character.

Colonel JOYES. Yes, sir; this was quite a novel character of work for everybody.

Mr. MILLER. You say one of the reasons you did this was because you could not see your way clearly to acquire land. What is the sequence of time in which you acquired the land for the construction of nitrate plant No. 2 at Muscle Shoals, as compared to the time you went into this arrangement with the Alabama Power Co. on their land?

Colonel JOYES. We took the land at the nitrate plant, took possession of it, before we had gone into the Alabama power work at all.

Mr. MILLER. You had by some means or other acquired the land on which to build this nitrate plant No. 2 at Muscle Shoals?

Colonel JOYES. Yes, sir.

Mr. MILLER. But you had no means of acquiring the land on which to build this extension?

Colonel JOYES. I do not believe I said that, sir.

Mr. MILLER. I am asking you that.

Colonel JOYES. I mean to say that would be an inaccurate statement; I might have said it. The point is this: I do not mean to say it would have been an altogether, utter impossibility for me to acquire land and take it away from the Alabama Power Co., or buy it from them, provided I had used the money out of the national defense act, which I did not want to do.

And, again, there were other considerations than the actual ability to find a way to buy and pay for the land. There was the question, for one thing, whether, if we made a power house down there, Did we want to own the land? I thought not—wisely or wrongly—I thought not. I think that it was better not to be tied up with the ownership of land. And, then again, we had other things than the land to buy there. It was a question of the facilities which they had built underground, and various other things, more or less tangible, and some of them intangible, that all tied in together and gave us what we wanted there—the ability to get quickly additional facilities for producing power.

Now, another thing: There was on the transmission line a great deal of work involved to get the right of way. There were a great many ownerships and if the Government had gone down there we would have had to go ahead and dicker with the people, many people through that country, a country that was unfamiliar to us. The power company's people knew the country, they had worked through it before, and they had certain powers under the State laws to commandeer it and could get the right of way with very little trouble, and they knew how to do it, and they could get it cheap whereas it would have cost us a great deal. We would have had to build up an organization in order to do it, and we would have had some trouble about it. I do not say that is a vital reason, because trouble was a thing we did expect to take; but we had to think about what the possibilities were for timely accomplishment, and we had to give that a certain weight; that is, whether we could actually physically accomplish the job within the proper time or not.

Mr. MILLER. You contracted with the Alabama Power Co. as the agents of the United States Government to do these things, did you not?

Colonel JOYES. I did not know that we made that an agency contract; I had forgotten that, if we did. I believe we simply employed them as the contractor to build it.

Mr. MILLER. I think you will find it the way I stated.

Colonel JOYES. It may be it is an agency contract and I may be wrong. We called them contractors in the contract, I think. Are you not thinking of the Air Nitrates Corporation contract? They are agents. These people are not agents and never were; they were simply contractors. I do not think you will find the word agent in there.

Mr. MILLER. Let me refresh your memory a little bit on that.

Colonel JOYES. It may be they are and I may be wrong about it.

Mr. MILLER. Turn to article 2 of the contract.

Colonel JOYES. Article 2?

Mr. MILLER. Yes. It says: "Upon the approval of the contracting officer of said plans and specifications for the Warrior extension and the Warrior substation or any part thereof, the contractor shall as the agent for and at the expense of the United States"—

Colonel JOYES (interposing). Where is that paragraph?

Mr. MILLER. That is in article 2.

Colonel JOYES. "New facilities at Warrior station."

Mr. MILLER. Yes; the last paragraph of that article.

Colonel JOYES. I see; you are right and I am wrong about that.

Mr. MILLER. Let me call your attention to the next paragraph, article 3, which says: "The contractor shall, subject to the approval of the contracting officer, but at the sole expense of the contractor." There is a vast difference between those two.

Colonel JOYES. Yes, sir.

Mr. MILLER. Let me proceed farther in section 3, at the top of page 148 of the printed hearing, where it says, "upon the approval by the contracting officer of the said plans and specifications or any part thereof, the contractor shall as

"the agent and at the expense of the United States furnish all the labor, material, tools, machinery, equipment, facilities, and supplies, and do all things necessary to clear so much of said right of way," etc.

Colonel JOYES. My memory is at fault, unquestionably. I had not remembered that there was a definition of the word "agent" in the whole contract.

Mr. MILLER. Let me refer you also to paragraph 3 of the same article. There it says, "Upon the approval by the contracting officer of such plans and specifications the contractor shall, as the agent for and at the expense of the United States, likewise construct the quarry main line on a right of way to be provided by and at the expense of the United States."

Now, everything down there, Colonel JOYES, in connection with the Warrior steam plant was on the property of the Alabama Power Co., either what it then had or what was subsequently acquired.

Colonel JOYES. Everything denominated, everything covered by the term "Warrior extension, and Warrior substation and the transmission line," because that was on their easement; but not the Muscle Shoals substation.

Mr. MILLER. No.

Colonel JOYES. That was the only exception.

Mr. MILLER. That was on our own land.

Colonel JOYES. That was on our own land, sir.

Mr. MILLER. I wonder why that was.

Colonel JOYES. That was at the Muscle Shoals end of the line. One of the substations was at the place where the power was produced and stepped up in its voltage, so it could travel along the line—like an elevator carrying the voltage up. Then, at the other end there had to be another elevator to carry it down, or step it down, and that was on our property.

Mr. MILLER. The first was on the property of the Alabama Power Co. and the other was on the property of the United States?

Colonel JOYES. Yes; those are transformer stations where the voltage of the current was stepped up so as to travel along the line for a long distance.

Mr. MILLER. Yes; I understand all that. Do you think that was a good business proposition?

Colonel JOYES. I think so; as good as could be expected under the circumstances of the war. It was a good contract for the war period, and compared favorably with any other.

Mr. MILLER. That was your first contract; you had never had any experience in such matters before?

Colonel JOYES. I am quite ready to admit that, but I think it was doing pretty well for the first time, however that may be.

Mr. MILLER. We may have our differences of opinion on that.

Colonel JOYES. Yes.

Mr. MILLER. I am the person who said it was an unconscionable contract.

Colonel JOYES. Very well, sir. I consider it a good one.

Mr. MILLER. So we may frankly understand each other.

Colonel JOYES. Very well, sir.

Mr. MILLER. We were going to buy this product, we put in \$5,000,000, or approximately \$5,000,000, and were to buy the electricity from them at a price of 6½ mills per kilowatt hour.

Colonel JOYES. Quite right, sir.

Mr. MILLER. Approximately what was the company charging other customers, so far as you know?

Colonel JOYES. I could not give you any information on that at the present moment. I have been separated from the business too long to remember it.

Mr. MILLER. You can see the deep significance of that, can you not?

Colonel JOYES. See what?

Mr. MILLER. We were simply buying electricity down there.

Colonel JOYES. Not quite that.

Mr. MILLER. What were we doing?

Colonel JOYES. Because you have other provisions in that contract, in this way. We built the plant; yes. But did we give them the free use of it? No; they rented it from us. They paid us back, or were, under the contract, to pay us back if the contract had been operative, for the supply of power; if we had not stopped, they were to pay us interest at 6 per cent per annum upon the total cost of what we had spent down there—not any estimated reduced value, but our actual expenses. They were to pay 6 per cent per annum on that. You will find that fully set down in the contract; and if you will turn to it, you will find it in article 17, "Payments by contractor."

Mr. MILLER. Now, then, that 6 per cent proposition was only payable so long as the Alabama Power Co. furnished power for those nitrate plants.

Colonel JOYES. Absolutely not both, sir; there is no mention of both nitrate plants in that connection, bearing that significance, and inevitably having that meaning. It says, "so long as the United States shall require the contractor to supply energy to the United States for the operation of either or both of said nitrate plants"; that is a different thing. It goes on, "the contractor shall pay to the United States monthly for the use of the Warrior extension and Warrior substation interest at the rate of 6 per cent per annum upon the actual cost to the United States of said extension and substation." That is the essence of that.

Then, paragraph 2 of the same article says, "during such period as the contractor may, under the provisions of article 21, be relieved of said monthly payments the contractor shall pay to the United States monthly, in lieu of said monthly payments, one and one-half mills for each kilowatt-hour of energy produced by the contractor at the Warrior extension." Furthermore, when we were taking power from the contractor at more than \$30,000 worth per month we were to receive from the contractor two mills toward the purchase price. There you have payments consisting of interest on the actual cost of the investment, and also an amortization payment; and also, the tenant, so to speak, was to attend to all the upkeep and insurance. So that essentially put them in the position of a tenant who rents from you something that you own at a fair rental for it and is therefore entitled to sell you the product of that plant just as if he owned the plant. I do not think there is any other construction to be put upon it.

Mr. MILLER. Let me read some portions of section 17. It says, "beginning at the termination of the period of the preliminary operation mentioned in article 14, and so long as the United States shall require the contractor to supply energy to the United States for the operation of either or both"—

Colonel JOYES (interposing). Either or both.

Mr. MILLER (continuing). "Of said nitrate plants, the contractor shall pay to the United States monthly for the use of the Warrior extension and Warrior substation interest at the rate of 6 per cent per annum upon the actual cost to the United States of said extension and substation." Do you mean to say that a limitation of that kind does not apply only to the period when they shall furnish power for one or both of those stations?

Colonel JOYES. I never said that.

Mr. MILLER. That is what I said.

Colonel JOYES. You said there was a limitation on there when they were to furnish power for the operation of both nitrate plants.

Mr. MILLER. Both or one of them. I said both where I should have said both or one of them.

Colonel JOYES. I have to look out what the meaning of my reply is, so that I will not be misunderstood. Let us take the language of the contract.

Mr. MILLER. We understand each other. You need not be afraid of that. I am asking you if under that contract the \$30,000 a month is only payable during the period when we are furnished power for one or both of those plants?

Colonel JOYES. The \$30,000 per month, which is the minimum payment which we undertake to make, is only payable when we are exercising our demand for power, and that demand may be exercised in several ways, and without remembering the exact language, I am sure the contract carries this meaning, that whatever use the United States may make of the power which it chooses to set up a demand for under this contract that would be the ruling, we would pay the \$30,000 and we would get our rental back from the company. I qualify it that way, sir, because there is a provision here which we may pass over. If we wish, the right to set up a demand for that power to some other party. It was set forth in the beginning that the fundamental purpose for supplying the power was for the operation of nitrate No. 2, and naturally we had that in our minds. Whether the contracts says so or not. I think it would be quite probable that it did have some limitations to the uses of the nitrate plant, because—

Mr. MILLER (interposing). No doubt.

Colonel JOYES. No doubt—because that was what we had in our minds; and moreover, it might well have determined the terms of the contract on account of the nature of the demand which determines the cost of the power.

Mr. MILLER. I have been wondering why this was done, all of this elaborate arrangement with the Alabama Power Co., when we already had a steam power plant at plant No. 1, and we were building one at nitrate plant No. 2.

Colonel JOYES. Yes, but there is a difference between different kinds of power plants, and I will analyze them for you if you wish.

The power plant at No. 1 was a very special kind of power plant. The process required comparatively little power, it required a great deal of steam. The plant put in at No. 1 was built to make a good deal of steam and supply it, and it was a good steam plant. Now, we put in some electrical generating machinery; but it was of a kind that, whether it was wise or not to put it in that plant; and that has been questioned, and I have questioned it myself, but it is certainly not the type of machinery that would be put in for any power-producing concern. It is direct current machinery, for one thing. There is some alternating current machinery; but it is adapted for the particular needs of that plant. That is the situation there.

It was a small plant; it was not capable of expansion under advantageous circumstances at all. It was far removed from the coal mines. We had no advantage there. On the other hand we did not have the advantage of being immediately adjacent of the place where it was going to be used. It was 5 miles from plant No. 2. It was expected that that local power plant would generally always be required to serve nitrate plant No. 1. This Alabama power was specifically intended always for nitrate plant No. 2; but if we had need for it, we had the right to use it elsewhere.

Mr. MILLER. Here was a steam plant and a large generating plant. Why was the steam plant and the big electric installment not made at plant No. 2. Why were they not all kept down there?

Colonel JOYES. They were not put there at nitrate plant No. 2 because they had a start at the Warrior, and we could get it quicker in the way we did it. We were not dependent upon the completion of the Warrior extension steam plant for our first power supply from the Alabama company, nor did it turn out that way in the end. We got power from the Alabama Power Co. as soon as the transmission line was finished; in fact, before the permanent transformers were installed. We took some at low voltage for construction work, and immediately the transformers were in we had some available to run our plant. We therefore actually, as a matter of fact, had power under that contract from the Alabama Power Co. before the Warrior extension was finished. The situation was this: We tapped a system which at certain periods had an available power, and to protect our supply we had this additional Warrior extension, and the whole thing worked out as planned, so that by the time we needed power we had it to use. The reason we could put in the Warrior extension at Gorgas to do that was simply because they had a start there, and that is why it looked good to us. It was more a question of time than money, the time which would have been consumed in going down 25 or 80 feet into rock and getting a water conduit for the condensing water, and all of that sort of thing. That was all done, and it saved quite a bit of time in that work.

Mr. MILLER. By the time 30,000 or 33,000 kilowatts were to be delivered at the Muscle Shoals plant No. 2 how far along was the steam plant there at plant No. 2?

Colonel JOYES. It is rather hard to coordinate, but its main structure as a building was very far from completed. I think the outside brick walls were not up by any means. Some of the boilers were being set at that time. I think the best thing I can say to you is that it was very, very far from being completed. If we could show you the progress photographs that would be an accurate reply to your question.

Mr. MILLER. Let us take another angle of it. At the time you got 30,000 kilowatts from the Warrior plant was nitrate plant No. 2 ready for half production?

Colonel JOYES. The times are difficult to coordinate from memory. We really had our first running of the nitrate plant, the actual product coming through in October. I should say the middle of October, about, speaking from memory; that is, October, 1918.

Mr. MILLER. I am asking this question to get the sequence; that is, whether at the time the 30,000 kilowatts were delivered at nitrate plant No. 2, was the plant ready for half production? What is your memory on that?

Colonel JOYES. I should say they were just about even. Probably the availability of the power from the Alabama Power Co.'s system was earlier than the readiness of the nitrate plant to use it.

Mr. MILLER. How did the completion of the plant ready for half production compare with the completion of the steam plant at nitrate plant No. 2?

Colonel JOYES. The nitrate plant was ready for half production considerably before the power plant at No. 2 was ready.

Mr. MILLER. You mean for half production?

Colonel JOYES. Very long before, because that complicated unit, the turbo-generating unit, gave us trouble and parts of it had to be sent back to the manufacturer, and it took many months to get them back. Of course, if the war had continued it might have been hurried up some. I have not really refreshed my memory on those dates. I have been disconnected from this work for nearly two years, certainly a year and a half, and I do not want to be taken as making a definite statement about these comparative things. They can all be verified absolutely for you if you desire.

Mr. MILLER. Now let me get down to the famous paragraph 23 of the Alabama Power Co. contract, which I believe, you said worked no hardship to the United States Government.

Colonel JOYES. Yes, sir.

Mr. MILLER. Article 22 has several alternatives in it. The first of them is that the Alabama Power Co. shall have the right to purchase the property at its fair value.

Colonel JOYES. That is the first one?

Mr. MILLER. That is one of them.

Colonel JOYES. I do not think that is No. 1. No. 1 is the option of the United States.

Mr. MILLER. It says "at any time subsequent to three years after the termination of the war"; why was that put in there, "three years after the termination of the war," and then the termination of the war was to begin at the time we formally declared peace?

Colonel JOYES. Yes, sir.

Mr. MILLER. At whose suggestion was that put in, yours or the Alabama Power Co.?

Colonel JOYES. I do not know, sir. Frankly, I can not recall that.

Mr. MILLER. Subsequently, there is another paragraph by which that period can be extended two and one-half years.

Colonel JOYES. That period of three years extended two and one-half years? I do not know what you mean there.

Mr. MILLER. Yes; I think so.

Colonel JOYES. For payment?

Mr. MILLER. Payment, I believe, to be expended.

Colonel JOYES. Oh, yes.

Mr. MILLER. That is the red-hot part about buying anything.

Colonel JOYES. Yes; but you do not expect to sell a three or four million dollar property and get cash across the table.

Mr. MILLER. No; but within three years after the war came to a close certain rights accrued under article 22.

Colonel JOYES. Yes, sir; I think it comes back to me a little bit now. I can give you a surmise of the reason for that. I think it was figured that that was put in to give a chance for some little stabilization of conditions following from the war, as being a fair thing. I believe that is, essentially, the reason for it.

Mr. MILLER. Yes; and we must keep in mind also and under our eye the condition under which this \$5,000,000 was put in: it was put in at a time when the War Finance Corporation would allow very few, if any, enterprises to borrow money and issue negotiable securities, etc.

Colonel JOYES. I am aware of that. At times they were giving priority to increases in power plants.

Mr. MILLER. Oh, yes; in some places.

Colonel JOYES. We had A-1 on most of ours.

Mr. MILLER. That paragraph gives the Alabama Power Co. the right to acquire this property under certain conditions, and the value of it was to be arrived at under arbitration provided for in the contract, and the payment for it.

Colonel JOYES. Yes.

Mr. MILLER. The term "fair value" has a very deep significance, Colonel. I do not know whether the technical use of it was considered when that term "fair value" was put in there.

Colonel JOYES. That was undoubtedly considered at the time.

Mr. MILLER. Anyway, that "fair value," in your judgment, was to be the fair value as a going concern, as a part of the unit of the Alabama Power Co.

Colonel JOYES. That was fair value as a going concern.

Mr. MILLER. As a part of the unit of the Alabama Power Co., or part of its generating plant.

Colonel JOYES. Yes; I think that would be a fair meaning to read into it. Whether I would be upheld in that, I do not know, but I think that is fair. It acquires a certain additional value, I think, by reason of its being tied in with the general system, and I think we will get that when it comes to the manner of settlement.

Mr. MILLER. You realize, as the world realizes, that this Warrior extension is of greater value to the Alabama Power Co. than to any other person in the world.

Colonel JOYES. Precisely.

Mr. MILLER. It was able to fit it in with its system so that it would become a part of it?

Colonel JOYES. Absolutely; and therefore I believed that in making the best possible arrangement in the contract that we could for them to buy it from us we were making a considerable advance toward the best possible disposition that could be made of it.

Mr. MILLER. Why did you not write into the contract that the price to be paid by the Alabama Power Co. was to be the fair and reasonable price as a going concern, as a part of the Alabama Power Co.'s system?

Colonel JOYES. We might have added a number of your suggestions to the contract, but we did not do it. You were not there to help us.

Mr. MILLER. You had a number of able lawyers.

Colonel JOYES. We would have taken any help we could get; we were crying for help.

Mr. MILLER. There is a vast difference in law, Colonel, between a fair price and a fair price as a going concern and part of the property of another man.

Colonel JOYES. I know it, but let us take the facts. I am not a lawyer, but I will show you some other things that have been done that I think will show you how those things have worked out. Take, for instance, the case of the Utilities Construction Co., in Lorain County, Ohio. In October, 1918, that company had a power plant there on which they had spent about \$600,000. The United States contracted to pay about 40 per cent of the remaining cost, and the company was to pay the other 60 per cent. The United States contracted to buy 200,000,000 kilowatt-hours at 8 mills. The United States actually spent on that contract \$500,000 and got back \$300,000, on precisely the same kind of a set-up as we have here. We went into the Duquesne plant and spent \$578,000 and got out of that \$300,000 back. That was on the same kind of a proposition as this one. The West Penn Power Co. contracted for 1,700,000,000 kilowatt-hours at 7 mills and a little over, and we were to spend about \$2,000,000 there and pay not over 40 per cent of the cost of the building and plant. We were to put \$2,000,000 in the bank and let them draw as they saw fit. We actually had to put up more money. We spent \$2,409,000 on that property, and in the final settlement of it we got out \$1,204,500, which was 50 per cent of what we put in, and all of those people had similar expressions in the contract, not the identical wording, by any means.

Mr. MILLER. On some of those you did not come out as good as that.

Colonel JOYES. That is quite right, sir. Those are where we had those investments in power plants, but I have also some data relative to coke plants. I was simply showing to you the precedents we had. I think we have some precedents as to what constitutes "fair value" in the settlement of such Government contracts.

Mr. MILLER. This was the pioneer contract, was it not? The others were gotten up subsequent to this one, were they not?

Colonel JOYES. Some of them subsequent and some of them prior. I think all of them were signed prior to the actual date of the signing of ours.

Mr. MILLER. But the laying of the foundation—

Col. JOYES (Interposing). When you go into arbitration I think you would be entitled to show some of those settlements in order to show what we could get on this contract.

Mr. MILLER. There is another provision to the effect that if they did not buy it, according to arbitration, we were to have the privilege of selling to somebody else, provided the other fellow could not run it.

Colonel JOYES. We had the privilege of doing what we originally agreed to—get off their land and move out of the house we had rented.

Mr. MILLER. That meant scrapping the plant?

Colonel JOYES. Essentially scrapping the plant—giving up the land which we had taken on lease.

Mr. MILLER. That was the point where the Government was at a disadvantage in not having the plant on its own property, Colonel; that is the great disadvantage.

Colonel JOYES. The proof of the pudding is in the eating, and when you come to make a settlement you will find you will get your money back.

Mr. MILLER. Have you anything in mind to the effect that you would get all your money back?

Colonel JOYES. Not all; but, if you will get a fair return, you are doing all that can be expected. If we had decided to build a power plant of our own, we could have done it. We did it at Muscle Shoals. That power plant is built on our own property, and we spent about \$12,000,000 on it, but I understand the best thing we have got in sight for it now is an offer of \$5,000,000 for that and a lot of other things thrown in, which cost us \$80,000,000 or so. That does not look much better than the Alabama Power Co. proposition, does it? On the Alabama Power Co. proposition, if we do not get back 60 per cent of the money we put in there, I will miss my guess; I would be willing to wager something on it right now.

Mr. MILLER. You are figuring on the Warrior steam-plant extension as a temporary affair?

Colonel JOYES. Certainly.

Mr. MILLER. Were you figuring nitrate plant No. 2 as a temporary affair? That is permanent, is it not?

Colonel JOYES. That is permanent; yes.

Mr. MILLER. One is permanent and the other is temporary.

Colonel JOYES. What I am talking about is what you are going to get out of this, or out of both places. You put in in the Warrior extension, etc., some \$4,000,000 and you will get out of it \$3,000,000, probably, if you treat it as a business proposition. But take this proposition at Muscle Shoals right now; it cost \$12,000,000 or \$13,000,000, and if you want to treat that as a business proposition, and if the business comes along for it, you can do something with it; but the best thing in sight now is an offer of about \$5,000,000 for it, and everything else in the bargain. The reason you have not got anything better in sight as an offer for the Muscle Shoals steam power plant is that it is not tied into any producing and marketing concern. The reason you have a good outlook for the \$4,000,000 we threw into the Warrior plant, if you want to put it that way, is that we are tied into a going concern and we have a perfectly plausible and good customer to buy it, and we are tied up to him in the best possible way to get good money for it.

Mr. MILLER. That is your idea of it.

Colonel JOYES. That is my idea; yes.

Mr. MILLER. That you could dispose of that power plant hooked in with the Alabama Power Co., where the Alabama Power Co. can be the only possible purchaser, and you think that is a better proposition than if it was a separate and distinct plant.

Colonel JOYES. Very much better.

Mr. MILLER. You consider that nitrate plant No. 1 was built out of the fund provided in the national defense act?

Colonel JOYES. It was; yes, sir.

Mr. MILLER. And nitrate plant No. 2 was built out of other funds, not out of the national defense act funds?

Colonel JOYES. Yes, sir.

Mr. MILLER. You spoke about the President setting aside \$200,000, and then you said there was a subsequent allotment of \$150,000 for the purchase of land.

Colonel JOYES. Yes, sir.

Mr. MILLER. You did not use it.

Colonel JOYES. I did not use it for that purpose.

Mr. MILLER. Why did you not?

Colonel JOYES. I turned it back, and it was diverted or allotted to me or somebody else for other purposes.

Mr. MILLER. Was not one of the purposes in turning it back so that there would be no color of claim that the nitrate plant No. 2 in anywise was affected by the national defense act?

Colonel JOYES. Precisely, that is my reason absolutely.

Mr. MILLER. And then when you could get out from under the national defense act you could make this sort of arrangement if you wanted to, so far as it related to nitrate plant No. 2, in conjunction with the offers of a

private concern, which you could not do with nitrate plant No. 1, which you could not do if you bought the land with money provided under the national defense act.

Colonel JOYES. We had no specific legal bar against working in conjunction with a private corporation.

Mr. MILLER. Your whole theory, then, of your being authorized to entwine this Warrior steam plant in with the properties of the Alabama Power Co. as a part of their system is because it applies exclusively to nitrate plant No. 2?

Colonel JOYES. Oh, no; not at all.

Mr. MILLER. Then I have misunderstood you.

Colonel JOYES. I think you have, sir.

Mr. MILLER. I understood you fully. So without nitrate plant No. 2—

Colonel JOYES (interposing). The point is this as to the Alabama Power Co. We built those facilities, the transmission lines, and the Warrior extension, absolutely and specifically for the purpose of securing ourselves power to operate the first half production of nitrate plant No. 2 by the time it was ready, and we did it. Now, having done that, and having provided those facilities, we wanted, through our contract, to have as broad use of the power provided in that way as possible, and we therefore wrote such provisions in the contract as appear in that way.

Mr. MILLER. That the warrior extension was a part of the facilities of nitrate plant No. 2, a part of it?

Colonel JOYES. I do not think we ever said that, did we?

Mr. MILLER. That is what it was designed for, and what you went in for, to drive the first unit through.

Colonel JOYES. No, sir; we said—"I do not recall anything that put that aspect upon it; it was to give us the power upon it; that was all." We were fixing it up for another sort of power, ultimately, for all these needs at nitrate plant No. 2. It was a temporary expedient, which might be used for greater or less time, and which we would hope to use as little as possible, because we hoped to make power cheaper at the bigger plant at Muscle Shoals, and, of course, in the future whatever uses might come for the nitrate plants in the future we hoped to get something out of the water power.

Mr. MILLER. Perhaps I did not make myself plain. If the warrior steam plant had been designed as a part of nitrate plant No. 1 you could not have gone into the arrangement with the Alabama Power Co. which you did go into, could you?

Colonel JOYES. I think there would have been some doubt about it.

Mr. MILLER. But when you went into it along with nitrate plant No. 2 and hooked it up with the warrior extension, that is, hooked up the warrior extension with nitrate plant No. 2, the limitation in section 124 of the national defense act did not apply, as you considered it?

Colonel JOYES. I did not think that applied; no, sir.

Mr. MILLER. That is just the difference then.

Colonel JOYES. My point about that is this, that I take it the contract for the power with the Alabama Power Co. was an independent proposition, independent really of plant No. 2, for that matter, because it was a separate contract for power. It stated the purpose for which we expected to use the power, and that determined the character of the demand and the place where it was to go and so forth. I took it it was an independent proposition. I may be wrong about that.

Mr. MILLER. If nitrate plant No. 2 had no reference to the national defense act why did you locate it at Muscle Shoals?

Colonel JOYES. Because it was the best place it could be put. When we were putting it there we were not affected by, and did not take into consideration the national defense act, except that it might give it in the future a little further value, by giving a cheap water power nearby, and we took into consideration a lot of other factors. As I have said before in other hearings the location down there is very good in a number of ways. We have a good place down there, a level place accessible to the river, where you can get good cooling water for the power station and have the great mass of water that must go through the processes of the plant.

Then it has access to a most wonderful deposit of limestone of the very particular specification required for that process. Then, it is fairly near a good supply of coking coal. The limestone proposition is one of the biggest things in the whole problem. They figured that we would have to quarry about 2,000

tons of stone a day. The actual needs of the plant would call for about 1,200 tons. There is always a waste in quarrying in the matter of dust and things of that kind, and we expect to have to quarry about 2,000 tons a day in order to keep the plant going to capacity. That is some stone, and you do not want to haul it very far. We found a quarry where there was a perfectly good 50-foot bed, which had been analyzed and found to contain 98 per cent calcium carbonate. Most limestone has a lot of magnesia in it and is unfit for this particular development. We went around and hunted until we found a good class of stone.

Mr. MILLER. So that was just the place to put the plant—at Muscle Shoals—it was an advantageous place?

Colonel JOYES. Oh, yes; it was advantageous in many ways.

Mr. MILLER. Why did you not put plants 3 and 4 there, which you placed at Cincinnati and Toledo, if this location had so many advantages?

Colonel JOYES. This location was getting sort of clogged up—when you get so much in there, you can not get any more—and, then, the railroads had limitations. The railroads could only handle so much. There are railroads running in there—the main line of the Southern and the main line of Louisville and Nashville—and there is a little branch running toward Birmingham, operated by the Southern Railway. They could handle the materials for plant No. 2, and that was just about their capacity business.

Mr. MILLER. I see we have 2,200 acres of land there.

Colonel JOYES. The reason for that location of these two plants at Toledo and Cincinnati was the power question, the same thing we were up against—the same proposition in relation to power. We had to get power, and we had to get it by a certain time. So we went to going concerns and we did precisely what we did here in this “unconscionable” contract. We repeated it over again, only worse. We started to do the same thing by building absolute extensions on people's property at Toledo and Cincinnati, and we would do it again under like circumstances.

Mr. PARKER. Colonel Joyes, without going into the exact dates, I understand that transmission line was operating and giving power before anything else was in operation.

Colonel JOYES. That is correct, unquestionably.

Mr. PARKER. The Warrior plant extension was next to operate in giving power. What was the next thing?

Colonel JOYES. What was the next thing?

Mr. PARKER. The Warrior extension steam plant?

Colonel JOYES. The Warrior extension steam plant was operating long before the Muscle Shoals steam plant.

Mr. PARKER. How about nitrate plant No. 2? Was the nitrate plant No. 2 ready for operation before or after the Warrior steam plant extension was operating?

Colonel JOYES. I hesitate a little on those exact dates, because I have this in mind—

Mr. PARKER (interposing). I do not want to press you on that.

Colonel JOYES. The Warrior extension was finished and started on a test run, and after running a certain time it was taken down and certain alterations made. There was no definite break of the turbine, but there was an interruption. I could get you that date more exactly.

Mr. PARKER. I will ask you to state the exact date when the transmission line came into operation, giving the power; when the Warrior extension came into operation and gave power over that line; third, when the nitrate plant No. 2 was completed and ready for operation; and, fourth, when the Muscle Shoals steam plant was complete and ready for operation. You will put those on the record.

Col. JOYES. Yes, sir; we will get you the exact dates of all that, sir.
(Subsequently Colonel Joyes submitted the following:)

CHRONOLOGY.

November 13, 1917: American Cyanamid Co. proposal to build United States nitrate plant No. 2 submitted and accepted by Chief of Ordnance.

November 16, 1917: Above ratified by War Industries Board.

November 6, 1917: Date of Alabama Power Co. proposal.

December 7, 1917: Original purchase orders Ex. orders T-154, T-155, and T-156 drawn by Colonel Joyes on Alabama Power Co. to build transmission line, to build Warrior extension, and to furnish electric energy, respectively.

December 21, 1917: War Industries Board ratified broad lines of this undertaking with Alabama Power Co.

December 21, 1917: Order additional to XOT-154 transmission line, to cover transformer station ("substations").

January 8, 1918: Orders revising XOT-155 (Warrior extension) and XOT-156 (supply of energy).

May 23, 1918: Transmission line ready for operation; and power (at low voltage) available.

June 24, 1918: Alabama Power Co. ready to deliver power to U. S. N. P. No. 2 at 44,000 volts.

July 1, 1918: U. S. N. P. No. 2 commenced use of energy from Alabama Power Co., over transmission line (for construction and preliminary work).

October 21, 1918: Transmission line voltage raised from 44,000 to 110,000 volts.

October 26, 1918: First operation of apparatus (electric carbide furnace) in actual nitrate production at U. S. N. P. No. 2 (same power previously used in preliminary operation of certain plant apparatus).

N. B.—At this time U. S. N. P. No. 2 could not be said to be fully ready to enter into 50 per cent capacity production, but would probably have been ready for successively increasing up to that capacity as rapidly as such work should be increased in a new plant, which rapid progressive increase was actually prevented by the armistice, November 11, 1918.

November 12, 1918: "Deflection tests" upon the installed turbogenerator in Warrior extension made. Thereafter, on account of armistice, work proceeded more deliberately than it had previously.

December 29, 1918: Turbine in Warrior extension operated seven and one-half hours with power load.

January 4, 1919: Preliminary test operation Warrior extension terminated.

January 11 to February 1, 1918: Operated Warrior extension, supplying power for the one-fifth capacity test of U. S. nitrate plant No. 2, all departments.

December, 1917: Design commenced for steam power station, U. S. N. P. No. 2.

January, 1918: Construction commenced for same and pushed to utmost until armistice.

August, 1919: Steam power station U. S. N. P. No. 2 ready for full operating test. Could undoubtedly have been ready earlier but for slowing up, for economy, after armistice, November 11, 1918.

September 10 to October 30, 1919: Test run developing troubles in turbine of the U. S. N. P. No. 2 steam power plant, which necessitated returning two of the three rotors to Pittsburgh for repair and modification by builder.

October, 1920: Retest of steam power plant U. S. N. P. No. 2 carried out successfully.

October 30, 1919: Last of construction force removed from U. S. N. P. No. 2, some time previous to which the nitrate plant proper had been completed and put into condition for preservation idle.

Mr. PARKER. You said in answer to a question that you could build the Muscle Shoals steam plant as quickly as the Warrior steam plant, with the same plant and conditions.

Colonel JOYES. With the same plant and starting conditions; yes, sir.

Mr. PARKER. But you were going to say something as to whether you had the same plant.

Colonel JOYES. They did not have the same plant, or the same scale, nor the same starting condition.

Mr. PARKER. What difference was there?

Colonel JOYES. In the first place, the scale was different. The Warrior extension was a 30,000-kilowatt plant, and the Muscle Shoals plant was a 60,000-kilowatt plant. The Warrior extension was, so to speak, cheaper and a less efficient type, that is, it was not planned for such extreme efficiency for cheap operation and cheap production of power as the nitrate plant No. 2 station. It did not have such elaborate electric controls, and there were several things of that kind. The differences of conditions were these: At the

Warrior plant there was a site all ready and it had all the underground work all ready for carrying the water for the condensers in ample volume, and that saved us a great deal of rock excavating and concrete work; and certain foundations were in; the ground had all been thoroughly explored; the actual construction plans had been drawn by the Alabama Power Co. with a view to using them to build. They had dock facilities there so they could run a lighter up and run a railroad car ashore from it. They had the possibilities of greatly improving that station by the fixing up of that railroad, and in the meanwhile they could handle all of their heavy freight by lighter down from a nearby station on the river. They had an organization all built up, and they had just about completed a construction job for themselves and were ready to take on a new one. They had engineers who knew the country thoroughly. Those are the principal things. It is easy to see that when we got those things we would save a great deal of time.

Mr. PARKER. That is why you expected quicker work there than you could get at Muscle Shoals?

Colonel JOYES. Yes, sir.

Mr. PARKER. And your answer to that question, I think, already given will show how much quicker it worked out after all.

Colonel JOYES. Yes, sir; we had a tremendous amount of rock excavation to do at Muscle Shoals.

Mr. PARKER. That is true; and the proof of the pudding is in the eating, and we will see whether you did get it earlier, from your answer to my questions awhile ago.

Colonel JOYES. Yes, sir.

Mr. PARKER. Meanwhile, beyond all that, by getting through the Warrior steam plant extension you had the opportunity of getting power the moment the transmission line was completed, which was comparatively a very small matter.

Colonel JOYES. Perhaps I misunderstood just what you mean.

Mr. PARKER. It was a comparatively small matter, was it not?

Colonel JOYES. We had actually a certain amount of power as soon as the transmission line was open.

Mr. PARKER. I say the building of the transmission line was comparatively a small matter.

Colonel JOYES. Yes, sir; it was.

Mr. CROWTHER. When you found the law was not sufficient for you down there, or that you were handicapped, why did you not try to get some legislation? It would not have taken very long; it could have been gotten in a very few days could it not?

Colonel JOYES. As to getting land, etc.?

Mr. CROWTHER. Yes.

Colonel JOYES. I think I mentioned that when my attention was called to that act of July 2, 1917, as soon as I realized what it was, I went in and saw General Crozier, in August, 1917, and gave him a memorandum, and I believe that is still in the files. I called his attention to the fact that it did not do the Ordnance Department any good in its work, that we ought to try to get an improvement in the situation, and he told me he already had it up at that time, and I think he went at that pretty promptly, and the act went through and was approved on April 11, 1918.

Mr. CROWTHER. Nearly a year after?

Colonel JOYES. The better part of a year. How long he had been working on it I do not know; I would not like to say to you. I am sure I went to General Crozier in August of 1917, and he told me he had it already in hand. You can tell from your own records about that. There was a bill introduced, which was amended and resulted finally in the act of April 11, 1918. I do not know just what time it was introduced, but I am sure it was early in the session. It went along and ultimately was enacted.

Mr. CROWTHER. He did not follow up that legislation with the pertinacity and pugnaciousness with which most legislation is followed in the House.

Colonel JOYES. Probably not.

Mr. CROWTHER. I wonder why? From whom did you buy the land for nitrate plant No. 1? Did the Alabama Power Co. own any of it?

Colonel JOYES. Not to my knowledge. We had 75 or 80 ownerships there.

Mr. PARKER. What, in your estimation, was the cause of failure in production in plant No. 1?

Colonel JOYES. It was largely a mechanical proposition. We had leaks in the high-pressure gas pipe lines, and it resulted not only in fires but in lack of a properly pure mixture. There were several things that were not apparently calculated right, in just the right proportion. And then, too, we had to make changes in process in several places. We finally got so we could bring our mixture up to the catalyst in pretty fair shape, but the catalyst at that time had been somewhat hurt by the impure mixture that had come up to it, and it was a very sensitive catalyst. I am saying these things not in criticism of the people who worked it out, but to show you how it fell down. They use a different catalyst from the Germans, partly, perhaps, because they did not know what the German was or how they used it; they wanted to keep clear of the patent rights which the Germans had and which could not be gotten except as a favor from the Germans. Furthermore, they were looking for a catalyst which would work satisfactorily at a lower pressure than the Germans used. The Germans used 3,000 pounds per square inch, and this process was designed to use 1,500 pounds.

Mr. CROWTHER. Just at that time we needed nitrates pretty badly, did we not?

Colonel JOYES. We did need them pretty badly.

Mr. CROWTHER. Do you think it was a good proposition, generally, to go into a process that was to a very great degree experimental at that time? Do you think it was a good thing to go into that process in time of great necessity?

Colonel JOYES. It was a matter of research.

Mr. CROWTHER. That was no time to develop research, was it, when you absolutely needed the nitrates? Was it not the thing to take up the process at that time that you knew would produce ammonium nitrate?

Colonel JOYES. Absolutely so, in your fundamental needs for the war; but at the same time it is a very good business principle to carry on your development work in order to be prepared to have something better. The Germans conducted researches in processes during the war, and profited by it.

Mr. CROWTHER. Did the Alabama Power Co. purchase the right of way for the transmission line under your order, or at your suggestion? Did you have anything to do with the agreement that they were to buy the right of way?

Colonel JOYES. Of course, they did buy that on their own account and paid for it with their own money, but they did it at my suggestion.

Mr. CROWTHER. You have given the reason why you could not have enlarged the No. 1 plant so it could have been used?

Colonel JOYES. Yes, sir.

Mr. CROWTHER. That was impossible?

Colonel JOYES. It was impracticable. In the first place, to build a power plant at No. 1, or any place near Muscle Shoals, would have been perfectly possible; that is, to build a power plant anywhere, but the tremendous amount of condensation water that is required for a power plant the size of a 30,000-kilowatt plant makes it necessary that it be on a river.

Mr. CROWTHER. What was the water power at Gorgas? What was the full horsepower of the subsidiary steam plant? What was their combined horsepower?

Colonel JOYES. They do not strictly combine. They work together and reinforce each other. In the Alabama Power Co.'s system, my remembrance of what I have seen in reliable reports is that they had 67,000 or 68,000 of either kilowatts or horsepower of water power on the Coosa, and machinery for that was installed and perhaps some portion of the year the river would run enough water to develop that much power. At other parts of the year they were down possibly to 12,000 or 13,000 or 14,000 kilowatts, which was all they could get out of the Coosa.

Mr. CROWTHER. Could not the auxiliary steam plant and the water power be run together?

Colonel JOYES. Yes, sir; that was the idea precisely.

Mr. CROWTHER. Was not that big enough to supply you and still supply their customers with whom they had contracted—the power that they had contracted for—would that not have given you sufficient power to run one-half of the plant?

Colonel JOYES. We were thoroughly satisfied it could not be done, by an examination of their lists of customers and their actual production of power; that their combined power production and steam production was not sufficient. As a matter of fact, they had to run at one time as an adjunct to their system, and in order to supply their customers—they had to operate the anti-

quoted Birmingham Light & Power Co. station, where it cost them a pretty penny to get the power they had to have, and there was no surplus.

Mr. CROWTHER. Do you remember who was present at the famous midnight conference on November 13?

Colonel JOYES. At the present moment I could not be positive, but I know General Crozier was there, and I was there; Colonel White, my assistant; and Captain Osborne, and I am pretty sure Mr. Baruch was there.

Mr. CROWTHER. Yes; I think he was there.

Colonel JOYES. And probably some other people from the War Industries Board. I have, at an earlier date, looked back in my mind and tried to remember that, and perhaps I put one or two other names down, but I can not recall any other now. Probably Gen. Samuel McRoberts (then civilian), and perhaps Mr. Brookings, of the War Industries Board.

Mr. CROWTHER. Because this nitrate development at plant No. 2 was not paid for out of the original sum as set forth in the national defense act, is it your contention that that abrogated the general principle of law that was contained in that section as to the United States entering into contracts or business of this kind in partnership with private corporations? Do you contend that because this money was not used that that removed the limitation?

Colonel JOYES. I do not think I would put it that way. The fundamental purpose of that plant was that it was not an act of the President or his agent under the legislation contained in section 124 of the national defense act. It was not intended to be from the beginning, by anybody that I know of who advised the President. It was intended purely and simply to help the Government in its war needs, and, having done so, we found the most certain way to get it was to work with this corporation.

Mr. CROWTHER. You were afraid of the law the way it was; you thought it might—

Colonel JOYES (interposing). We were afraid the law might be invoked and make us trouble.

Mr. CROWTHER. You were not afraid so much that it would get you into trouble as it would keep you out of trouble if you got away from it.

Colonel JOYES. Keep us out of trouble by getting away from any spending of the money. We were afraid the spending of the money for that land would raise some color of doubt as to whether we had done it properly. Furthermore, I would say that there was a great deal of discussion there, some very bitter controversy among the people who had been deputed to consider that and advise as to the use of these different processes, and we wanted to be in accord with all of them, and they had, none of them, recommended this plan, or anything like it, under the national defense act, and we did not recommend it, either. It was for war purposes right straight through from the start.

Mr. PARKER. I forgot to ask you one question. You stated what rent was paid by the Alabama Power Co., as long as the United States paid for power.

Colonel JOYES. Yes, sir.

Mr. PARKER. If we paid for no power what did the Alabama Power Co. pay the United States?

Colonel JOYES. The Alabama Power Co. is not obligated to pay the United States a rental when the United States has suspended its demand for power. They still have to take care of the property and to keep it insured and repair damage at all times. But if they use the power machinery for their own purposes, and they have done so, they then pay us 1½ mills per kilowatt-hour for the use of that machinery. In other words, they rent the machinery from us and pay 1½ mills per kilowatt-hour for every kilowatt-hour of the power they turn out for their own purposes.

Mr. PARKER. Do you know how much that has amounted to lately, in a year?

Colonel JOYES. It is variable, but I was informed not very long ago, a couple of months ago, by some of the officers here, that the Alabama Power Co. were operating that plant up to above 100 per cent capacity. I do not know how that would figure out. This is in the record already. It would amount to a perceptible sum, I guess. After consulting the records I can confirm the figure of \$77,211.61, given by Mr. Martin, for the year 1921, as substantially correct. Final reports, adjusted to last cent, are not in our office yet—but it was certainly over \$75,000.

(Thereupon, the committee adjourned to meet Monday, March 13, 1922, at 10.30 o'clock a. m.)

COMMITTEE ON MILITARY AFFAIRS,
HOUSE OF REPRESENTATIVES,
Monday, March 13, 1912.

The committee met at 10.30 o'clock a. m., Hon. Julius Kahn (chairman) presiding.

**STATEMENT OF COL. J. W. JOYES, ORDNANCE DEPARTMENT,
UNITED STATES ARMY—Resumed.**

Mr. FISHER. Who was it in 1917 who had charge of the study of the nitrate situation so far as our country was concerned, in the War Industries Board? Was there a committee in the War Industries Board that had charge of such matters?

Colonel JOYES. I can not remember at this moment that there was any committee in the War Industries Board that had to do with the study of such matters. Mr. Baruch himself gave considerable attention to the supply of nitrates and was very active in consideration of that and in pushing the fixation methods. He was active in forming—in fact, he essentially did form, in my opinion, the international committee for the distribution of nitrate from Chile—what was called the London Executives—and also they had an American board to control the distribution of Chilean nitrate in so far as the United States was concerned—that is, to state the United States requirements to come before the international executives against the requirements of the other allies; and Mr. Baruch had with him, as his immediate assistants on technical matters, including nitrates, Mr. L. L. Summers and Mr. Chase and Mr. MacDowell. Mr. L. L. Summers and Mr. Chase—I do not remember Mr. Chase's initials—but he and Mr. Summers are partners in New York City, I think, as consulting engineers, especially on chemical processes. He is com-MacDowell—Charles H. MacDowell—you have had before you. He is connected with the Armour Fertilizer Works and I think is now president of the American Fertilizer Association. Those are the people I think of now.

As to the study of fixation processes, there was a committee appointed by the National Academy of Sciences and the National Research Council back in 1916, and that sat for quite a while and made a report, as you know. That was superseded by another one appointed, I think, very early in 1917, with some of the same members. They made a report in May, 1917, and that is the one under which we started to work and built the No. 1 nitrate plant. I think that was not tied in with the War Industries Board. That is my remembrance. Later on, there was a reconstituted committee appointed by the Secretary of War in 1918 to advise on certain matters, and of that committee Mr. Summers, of the War Industries Board, was a member at that time in 1918.

Mr. FISHER. When the drive came on your department to tremendously increase the nitrate supply, with whom was it that you conferred? Was it that committee of the War Industries Board that you conferred with before you definitely adopted a plan?

Colonel JOYES. It was not a formal committee, but there was a meeting held. The first I heard of it was a meeting called, I think, in Mr. Baruch's own office, and I am quite sure that both Mr. Summers and Mr. Chase were present, probably, also, Mr. MacDowell, and Majors Burns and Backus, Ordnance Department. I think it was on that occasion that Colonel Hoffer was present, who was in charge of the gun and ammunition provision for the Ordnance Department. It is difficult to be absolutely certain about these matters, because a good deal of time has passed, but at any rate there was a consultation there which was called together by Mr. Baruch himself to consider how to provide for the shell filler, especially, that was stated to be required by Colonel Hoffer. He was the man who brought it up. I think that has been spread pretty fully on the records after more careful search and therefore more reliably than I could state it offhand at the moment, but that was essentially the situation.

Mr. FISHER. Take, for instance, the contract that was finally signed with the Alabama Power Co., was it necessary in the procedure that was adopted in the War Department at that time for you to call into conference or have the approval of other officers in the War Department besides those in your immediate division?

Colonel JOYES. Oh, yes; indeed. As you see, my immediate division, the Nitrate Division, did not even sign the contract and did not even draft it. We negotiated with the man who drafted the contract, Colonel Williams, and who signed it. He was in the Procurement Division. It had been thought best in the reorganization of about the 1st of January, 1918, or thereabouts, to put all the contracting powers in one division, the Procurement Division, which was behind by Gen. Samuel McRoberts (National City Bank) and contained Col. R. P. Lamont, Col. Charles N. Black, ex-Senator Watson, of West Virginia, and other business men of large caliber. After that nobody else in any division signed any contract or placed any other except the Procurement Division. Anybody who had his requirements stated them and they went up to the Procurement Division to be met, and if the man who stated his requirements knew of a way to get them, he suggested that; and if he had any knowledge or was otherwise in a position to assist, he went up and helped to negotiate or led the negotiations, as the case might be. In our case, we largely led the negotiations; at least, we prominently assisted, and besides Colonel Williams, who was to actually sign the contract, in the Procurement Division, there were several individual officers of the Procurement Division who were required to sign as approving the arrangement or the contract, after fully drafted and completed. I passed in a page of approvals on the last day I was here, Friday, which showed just the names of those officers who approved it; and in addition to the individuals, there was an approval registered on that sheet—I think it was called the contract board of review of the Procurement Division. I am merely referring to that now and not naming it, because it appears on the paper which I submitted, by the correct name.

At that time I did not pass in, because my attention for the moment was diverted, a paper which I have on the table here, which shows where I applied for clearance on the contract from the office of the Purchase, Storage and Traffic Division of the War Department, General Staff, and that clearance was granted. There was also a clearance which had to be obtained from them by the clearance committee of the War Industries Board, as a final, last ratification. Here is a paper dated November 8, 1918, in which I applied to the clearance committee, Purchase, Storage and Traffic Division, General Staff, through Maj. E. B. Glenn, Ordnance liaison officer:

"Subject: Clearance for proposed contract with Alabama Power Co., Birmingham, Ala., for electric energy, etc.

"1. Clearance by the clearance committee of the Purchase, Storage and Traffic Division, General Staff, and by the clearance committee, War Industries Board, is requested for a proposed contract with the Alabama Power Co., Birmingham, for the furnishing of about 30,000 kilowatts of electrical energy for the partial operation of the United States nitrate plant No. 2 at Muscle Shoals, Ala., and for other uses in connection with the production of ammonium nitrate at Muscle Shoals and Sheffield, Ala., a draft copy of which contract is inclosed herewith.

"2. To furnish the power requirements at nitrate plant No. 2, now estimated by the Air Nitrates Corporation as being 82,000 kilowatts, provision was made for the installation of a 60,000-kilowatt steam turbo station on the United States reservation acquired for said nitrate plant, and as the Alabama Power Co. had a recently completed steam electric generating station of 20,000 kilowatts capacity located on the Black Warrior River near the coal mines, and has provided in the original construction, water intake, subfoundation, and other facilities required for a proposed future extension to that station, and could, by the construction of a transmission line between its Warrior generating station and Muscle Shoals, supply energy for construction and preliminary operation purposes, at a much earlier date than power could be provided for at Muscle Shoals, it was considered to the best interest of the United States to take advantage of the partially constructed facilities at the Warrior site, and to use them to the greatest extent possible in connection with the installation of a 30,000-kilowatt Government owned unit on the property of the Alabama Power Co.

"3. After preliminary negotiations between this office and the representatives of the Alabama Power Co., work orders were issued to the power company to construct for the account of the United States, a 30,000 kilowatt extension to the power company's generating station, an 88-mile transmission line from Warrior to Muscle Shoals, and the required step-down transformer station at Muscle Shoals. The construction work progressed, as did negotiations with the company pointing toward an equitable operating arrangement, and suitable provision for the acquisition of the additional generating capacity, step-up trans-

former station, and other facilities at the Warrior site, at some future time by the Alabama Power Co. These conditions are now fully embodied in the attached draft of contract, and have been very carefully studied by legal officers of the procurement division, and others specially qualified, so that every assurance is felt that the agreement embodies the best conditions possible under the circumstances and suitable safeguards for the interest of the United States.

"4. Early action upon this contract is requested, particularly in view of the fact that power in greater quantity than was provided in a temporary power contract entered into by the Air Nitrates Corporation and the Alabama Power Co., is now being supplied for the partial operation of United States nitrate plant No. 2.

"J. W. JOYES,
"Colonel, Ordnance Department, United States Army."

There is a notation below that over the signature of C. F. Beames, major, Ordnance Department, U. S. A., one of my assistants, dated November 12, 1918:

"NOVEMBER 12, 1918

"Clearance granted November 9, 1918, Army No. 12835.

"I certify clearance to contract between Alabama Power Co. and the U. S. No. T. 69 was granted by clearance committee and given clearance Army No. 12835, on November 9, 1918.

"C. F. BEAMES,
"Major, Ordnance Department, United States Army."

That is the record of the clearance.

Mr. FISHER. Coming specifically to that part of the Alabama Power Co. contract which gave to them the option to buy the buildings erected by the Government, can you state who it was that insisted upon that provision? Upon whose insistence did that provision go into the contract?

Colonel JOYES. Well, I doubt if I would use the word "insistence," because I think both sides looked upon it as the thing to do, if we could.

Mr. FISHER. Was it a provision that had been included in any other contract? Was it included, later, in any other contract that the Government entered into for like work or like construction?

Colonel JOYES. Yes, sir; it was quite usual. This was not an unprecedented contract in any way, shape, or manner in that regard. It was exactly the same kind of contract, in principle, that was entered into in many other cases, and it was regarded as quite normal. They had various differences in phraseology and in special provisions, but it was quite a recognized practice and considered by the department to be desirable. I have a letter here that I ran into the other day that perhaps would be significant in that connection. This is a letter in the files of the Ordnance Department, dated May 8, 1919, addressed by the Acting Chief of Ordnance to the Director of Operations of the General Staff, asking a certain arrangement for the settlement of contracts:

"MAY 8, 1919.

"From: The Ordnance Department.

"To: Director of Operations.

"(Attention of Construction Demobilization Committee, room 345, State, War, and Navy Building.)

"Subject: Disposal of plants built for and by the Army since April 5, 1917.

"1. Reference is made to your memorandum of April 22 on the above subject. A partial list of the plants on which a considerable amount of money has been spent to erect buildings and fixtures so tied to the land that separation would be difficult will be furnished your committee shortly. These facilities are grouped under district offices of the Ordnance Department under whose general control they come.

"2. With regard to the manner in which these facilities were acquired, the Ordnance Department contracts, as a rule, were production contracts made on the assumption of war of three years' duration. Contracts or procurement orders usually contained the following provisions:

"(a) As the primary consideration, production of a large amount of war material.

"(b) For the reason that the contractor was experienced, but did not have sufficient facilities to meet the demand of the Government, procurement by the contractor of (a) land—as a manufacturing site, with the provisions that the lease to the Government would be nominal and that the Government after the war or termination of the contract would first give the contractor preferential consideration in the purchase of the facilities and sell them to him or remove

the facilities; (b) temporary buildings and fixtures, which were to be personal property of the Government; (c) manufacturing equipment, which was to be personal property of the Government.

"3. The conferences preliminary to giving orders usually were conducted on broad principles. The duration of the war and business conditions being uncertain, agreement by the contractor to purchase the buildings and fixtures at a determinable price after the war was not considered fair. The contractor represented that he wanted to buy the buildings and that he would pay a better price provided he was allowed to specify the character of the facilities and the construction and arrangement of the buildings. On the assumption he would do this, the request was usually allowed, and he was to be given preferential treatment if the buildings were sold. As a general rule, the buildings were much better than the need warranted, and much better than would have been built if these representations had not been made by the contractor. The contractors in most cases produced a small amount of material or nothing.

"4. As a rule a contractor's existing plant was modified and additions were so made to the plant that efficient production would result. In such plants the Government-owned buildings and facilities became practically a part of the contractor's plant. Some plants were built in such a manner that the Government buildings house complete processes without reference to the contractor's plant except to make use of existing transportation facilities and utilities such as water supply, power supply, and refuse disposal."

That is signed by W. S. Peirce, brigadier general, Ordnance Department, U. S. A., Acting Chief of Ordnance. That is all that I copied from the record, because the remainder relates merely to the proposal which the Ordnance Department had to make as to the desirability of a certain method of settlement of those contracts.

Now, that is for the Ordnance Department. I have a couple of publications that came out in 1918 that are pertinent to this particular question, and may be put in the record or as much of them as is desired.

On August 3, 1918, the War Department, purchase, storage, and traffic division, of the General Staff, an office then under the command of Maj. Gen. George W. Goethals, and in complete control of all matters of procurement, whether they actually did the procurement or not, issued a supply bulletin No. 13 headed:

"Subject: Contract provisions regarding increased manufacturing facilities." It began:

"1. Where increased manufacturing facilities are constructed at the expense of the Government or where their cost is amortized in the price paid by the Government, the contract shall provide that title to such facilities shall vest in the United States. The contractor may agree to take such facilities at a fair value in diminution of the profit which he otherwise would make.

"2. Where title to increased manufacturing facilities vests in the United States, the contract shall provide that the contractor may make written offer to the Government to purchase such facilities, whereupon, if the Government accepts such offer the contractor shall become obligated to pay for such facilities at their appraised value at that time. The contract shall further provide that if the contractor does not make or the Government does not accept such offer, the Government shall have the right to remove such facilities after the termination of the contract within a time reasonably sufficient to effect such removal. The contract may provide that the Government shall have an option at the termination of the contract to purchase at an appraised value the land on which such facilities are erected.

"3. If, in any case of such increased manufacturing facilities, it is desired to make a contract along lines different from those herein established, the approval of the superior board of review shall first be secured.

"By authority of the Secretary of War.

"GEO. W. GOETHALS.

"Major General, Assistant Chief of Staff,

"Director of Purchase, Storage and Traffic."

Here is another, a supply circular No. 128, dated December 13, 1918, from the same office. War Department, Purchase, Storage and Traffic Division, General Staff. This is likewise signed by Maj. Gen. Geo. W. Goethals. This is very long. It begins with a preamble, "Attention is directed to the desirability of using, where applicable, the following contract provisions on real estate and structures and equipment thereon." There is so much of this I doubt if it would be desirable to have it all read. Essentially, it is giving

standard forms. The first caption is, "Selection and purchase of site of plant. The contractor agrees forthwith to select," etc. That is in case where there is actual conveyance of the land in fee to the United States.

The next caption is, "Title to increased facilities: It is expressly agreed that the buildings, plant, equipment, machinery, and other improvements, etc., shall become the sole property of the United States and that the contractor shall not set up any lien, etc., against them," etc.

Mr. FISHER. Colonel, have any steps been taken whatsoever under the Alabama Power Co. contract to make settlement accorded to the means provided under the terms of the contract?

Colonel JOYES. Not to my knowledge, sir. The matter has not been in my charge in the period you refer to, since fairly early in 1919. I had some connection with the matter of the nitrate business after that time, but the control was vested in Mr. Arthur Glasgow and Mr. George J. Roberts, civilians, in order that they might try and find a business arrangement. Subsequently Maj. J. H. Burns has been in charge.

Mr. FISHER. In the construction of the steam power plant as a part of nitrate plant No. 2, does that generate power sufficient to carry nitrate plant No. 2 as a going concern?

Colonel JOYES. You are referring to the steam plant which is at nitrate plant No. 2?

Mr. FISHER. How much power can be generated at the powerhouse at plant No. 2?

Colonel JOYES. That is rated at 60,000 kilowatts, at a certain power factor. There was, of course, a rating given to it in kilo-volt amperes, which is a somewhat different proposition on account of the power factor. The voltage and the amperage being not in phase exactly will make a little less rendition in kilowatts than would be the product of the volts and amperes. The units there, as I remember it, are rated as something like 66,000 k. v. a., and it is something like that, but I believe that unit is capable of running a little overload; essentially, all units are, but I would not say that that should be run continuously at much over 60,000 kilowatts with such a power factor as it will probably have. That is about as much as it ought to give. That is about 80,000 horsepower, and I believe the full power required for full rated production, 110,000 tons of ammonium nitrate per year, requires—well, it has been variously figured and there is a little discussion and uncertainty as to just how much power is really required, but it has been variously stated at various places between 82,000 and 100,000. I think it comes, myself, fairly well up toward 100,000. I notice that there has been the statement made that the 60,000 kilowatt unit at the plant would run the plant, and it may be possible that it would skim through, for some such reasons as these: That the apparatus might give a larger yield for a given input of electric power than was indicated by the trial test, when it got to going smoothly. That is problematical. Again, that statement may have been predicated upon the running of the steam power plant a little overload. As to that, I really can not say, but I should say that it needs a little more power than is really present in the generating unit of the steam power plant of nitrate plant No. 2 to produce is full rated production.

Mr. FISHER. Have you examined—

Colonel JOYES (continuing). We changed the plan of that power plant early in its construction and increased the size of it so that there was ample room in the electric generating room to put in another unit. Something on the order of a 30,000-kilowatt unit could be put in there. There is ample space. The boiler capacity is sufficient to carry it. There is always put in boiler capacity that is expected to be carried as spare usually, and we have there 12 boilers, 3 of which were put in after the original plans were made, with the expectation that that would be a more liberal allowance of spares and at the same time would provide steam enough for an additional 30,000 unit if it were found necessary at any time.

Mr. FISHER. Have you examined the Ford offer?

Colonel JOYES. Yes, sir; sketchily. I would not say I have studied it.

Mr. FISHER. Particularly as to the provision in the Ford offer which offers to keep the nitrate plant No. 2 as an operating chemical plant, so that the Government can have it as a laboratory for its officers or employees, would you say that the provisions of that offer would mean nitrate preparedness for our country?

Colonel JOYES. I think that is a highly advantageous provision in his contract, and I think that would be a very useful contribution toward preparedness as to nitrogen provision of the United States. Its research-laboratory feature I regard as very desirable, and the fact that it keeps the plant in readiness to produce up to its full capacity of the product for which it was built is also a very desirable provision, and in so far as the capacity goes, it is protection for the United States. That is not, however, to be regarded as providing all that the United States would need in that regard. I qualify that because, to be entirely and absolutely safe in the matter of nitrogen from the military munitions standpoint, that is not all that is required. It is not complete independence of Chile, as the people speak of it, for several reasons. It is not a sufficient quantity and the product is not brought to the final state which makes it available for all processes. The ultimate product—ammonium nitrate—was what we were after in 1917 and 1918. That would not, however, be what we might want at another time. It would not help us one iota in the manufacture of smokeless powder, because smokeless powder requires to be made out of cotton or paper pulp or a similar cellulose material, and to be nitrated with nitric acid; and not only that, it must be strong nitric acid, a concentrated nitric acid, and there is no provision at nitrate plant No. 2 for concentrating the acid. It comes to a strength in the towers of about 50 per cent HNO_3 , and the rest is water, and I think that is about as high as it can go and probably higher than will be done in actual practice ordinarily. To use that in smokeless-powder manufacture it must be stronger. To ship it to another point it must be stronger, because the weak nitric acid corrodes iron, while the strong nitric acid will not. There is a peculiar situation in that regard. You see therefore the reasons why I qualify my statement as to "full preparedness," but it would be a most desirable step toward preparedness.

Mr. FISHER. If the Congress fails to accept the Ford offer, has the Ordnance Department or the War Department, to your knowledge, any program for the production of nitrates?

Colonel JOYES. I have no personal knowledge of any program that the War Department would have to propose at this time. The War Department did propose the authorization by Congress of a corporation to take over and operate the power of the Wilson Dam and all the nitrate properties, together with such cash as remained on the books, about \$1,500,000 or so, under the old \$20,000,000 appropriation, in return for receiving which this corporation was to issue common stock which was to go to the United States in toto. Then they were to have as an operating capital about \$12,000,000, which was to be provided by the United States and the return for which was to be preferred stock issued to the United States in toto. In other words, no one should own any stock in the corporation except the United States. The directors were provided for and all that sort of thing. It was also proposed that to get the operating capital of some \$12,000, a certain amount of Chilean nitrate in storage would be marketed instead of trying to raise the money. That was passed in modified form by the Senate, I think, in the session of 1919—I can not remember whether that was 1919-1920 or 1920-1921, but it was passed by the Senate in modified form and failed to come up in the House to a vote. Since then I believe there has been no effort to revive it on the part of the War Department.

Mr. WRIGHT. Colonel, when did you locate nitrate plant No. 2?

Colonel JOYES. About from the 20th to the 23d of November, 1917. It was essentially decided that it would go to the vicinity of Muscle Shoals when the proposal was accepted in the office of the Chief of Ordnance and by him on the 13th of November. It was practically a foregone conclusion at that time, although it was not definitely settled, that it would all go there as a single plant.

Mr. WRIGHT. When did you actually lay it out and go down there and take possession of the land?

Colonel JOYES. My first answer covers that question, about the 20th to the 23d.

Mr. WRIGHT. In doing that, under what law were you operating?

Colonel JOYES. Under the general laws which allowed the President to make provision of munitions for the war, under the appropriation act for the armament of fortifications.

Mr. WRIGHT. If you were doing that, why did you have an allotment made out of this \$20,000,000 fund created by the national defense act of June, 1916, set apart with which to buy the very ground you were going to place the nitrate plant on?

Colonel JOYES. Because of the feeling and the decisions and instructions that were given by those in authority that we practically could not use the general appropriations for the purchase of land; and that was barred, in so far as law went, by two sections of the Revised Statutes, which caused the great trouble there, section 355 and section 3786; 355 was about the examination of title and certification by the Attorney General and permission of the State before anything could be done to improve land, and then the other, section 3786, was that no land should be purchased except by specific act of Congress mentioning the land specifically.

Mr. WRIGHT. Colonel, did you have much trouble acquiring land, even in the early stages of the war? How did you get possession of all these vast tracts on which you constructed cantonments and other war activities? Did you just go out and take them?

Colonel JOYES. Congress passed on July 2, 1917, a law which provided for what they undoubtedly figured would be the most urgent needs. At that time nobody seemed to have thought, for some unaccountable reason, of the munitions program, but they passed a law at that time which suspended section 355 of the Revised Statutes and which authorized the President to take possession permanently or temporarily of any lands that were required for three things—the military camps, the coast defenses, and fortifications. I am not attempting to quote the language, but there were three things mentioned. I put the section in evidence the other day, and perhaps I had better speak from the book.

Mr. WRIGHT. If that is already in the record, I do not want it repeated.

Colonel JOYES. It is already in the record.

Mr. WRIGHT. Well, stop right there on that.

Colonel JOYES. The language of the law of 1917 is right here at the bottom of this sheet [indicating].

Mr. WRIGHT. Now, colonel, if you had \$200,000 set apart, out of the national defense fund with which to buy the land, how were you going to pay for the construction work down there on nitrate plant No. 2?

Colonel JOYES. The instructions were just this: I was given allotments out of the appropriation which is officially known as armament of fortifications C. That is the subhead of the armament of fortifications appropriation which has to do with the providing of ammunition for various kinds of cannon, and that was to cover all the expenses of the plant. The only reason for taking the \$200,000 allotment out of nitrate plant money; that is, the \$20,000,000 of the national defense act was that that was the only place we could see where we could get any authority to buy the land. It was used in the same way in other places. I know we drew upon it for the land for the nitrate plants in Ohio, and had an allotment set up in the same way there; but before we came to spend the money a new law had been passed, and there was authority for getting the land from armament of fortifications, and we had the allotments revoked in the same amounts originally made, and we had new allotments made from armament of fortifications, and paid for the land out of those allotments. To show you the situation as to land. I was called on several times to consent to a request upon the President to allot certain sums out of the \$20,000,000 for the purchase of land at various places for various needs of the Ordnance Department. I know it was considered—I am positive it was considered and I was consulted about it, where it was actually done or not—that money should be taken from that \$20,000,000 to buy land at Perryville for that plant to make ammonium nitrate by other than a fixation process, a nonfixation process, and for, I think, one of the big powder plants at Nitro or Old Hickory; I do not remember now positively. I do not think a cent of money was spent for any such purpose out of the \$20,000,000, but I know it was considered and I was consulted about it.

Mr. WRIGHT. Is it not a fact, colonel, that when you were locating this nitrate plant that the only authority of law you had for doing so was the national defense act of 1916, and that, regardless of where the money was to be derived with which you would pay for the construction, that the authority for establishing these plants was derived from the act of 1916?

Colonel JOYES. I would not say the authority for establishing the plants. It could hardly be said, I believe, that the authority for establishing the plant could be given by the national defense act, which appropriated only \$20,000,000. We knew we could not do it with that.

Mr. WRIGHT. I am not talking about the fund so much.

Colonel JOYES. I question whether we had any authority of law.

Mr. WRIGHT. I am not talking about the fund with which you were going to pay for this work so much as the authority you had for starting the work.

Colonel JOYES. I am frank to say to you that I think there was very questionable authority for doing it.

Mr. WRIGHT. Did you know exactly where you were when you were establishing these plants, as a matter of legality?

Colonel JOYES. We had a pretty fair idea that we were working with very little backing in law or legislation for all the things we were called upon and required to do.

Mr. WRIGHT. But the best legislation you had, so far as these nitrate plants were concerned, was the national-defense act of 1916, and the evidence of that is that the very money with which you were to pay for the land was allotted out of the national-defense fund.

Colonel JOYES. We did that, sir; not because it was authority for anything carrying the word "nitrogen" or "nitrate" but because it carried the word "land." That was the only reason, sir.

Mr. WRIGHT. The land could only be used, if you paid for it out of the \$20,000,000 for nitrate purposes, for the establishment of nitrate plants. You would not have been authorized, in other words, to have taken part of that \$20,000,000 created by the national-defense act of 1916 and built a cantonment on the land or to have bought the land and built a cantonment on it.

Colonel JOYES. I do not think we would have gone quite that far, sir; but I know that they had their eyes on it for other things than fixation processes, as I told you.

Mr. WRIGHT. Now, your idea is that the sole means by which to determine under what law these plants were constructed, especially nitrate plant No. 2, would be with reference to the funds with which they were paid for?

Colonel JOYES. I think that is a legitimate assumption.

Mr. WRIGHT. That is your idea about the whole situation?

Colonel JOYES. That is my belief, sir.

Mr. WRIGHT. And that is the reason you claim now that nitrate plant No. 2 was not constructed with reference to the national-defense act of 1916?

Colonel JOYES. Yes, sir.

Mr. WRIGHT. Because it was not paid for out of those funds?

Colonel JOYES. That is my belief. I am not claiming anything, sir. I am not making any advocacy of any particular point of view. I am simply giving you what light I can on it. That was the intent we went under. What I am here to say is that the whole reason—

Mr. WRIGHT (interposing). Colonel, let us understand one another. I am not here to criticize you, I am going to assume—

Colonel JOYES. I am not looking for it.

Mr. WRIGHT. I am going to assume that with the situation surrounding you, you evolved out of this situation the best contract you could.

Colonel JOYES. We tried to. What I would like to say to you is—

Mr. WRIGHT (interposing). And what I mean by the situation is that your contracting party was pretty difficult to deal with.

Colonel JOYES. Oh, yes, sir.

Mr. WRIGHT. You said here, last week, that the Alabama Power Co. submitted some suggestions in the drafting of this contract that you could not meet.

Colonel JOYES. Yes, sir.

Mr. WRIGHT. Now tell us some of the claims they put up while you were negotiating with them, if you recall them?

Colonel JOYES. That is a pretty hard thing to come back to, sir, from such a long distance of time, but I will do my best.

Mr. WRIGHT. Well, I suppose some of those suggestions stood out prominently. What were the ones that impressed you during these negotiations, as to the claim they were making or their insistence on what they wanted, and so on, that you did not think could be met? I am trying to get the attitude of the party you were contracting with. That is what I want.

Colonel JOYES. I know. I had some extracts, sir, from the earlier attempts at a contract that might have helped a little bit on that. Well, for one thing, the president of the Alabama Power Co., Mr. Mitchell, in some of the very earlier talks had suggested or had hinted at some improvement of the water powers in Alabama as a means to help out, and I told him we could not think about that.

Mr. WRIGHT. What were those water powers, some that they controlled?

Colonel JOYES. Yes, sir; I believe so, along the Coosa. Most of the difficulties we had with them were over little things that were coming up. For instance, they would want us to put in a little bit more than we thought we ought to put in.

Mr. WRIGHT. What do you mean by "a little bit"?

Colonel JOYES. Sometimes I mean a very little bit and sometimes I mean a big bit. That was not an accurate expression, Mr. Wright. I should not have used it. I mean, for one thing, in the beginning it was represented that we ought to put in two turbogenerators down there in order that one might be a spare.

Mr. WRIGHT. That turbogenerator would cost about \$1,500,000, would it not?

Colonel JOYES. No, sir; the turbogenerator costs about \$350,000.

Mr. WRIGHT. But installed it would cost about \$1,500,000?

Colonel JOYES. Installed, it would cost considerable.

Mr. WRIGHT. And that was one of the little things?

Colonel JOYES. No, sir; I told you that I used that word inadvertently.

Mr. WRIGHT. Then let us withdraw that.

Colonel JOYES. It would have been better not to use that word. Then they stood out for more boiler capacity than we wanted to put in, and we ultimately put in more than I would have liked to put in, but some of my own advisers finally brought me around to that, showing that we would be in a better position as to the assurance of our power if we put in a little more liberal boiler capacity.

Mr. WRIGHT. Right there, Colonel, you had a good deal of difficulty in standing between these people and the Government's interest, did you not, all along?

Colonel JOYES. I do not think I would ever willingly go into such a proposition and I did not go into it willingly.

Mr. WRIGHT. I say, you had great difficulty. It was a hard task that you had to protect the Government's interest as against these people with whom you were contracting, the Alabama Power Co.

Colonel JOYES. It was hard; yes, sir.

Mr. WRIGHT. Right there, Colonel, really all you wanted was a little auxiliary power to come from this plant?

Colonel JOYES. Quite a good deal of auxiliary power.

Mr. WRIGHT. Well, some auxiliary power to supplement your steam plant at nitrate plant No. 2, the one you were constructing?

Colonel JOYES. No; that is not quite the set-up. What we really needed was enough power to put our first half of the plant into production and be able to furnish the ammonium nitrate that our people were short on at the time, when the chemical plant was expected to be ready to produce it.

Mr. WRIGHT. Well, the point is that you did not anticipate going into the improvement of the Gorgas steam plant on the Warrior River on as large a scale as they wanted you to go into it.

Colonel JOYES. Not quite, sir. I would not have ever willingly spent a penny for any such purpose as that if I possibly could have avoided it.

Mr. WRIGHT. In other words, they impressed you with the fact that they had built this plant for the future; that they had installed a plant there, and their idea was to increase it for the future and they wanted to get you to enter into a contract with them by which they could do that.

Colonel JOYES. Well, I do not think there is any doubt whatever in the world that the Alabama Power Co. was quite glad we came in there and did it. I do not doubt it at all. They had planned, as I have said, the improvements, and they had ordered their turbine. They had their turbine under order, and some other stuff. I noticed in the hearings the other day that their president said one piece of apparatus he had been actually forced to buy and had it in his plant, because he could not cancel his order, and they had not been able to put that in, or had not done so. Their reasons for not doing it were their own, and I really am not able to speak, but the general presumption was that perhaps they were not quite ready for it in their business and perhaps they could not get the money, either one or both.

Mr. WRIGHT. Now, you have mentioned the fact that one suggestion they made was to improve their water power and the next one was that they wanted two of these—what do you call them?

Colonel JOYES. Turbo generators.

Mr. WRIGHT. Two of these turbo generators installed instead of one. Now, what were some of the other things that they suggested?

Colonel JOYES. I have told you that they advised or recommended or asked for more liberal boiler capacity than—

Mr. WRIGHT (interposing). Than you thought the plant required?

Colonel JOYES. Than I thought at first the plant required, and then they asked more in the way of auxiliary improvements, such as are always necessary to the running of a power plant in an isolated place like that.

Mr. WRIGHT. Well, did you have much difficulty in reaching an agreement with them about this sale proposition—section 22 of the contract; I believe it is—which you have analyzed here?

Colonel JOYES. As I remember it there was a considerable amount of difficulty in reaching anything like an agreement, mostly as to the methods, the time, etc. As you know, in their very first proposal they said they would put in at their own cost an extension to their plant to support our power requirements provided we would make them or get them a loan. Then there were various other ways that we thought of to try to achieve the same end. As I said the other day, we sent them around to the War Finance Corporation or War Credits Board with one of my officers to see if they could not get something in that way.

Mr. WRIGHT. Now, going back a minute. I believe you said last week that the first mention you recall of the Alabama Power Co. in this project came through the American Cyanamid Co.?

Colonel JOYES. Yes, sir; I believe so.

Mr. WRIGHT. Was that directly to you or your department from the American Cyanamid Co. or was it the Alabama Power Co.'s offer mentioning the fact that their attention had been called to the matter by the American Cyanamid Co.?

Colonel JOYES. Their name was mentioned in those letters or proposals from the American Cyanamid Co. of various dates.

Mr. WRIGHT. Can you give us the date of that?

Colonel JOYES. They were at various dates, from October 29 up to November 13, and in several of those the Alabama Power Co.'s system is mentioned.

Mr. WRIGHT. Have you inserted those letters in the record?

Colonel JOYES. They are all in the record of Mr. Graham's subcommittee on ordnance war expenditures.

Mr. WRIGHT. I would like to get those dates in this record.

Colonel JOYES. I am sure it is mentioned in there. The first I heard directly from the Alabama Power Co. was in a letter from them. Now, I can not remember, but I think it is likely that—

Mr. WRIGHT (interposing). But the first suggestion—

Colonel JOYES (interposing). Pardon me; I would like to correct one thing I said the other day. I think it is likely I said the other day that the first communication I had from them was their proposal dated November 6 or thereabouts, but I found accidentally in looking at the files the other day that there was an earlier letter of November 1, 1917. That is a difference of about five days, but I would like to have it as exact as possible. That was a general statement that their attention had been called to the situation, and so on. That was about all.

Mr. WRIGHT. It might become material, Mr. Chairman, to get these dates in the record. I do not think they are in the record. That is, the dates of this correspondence between the department and the American Cyanamid Co. and the Alabama Power Co. and the department.

The CHAIRMAN. As I recall, when we took up this matter originally most of these dates were put in the record.

Mr. WRIGHT. No, sir; he refers here to the report of the Graham committee and says they are in there, but I understand they are not in this record.

The CHAIRMAN. Can you give the dates?

Colonel JOYES. May I refresh my memory from this record of the Graham committee for a moment? I do not know whether it is in this volume or not.

Mr. WRIGHT. I do not care to consume the time by waiting for that now.

The CHAIRMAN. Colonel, can you get those dates?

Colonel JOYES. Oh, absolutely; yes, sir.

The CHAIRMAN. And will you please put them in the record?

Colonel JOYES. I will be very glad to do so, Mr. Kahn. That is very simple, and they are very closely connected, and they are all embraced absolutely in between about October 29 and November 13.

Mr. PARKER. Are the letters short?

Colonel JOYES. No, sir; the letters are quite long.

Mr. PARKER. You spoke of a letter in which they offered to build an extension if you would lend the money. Was that in a letter?

Colonel JOYES. Yes, sir; that is a letter that would occupy about a page of the record of the hearings.

Mr. PARKER. I would like to see such an important matter as that put in just as it is.

Colonel JOYES. Very well, sir.

(The witness subsequently submitted the following:)

Memorandum: Citations of mentions of or allusions to loan as basis of additional facilities Alabama Power Co. system.

The following documents pertinent are listed for convenience of reference, as they do not all appear in the records of this committee; page numbers refer to report of hearings before the Subcommittee No. 5 (Ordinance) of the Select Committee on Expenditures in the War Department, House of Representatives. Sixty-sixth Congress, first session, on war expenditures (Hon. William J. Graham, chairman).

Letters from American Cyanamid Co.: October 13, 1917, page 2937; October 29, 1917, page 228; November 5, 1917, page 230; November 12, 1917, page 234; November 13, 1917, page 238.

Letters from Alabama Power Co.: November 1, 1917 (quoted immediately following this list); November 6, 1917, page 2708. (This letter of November 6 is also printed at an earlier point in the present hearing.)

ALABAMA POWER CO. (INC.),
New York, November 1, 1917.

Col. J. W. JOYES,
Division T, Ordnance Department,
719 Fifteenth Street NW., Washington, D. C.

DEAR SIR: The officers of the American Cyanamid Co. advise us that our cooperation may be desirable in connection with the early supply of electric energy for the production of nitrates in northern Alabama. We wish to assure you of our hearty cooperation in any measure which will tend to facilitate the Government's ends in this direction.

At present our nearest point of distribution to the proposed nitrate plant at Muscle Shoals is probably our steam plant on the Black Warrior River, which is adjacent to ample water and coal supply. We now have installed at this plant one 25,000 KVA steam turbine unit of the most modern type, this installation having been completed only within the past two weeks. In addition, we have 12,500 KVA steam plant installed at Gadsden, Ala., and hydraulic plant of 67,500 KVA installed at Lock 12 on the Coosa River, 45 miles southeast of Birmingham. These plants are all interconnected on the same transmission system.

We believe we can arrange to supply some 30,000 kilowatt capacity on any reasonable notice within six months, and this amount can easily be doubled within a year if the Government will lend its support.

We believe you are familiar with the general hydroelectric possibilities of Alabama and we will merely add that with Government aid we believe that we can give the Government any amount of hydroelectric power it may require within a shorter time than it can be procured anywhere in the central or eastern part of the United States.

Any further data you may desire in this connection we shall be very glad to furnish you, and we are requesting our chief engineer, Mr. O. G. Thurlow, to remain in Washington in case any further information may be desired.

Very truly yours,

JAMES MITCHELL, President.

Note that the earliest communication received by the witness from the American Cyanamid Co., namely, that of October 13, 1917, which was merely a preliminary outline of a possible but indefinitely-described war plant, contained an intimation that power could be secured for an emergency installation in northern Alabama by cross-connecting various power lines in that section of the country, at a price of 7 mills per kilowatt hour, but did not hint at any financing.

The American Cyanamid Co. in letter of October 29, 1917, outlined alternative plans for a Government ammonia plant, and one containing the following:

"It is contemplated, as a possibility also, that the Government would have to provide capital for the construction of 80 miles of transmission line at an estimated cost of \$1,000,000."

Note, this power was estimated at 1 cent per kilowatt hour under plan 3, the following:

"Plan No. 3 is based upon the Government's loaning to the local hydroelectric power company \$2,500,000, to be paid by the power company at the rate of 3 mills per kilowatt hour on the ammonia plant switchboard for current used by the ammonia plant. Until the full amount of \$2,500,000 is repaid the charge for power would be 1 cent per kilowatt hour and 7 mills thereafter. It is naturally impracticable to state definitely whether such an arrangement could be made but the prospect is at least a favorable one."

"The \$2,500,000 loan to the local hydroelectric power company would be expended in the installation of new hydro and steam generator units and for transmission line."

The American Cyanamid Co. on November 5, 1917, proposed a plan for a plant specified in two parts:

"Part 1 provides for an ammonia gas plant of a capacity of 500 tons of ammonia (NH₃) per week, receiving its power, approximately 30,000 kilowatts continuously, from the Alabama Power Co.

"The Alabama Power Co. will have available from the 1st of June, 1918, to the 1st of January, 1919, the requisite amount of power for part 1 without causing its customers to be deprived of power necessary for the operation of their plants. Subsequent to this latter date, however, it will be necessary to meet the growing demands for power and the contracts upon the books of the Alabama Power Co. for increase in its power deliveries and for furnishing the power required for part 1 to have installed at its Warrior River steam plant a new 25,000 to 30,000 K. V. A. turbo-generator unit with the requisite boilers and transformers. The most convenient and economical transmission of electric power from the lines of the Alabama Power Co. to Muscle Shoals is by an 82-mile transmission line from the Warrior River plant.

"The estimated cost of these additions to the physical properties of the Alabama Power Co. is as follows:

Complete installation of a 25,000 K. V. A. turbo generator unit at the Warrior River power station-----	\$1, 250, 000
Outdoor step-up transformer station, substantially 30,000 K. V. A. capacity-----	300, 000
82-mile transmission line from the Warrior River power station to Muscle Shoals-----	700, 000
Total-----	2, 250, 000

"The Alabama Power Co. has offered to deliver the requisite electric power for part 1 on the switchboard of the plant at Muscle Shoals for 7 mills per kilowatt hour, beginning when part 1 shall be in readiness to receive the power. The United States Government is to loan the Alabama Power Co. an amount of money equivalent to the cost of the additions to its property mentioned above and estimated at \$2,250,000, and not to exceed \$2,500,000, which is to be repaid by the Alabama Power Co. at the rate of 3 mills per kilowatt hour of the power delivered to the ammonia gas plant at Muscle Shoals. This will reduce the out-of-pocket cost of power used in part 1 to 4 mills per kilowatt hour and will discharge the indebtedness of the power company to the Government in substantially three years."

Attention is invited here to the mention of an offer by the Alabama Power Co. It is not known whether that referred to a communication from the Alabama Power Co. to the American Cyanamid Co. or to the proposal addressed to the Ordnance Department, division T, by the Alabama Power Co. under date of November 6, 1917.

The American Cyanamid Co.'s proposal of November 13, 1917, the proposal accepted by the Ordnance Department, contained the following:

"The site for the plant suggested as the most desirable is in the vicinity of Muscle Shoals on the Tennessee River in northern Alabama. Power is available at this site sufficient for the operation of one-half the said proposed Government plant from the Alabama Power Co., which will have available from the 1st of June, 1918, to the 1st of January, 1919, the requisite amount of power, without causing its customers to be deprived of the power necessary for their uses. Subsequent to this latter date, however, it will be necessary, in order to meet the growing demands for power upon the Alabama Power Co. for that company to install at its Warrior River steam plant a new turbo-generator unit of approximately 30,000 KVA. capacity, with the requisite boilers and transformers. The

most convenient and economical transmission of electric power from the lines of the Alabama Power Co. to Muscle Shoals is by an 82-mile transmission line from the Warrior River plant.

"The estimated cost of these additions to the physical properties of the Alabama Power Co. is as follows:

Complete installation of a 25,000 KVA. turbo-generator unit at the Warrior River power station-----	\$1, 250 000
Outdoor step-up transformer station, substantially 30,000-kilowatt capacity-----	300.000
82-mile transmission line from the Warrior River power station to Muscle Shoals-----	700,000
Total-----	2, 250,000

"The Alabama Power Co. in a proposal dated the 5th instant, addressed to Col. J. W. Joyes, Division T. Ordnance Department, has offered to deliver 30000 kilowatts on the switchboard of the proposed Government plant at Muscle Shoals for 7 mills per kilowatt-hour, beginning not later than the 1st of June, 1918. The United States Government is to loan the Alabama Power Co. an amount of money equivalent to the cost of the additions to its property mentioned above and not to exceed \$2,500,000. The loan is to be repaid by the Alabama Power Co. at the rate of 3 mills per kilowatt-hour of the power delivered to the proposed Government plant."

The undersigned is convinced, from intimate acquaintance with the business and the records, that the Alabama Power Co. submitted no proposal dated November 5, 1917, but did submit one dated November 6, 1917—the error made either in American Cyanamid Co.'s letter or in the Ordnance Office records, but appears nominal; the essential point is considered well established that the two references are to the same paper and that but one proposal was submitted by the Alabama Power Co., namely that above listed as dated November 6, 1917, and appearing above in this record.

Aside from the mention of the Government financing a loan, etc., by the American Cyanamid Co. in its several letters, which the undersigned had always taken as indicating the result of inquiries made by the American Cyanamid Co. in order to suggest in its several proposals methods of providing power for the plants proposed, attention is invited to the letters from the Alabama Power Co. The earlier, that of November 1, 1917, reprinted above, opens by stating that the American Cyanamid Co. have advised the Alabama Power Co. that the latter's cooperation may be desirable in connection with early supply of electric energy for nitrates in northern Alabama, assures Alabama Power Co.'s hearty cooperation in any measure to facilitate the Government's ends and proceeds to indicate its power resources. to state its belief that it can arrange to supply some 30,000 kilowatts on reasonable notice within six months "and this amount can easily be doubled within a year if the Government will lend its support."

Later on appears the statement that "with Government aid we believe that we can give the Government any amount of hydroelectric power." In the more definite proposal of the Alabama Power Co., dated November 6, 1917, reprinted above and in other hearings, the power company, referring to conference with Mr. Frank S. Washburn of the American Cyanamid Co., proceeds to formulate a proposal along general lines as to supply of power. After stating that "the financing of such an installation at this time would not be warranted by the present needs of the power company," it estimates the cost of the necessary additions to its Warrior River steam plant as approximately \$2,250,000, and states, "if the Government will finance the undertaking and assist in delivering, the power company will be prepared to install * * *"; also in the same letter, "the power company will undertake to set aside 3 mills per kilowatt hour for all energy supplied under this proposal until the Government has been reimbursed for all sums advanced to the company in this connection."

J. W. JOYES,
Colonel, Ord. Dept., U. S. A.

Mr. STOLL. How much power was the Alabama Power Co. to furnish the Government?

Colonel JOYES. How much did it furnish?

Mr. STOLL. How much was it to furnish?

Colonel JOYES. I can check it up right out of the contract, to be exact. Upon the termination of the preliminary operation provided—

Mr. STOLL (interposing). I just want the amount; I do not care for any discussion of it.

Colonel JOYES. To the extent of the capacity of the Warrior extension at the time, and that meant 30,000 kilowatts, approximately.

Mr. STOLL. Is that from the plant the Government built?

Colonel JOYES. It was to be furnished by the Alabama Power Co., regardless of whether they furnished it out of that plant or not.

Mr. STOLL. Suppose they furnished it out of the plant; was that a part of the contract?

Colonel JOYES. I do not think I quite get your point.

Mr. STOLL. What I mean is this: The Government furnished all the money to build the Warrior extension?

Colonel JOYES. Yes, sir.

Mr. STOLL. Was the Alabama Power Co. to furnish the current from the plant the Government built?

Colonel JOYES. At their own volition, to do that or not.

Mr. STOLL. We were to pay them for the current they furnished from our own plant?

Colonel JOYES. Yes; because they rented that plant from us and were to pay for the rental of it. They paid in two ways. In the first place, whenever we were operating—

Mr. STOLL (interposing). I do not care to go into a discussion of that.

Colonel JOYES. I can not answer your question without telling you this, that they were to pay 6 per cent per annum of the total cost, plus 2 mills per kilowatt hour that they furnished us, toward the amortization of the plant. Does that answer your question?

Mr. STOLL. They were to take the plant that was built by the Government's money?

Colonel JOYES. Precisely.

Mr. STOLL. There was no current large enough to pay for the plant itself?

Colonel JOYES. They were—

Mr. STOLL (interposing). Is that true or not?

Colonel JOYES. It amounts about to that, I think, sir.

Mr. STOLL. So if the contract had been carried out as was intended, the plant built by the Government money, they would have sold the power to the Government and thereby paid for the plant, and it would not have cost them a copper.

Colonel JOYES. It is like any other commercial transaction.

Mr. STOLL. It would not have cost them a cent.

Colonel JOYES. I think that is about right. I think in most every direction that is so. A man puts in an addition and he sells the product at the cost which will amortize his investment in the plant and make him a profit besides.

Mr. STOLL. Do you think that was a good contract for the Government?

Colonel JOYES. I consider it the very best we could do under the circumstances, and it is not an unprecedented contract by any means; there were others on the same basis precisely that were made during the war.

Mr. STOLL. Did Mr. Washburn have anything to do with that contract?

Colonel JOYES. To my knowledge, nothing whatever, directly. He did have this much by way of introduction to it, that he went and spoke to the officers of the Alabama Power Co. before he made some of his proposals to the United States, and he suggested to them that they might be called upon to supply some power.

Mr. STOLL. This contract was made under the law of July 9, 1918, which authorized the Secretary of War to sell any real estate or plants that the Government had?

Colonel JOYES. I do not know that I would be positive about that, sir. I think that law covers it.

Mr. STOLL. What law did you make this contract under?

Colonel JOYES. As to the sale? My view of that matter at the time was this, sir—

Mr. STOLL (interposing). I do not want your view; I want to know what law you made this contract under.

Colonel JOYES. I am free to say I do not know. I made it pursuant to a practice which was established in the Ordnance Department, with the advice of lawyers and with the full consent and concurrence of my official superiors.

Mr. STOLL. Do you know of any law which gave your department the right to give a concern an option on the property of the Government for a period of six years, thereby foreclosing the right to the Government to sell that property?

Colonel JOYES. I expect I can give you one, sir. The law of July 9, 1918, I think, clearly does so, sir.

Mr. STOLL. That gives you the right to sell?

Colonel JOYES. Yes, sir.

Mr. STOLL. This is not a sale.

Colonel JOYES. In my opinion it would come very close to being a sale.

Mr. STOLL. No; it is an option extending over a period of years.

Colonel JOYES. It is an option, sir; and an option is the first step, I believe, toward a sale.

Mr. STOLL. But this is a contingent option extending over a period of years. Do you know of any authority which Congress gave you or your department to give a person an option for a period of six years to shut out the right of the Government to sell the property during that period of time?

Colonel JOYES. I am not prepared to say I do, sir, so specifically as that; no.

Mr. STOLL. Do you not think this is more of a case of the spider and the fly—the Alabama Power Co. spreading its beautiful net, and you all walking right into it?

Colonel JOYES. No, sir; I do not.

Mr. STOLL. To tie you up hands and feet?

Colonel JOYES. No, sir; I do not.

Mr. STOLL. It looks very much that way to me.

Mr. GARRETT. Where was this contract from the day it was executed, I mean the day it was agreed upon; where was the paper itself from that time until November 7, 1918?

Colonel JOYES. The contract with the Alabama Power Co.?

Mr. GARRETT. Yes; the contract with the Alabama Power Co. that was agreed upon back in November or December, 1917.

Colonel JOYES. It was signed in 1918, and I think it bears the date of December 1, 1917.

Mr. GARRETT. From December, 1917, until November 7, 1918, where was this paper; in whose possession was this paper?

Colonel JOYES. There was no such thing as this paper at all those times.

The CHAIRMAN. That is all in the hearings. We have gone over that, and it is all in the hearings.

Mr. GARRETT. I am just asking where that paper was during that time.

Colonel JOYES. I mentioned that in considerable detail on Friday, that during that period we were endeavoring to arrive at a definite statement of the relations; in other words, a contract. At first I met the officers of the Alabama Power Co. in Washington and with other people tried to arrive at an agreement. Then I delegated the authority to some other people to negotiate down in Alabama, either at the Warrior plant or in Birmingham, and tried to settle a number of these details there. That came back to Washington again, and it was continued on there. It was finally brought forward considerably toward an agreement, and then went into the hands of Col. William Williams, of the procurement division of the Ordnance Department, along about July or August, 1918. The negotiations from that time on took place in his office. He went into it in great detail and proceeded to chop it up with scissors and to get it into regular arrangement and form.

Mr. GARRETT. During all this time work was being constructed?

Colonel JOYES. Yes, sir.

Mr. GARRETT. Then, as a matter of fact, all of the work, or at least 90 per cent of the work done on the Alabama Power Co.'s premises, the extension of the Gorgas plant and the transmission lines, was done without any written contract; is that not true?

Colonel JOYES. Except this—

Mr. GARRETT (Interposing). Was that true or not; was the work done on any written contract?

Colonel JOYES. I believe I am justified in saying it was, to this extent, that I drew a purchase order to start the work, a written purchase order, requiring them to do thus and so, subject to later agreement as to terms of payment, etc. I signed that and it went out on the formal letterhead, and I have on that, I believe, an acceptance at the bottom, by the Alabama Power Co. If I am correct on that, and I think I am, those purchase orders bore my signature and the company's acceptance—two signatures at the bottom—which is, in effect, a contract.

Mr. GARRETT. What do you mean by purchase order?

Colonel JOYES. Those are in the record, in detail.

The CHAIRMAN. All three of the letters you read are in record?

Colonel JOYES. Yes, sir.

Mr. GARRETT. I know this is very wearisome, but you will remember, Mr. Chairman, that a Member who sits at the end of the table never gets a chance to ask his questions until the others are through, and he is placed at a disadvantage. If the Chair would alternate in calling upon the Members and begin at the tail end of the class once in a while, it would give us a chance to cover these questions without repeating so much.

The CHAIRMAN. The desire of the chairman is to get through with this. We have been running for four full weeks.

Mr. GARRETT. If the Chair will look at the record he will see that I have asked fewer questions than any other member of the committee. There are some things I want to find out, and if they are in the record already I do not want to duplicate them, but I do want to get the information.

The CHAIRMAN. They are in the record, because I heard them myself.

Mr. GARRETT. Did the Alabama Power Co. execute a bond to carry out this work?

Colonel JOYES. There was a bond given.

Mr. GARRETT. When was that executed, at the beginning of the work or at the end of it?

Colonel JOYES. I would rather have that absolutely verified and give it to you absolutely correctly in the record.

Mr. GARRETT. You do not know whether it was at the beginning or at the end?

Colonel JOYES. I would rather not say from memory; my memory is too unreliable on that, sir.

(Witness later stated that the bond was made directly after signature of contract.)

Mr. GARRETT. I want to ask you a question and see if I can get what I want to get from you in a very few words.

The Alabama Power Co., so far as the construction of this extension and the construction of the transmission line was concerned, never paid out a dollar except money that was furnished by the United States; is that true? I do not mean in the acquiring of any real property, but I mean as to the construction of the building and the transmission line. All of that was out of Government funds, was it not?

Colonel JOYES. I should say not in toto, sir. I mean that in this way, that the intent of the contract was that the Government should bear all of the expenses of such work, and it was carried out practically as intended.

Mr. GARRETT. That is a sufficient answer.

Colonel JOYES. I would not say that every cent was paid out of Government funds, for this, that, or the other thing.

Mr. GARRETT. I did not mean every cent they might have paid, for all purposes.

Colonel JOYES. There were incidental expenses that they had to spend money for, which I did not allow.

Mr. GARRETT. They were paid a fee fixed by the Government in the contract?

Colonel JOYES. Yes, sir.

Mr. GARRETT. This plant was built, then, upon their real estate?

Colonel JOYES. Yes, sir; their premises leased to us.

Mr. GARRETT. And they acquired real property upon which the transmission line was constructed?

Colonel JOYES. They did, sir.

Mr. GARRETT. Your contract provides that after the Government has done that, under section 22 of this contract, the day after it was completed the Alabama Power Co. could have demanded that the Government sell it to them, and the Government would have been required to have sold it under the contract, would it not?

Colonel JOYES. The day after it was completed—well, if they had done so at that time I think they would have had to pay us every penny we put into it.

Mr. GARRETT. I mean they had the right to compel that to be done, if they wanted to, at that time?

Colonel JOYES. I believe so, sir.

Mr. GARRETT. But the Government could not compel them to buy it before three years after the proclamation of peace by the President, could they?

Colonel JOYES. I think that is correct, sir.

Mr. GARRETT. If the war was still going on, you would have a contract in which you would be paying rent, and would have paid enough rent to have allowed the company to have paid for the plant long before this time, under the provisions of the contract?

Colonel JOYES. The Government is to pay no rent. The \$60,000 lump payment covered all United States use of contractor's premises, etc.

Mr. GARRETT. And still the Alabama Power Co. would have the right to demand a sale of this property by the Government, and the Government's hands would still be tied by the Alabama Power Co. if the war was still going on; and, as a matter of fact, its hands are tied because it has not been three years since the proclamation of peace by the President, and the Government is now tied up in that contract in that way, is it not?

Colonel JOYES. I think that is so sir.

Mr. GARRETT. That is all.

Colonel JOYES. I think that is correct. I realize that is one feature that may well be open to criticism as being unfavorable to the Government. I think the reason for putting that in there was that there would be a certain period of time after the close of the war when things would be rather involved and difficult, both in connection with financing and the recovery of business, etc., and that was about the expectation we had at the time, that it would be but fair to allow anybody whom we would require to make a purchase a little time for business to readjust itself.

Mr. GARRETT. At whose suggestion was that made?

Colonel JOYES. I am very sorry I am unable to say at whose suggestion it was made. I think, in all probability, it was at the suggestion of the Alabama Power Co.; I think so, sir.

Mr. GARRETT. Colonel, there has been a good deal of discussion here in this testimony to the effect that you did not know, or whether or not there was a good deal of discussion in your conferences as to your power to do the various things that were done in regard to this matter. Did the people in your conferences ever discuss the resolution declaring war against the German Government, and in that resolution did they fail to see the language in which Congress pledged not only the resources of the Government but every resource of the Nation to the winning of that war? Did anybody ever raise the question as to whether or not that superseded any peace-time statute that might be in the way of military activity, or did they just wait for some law to be passed?

Colonel JOYES. I am not able to speak for what other people thought of, sir, but I know perfectly well that there was a general feeling expressed that the declaration of war did give a certain latitude to the Executive and to the officers who had to work under him, that it called for them to—

Mr. GARRETT (interposing). It gave the President power to call all the men in the country to arms, did it not?

Colonel JOYES. No, sir; I do not think so, sir. If you will remember, there was a great deal of discussion at that time, and there was great reluctance in getting the selective draft adopted. There was no universal draft—never was—because you would not give it to us.

Mr. GARRETT. We had the selective service law?

Colonel JOYES. If you had given us the universal draft—a universal draft of man power and of money power—there never would have been any such fool contracts, as many of the fool contracts that have been written, and many of them are fool contracts.

Mr. GARRETT. Do you say this was a fool contract?

Colonel JOYES. This has been spoken of as a fool contract, and I do not blame you, with your perspective on it at this time for calling it that. I do not call it that; I call it a fairly good provision to meet a very difficult situation which we were put into from the lack of law; that is my opinion. Many another man has felt the same way about it and has said it in much stronger language than that.

Mr. GARRETT. Your idea is that you were without authority, and this is the best contract that could be made because of the lack of more authority.

Colonel JOYES. That is right; that is my opinion, sir, whether that lay in the law or not; but it is my opinion, and the situation I found myself in, as many another man, also, sir. This is not an unprecedented contract at all. You are

talking of this contract as though I was the only man who presumed to do that sort of thing.

Mr. GARRETT. I am not presuming anything at all. This is the contract we have before us. We have not the other contracts before us; and this is the one that we are discussing. If the other contracts were before us, of course, they would be up for discussion, but they are not here.

Colonel JOYES. With your tolerance, I mention it for this one reason, that I think this was not a particular provision in this contract which you have up for your consideration; and if you choose to consider it and inquire into the propriety of my action, I think you should consider in connection with the propriety of my action that there were other contracts that did the same thing, prior to and after I did it, prior to and after the writing of this contract.

Mr. GARRETT. You mean section 22; that is the troublesome section of this contract? You mean there are other contracts that contain the exact language of section 22?

Colonel JOYES. Absolutely not; no two contracts have exactly the same identical language, but the same essential provisions, sir.

Mr. GARRETT. The other contracts you speak of gave the contracting party the right to demand of the Government that the Government sell at any time, and in those contracts the Government waived the right—

Colonel JOYES (Interposing). The Government never waived any right to anything.

Mr. GARRETT. In such an optional contract as this one the contractor would have the right to demand the sale immediately, but yet the Government could not demand purchase by the contractor until some other time, after the signing of the armistice. Have you any other contract just like that?

Colonel JOYES. Why, I am unable to cite you that particular thing, sir, but I am not so sure that I can not do it.

(The witness, after consulting the records, subsequently submitted the following citations from contracts:)

1. Contract dated March 1, 1918, between the Ford Motor Co. and the United States, by the Secretary of the Navy, covering the manufacture of 100 patrol boats, contains the provision in the sixteenth clause, for construction and equipment by the contractor of "buildings, building slips, plant, and other special facilities," the total actual cost of which not to exceed \$3,500,000, was to be paid to the contractor by the United States as expenditures therefor were incurred; title to all such special facilities paid for by the United States to vest in the United States. The contract further provided in the twentieth clause that upon completion of work under the contract, a compensation board of Navy officers should appraise all such facilities in two parts; the first part including all buildings, building slips, and appurtenances not susceptible of removal without destruction; the second part including plant and other facilities which are readily removable. This clause then proceeded to allow the contractor the specific option of purchasing at such appraised price or of refusing to purchase, although the word "option" did not appear.

In the event that the contractor "shall refuse to repay the amount of the appraisals, or either of them, the department shall have the right to enter upon the contractor's works and remove such parts as shall not have been accepted as are readily removable and to wreck such parts as are not susceptible of removal for their salvage value, provided that any damage done in the process of wrecking to the contractor's own property shall be made good by the department."

A careful reading of this contract does not disclose any special provision covering title to the land upon which Government-owned facilities were to be erected, but from the context it is patent that the structures were to be upon land owned by the contractor. There is no time limit upon contractor's decision.

I am informed that a supplemental contract increased the amount liable to be spent for increased facilities and also that in the final settlement of the contract the Ford Motor Co. was granted title to practically all the facilities provided by the United States, making for some of those facilities payments approximately 70 per cent of cost, for others payments at various prices ranging from 70 per cent down to nothing, and some small portion of the facilities being actually turned over to the Ford Motor Co. without compensation to the United States.

I am informed, although I have not verified the fact, that provisions quite similar to the foregoing were used in a number of Navy Department war contracts.

2. Contract No. CS 105 made by the Chief of Ordnance with the Morgan Engineering Co., of Alliance, Ohio, for eighty 12-inch mortar carriages, model of 1918, dated January 26, 1918; execution completed June 17, 1918:

* * * * *

The contractor agrees to provide at the best prices obtainable upon land now owned by the contractor, indicated upon Schedule 2 and described as follows, to wit, * * * the following:

Suitable temporary factory building of approximately 210,000 square feet floor area, at a cost not exceeding \$1,150,000, in accordance with the plans and specifications referred to in Schedule 3, hereto attached, being a copy of a certain approved contract by the contractor and George A. Fuller Co.

And the United States Government, through the contracting officer, agrees to pay the contractor the actual cost of such temporary buildings weekly from time to time as the work of construction progresses upon statements of work done, furnished by the contractor weekly during the progress of the work and approved by the contracting officer.

The above mentioned plans and costs include all cost and charges incurred by the contractor for the purpose of providing complete buildings ready for the installation of the necessary machinery without additional foundation, but with railway tracks and sidings to the buildings aforementioned and adjacent storage yards used in connection therewith.

The United States Government agrees to pay all State or local taxes levied or assessed upon such buildings and the land occupied by such buildings, storage yards, etc., during such period as said buildings may remain upon said land and be the property of the United States.

Payment of these items to be made by the contracting officer to the contractor after such payment has been made by the latter, provided that such payments of taxes shall be in lieu of any and all rental charges for the use of said land.

It is distinctly understood and agreed that said buildings, tools, and equipment are and shall remain the property of the United States Government, and that said United States Government will remove or cause same and every part thereof to be removed from the property of said contractor, and leave said property in the same condition as before said buildings were erected thereon, without cost or charge of any kind to said contractor, within one year after peace is declared with the German Empire, provided that if the United States shall desire to sell said buildings without removing them, then the contractor shall have the first right to purchase same at the highest price which the United States may be able to obtain for same, and provided further that the time of removal of said buildings may, at the option of the United States, be further extended until one year after the completion of such contracts as may be entered into between the contractor and the United States either before or after the end of the present war.

The contractor, by and with the assistance and approval of the contracting officer, will purchase at the best prices obtainable (or will manufacture) cranes, tools, equipment, shop furniture where necessary and possible, and office furniture and equipment necessary for the purpose of operating the plant to be operated in said buildings under the terms of this agreement, and not to exceed in cost the sum of \$1,800,000. The contracting officer agrees to pay the contractor monthly, or oftener, the cost of all such machinery, tools, and equipment aforementioned as same may be purchased or manufactured from time to time by the contractor, upon bills furnished by the contractor for such purchases.

* * * * *

It being hereby agreed that for such machinery, tools, and equipment as the contractor may himself manufacture in the present plant he shall be paid the following prices: All cost of (1) direct material entering into the construction of such articles; (2) cost of all direct labor entering into the construction of such articles; (3) percentage of overhead obtaining at the time of manufacture as shown by the cost records of the contractor; (4) 10 per cent upon the sum total of the foregoing three items.

All such tools and equipment aforementioned to remain the property of the United States Government and to be removed by the United States Government from the property of the contractor within the period provided for the removal of the buildings aforementioned.

3. Contract No. CF 339 made by the Chief of Ordnance with Dodge Bros., of Hamtramck, Mich., for 4,544 recoil mechanism; complete, dated November 1, 1917; execution completed November 13, 1917:

ARTICLES CONTRACTED FOR.

ARTICLE I. The contractor agrees to make for the United States the following articles: (a) 3,120 recoil mechanism, complete, for 155 mm. Howitzer (Schneider); (b) 1,424 recoil mechanism, complete, for 155 mm. G. P. guns (Filloux).

ART. II. Time being of the essence, the contractor agrees to provide, with the utmost dispatch, at the best prices obtainable, upon land now owned by the contractor, described as follows, to wit: * * * the following:

1. Suitable factory buildings of approximately 500,000 square feet floor area, at a cost not exceeding \$1,500,000 as per plans and specifications hereto attached marked Schedule 2.

And the United States Government, through the contracting officer, agrees to pay the contractor the actual cost of construction of such buildings monthly from time to time as the work of construction progresses, upon estimates of work done, furnished by the contractor monthly during the progress of the work, and approved by the contracting officer plus the sum of 5 per cent on the actual cost of said buildings as a charge for organization equipment, building equipment and supervision furnished by the contractor in the construction of said buildings. Said charge of 5 per cent to be paid by the contracting officer to the contractor upon the final completion of said buildings.

And the United States Government, through the contracting officer, also agrees to pay all costs and charges incurred by the contractor for the purpose of procuring railway tracks and siding to the buildings aforementioned and adjacent storage yards used in connection therewith, and also all State or local taxes levied or assessed upon such buildings and the land occupied by such buildings, storage yards, etc., during such period as said buildings may remain upon said land.

Payment of these items to be made by the contracting officer to the contractor within one month after such payments have been made by the contractor.

Such payments of taxes to be in lieu of any and all rental charges for the use of said land.

It being also understood and agreed that any sums which may hereafter be refunded by the railroads on account of such trackage aforementioned, shall be paid to the United States Government.

It being distinctly understood and agreed that said buildings are and shall remain the property of the United States Government, and that said United States Government will remove or cause same and every part thereof to be removed from the property of said contractor, and leave said property in same condition as before said buildings were erected thereon, without cost or charge

MUSCLE SHOALS PROPOSITIONS.

of any kind to said contractor within six months after peace is declared with the German Empire, provided that if the United States shall desire to sell said buildings without removing them, then the contractor shall have the first right to purchase same at the highest price which the United States may be able to obtain for same.

1. Contract No. CF 420, made by the Chief of Ordnance with Mesta Machine Co., of Pittsburgh, Pa., for 9,000 tons of artillery forgings, dated January 11, 1918; execution completed March 21, 1918:

* * * * *

2. The United States will pay to the contractor the actual cost of increased facilities as specified in Schedule B to an amount not to exceed \$592,429.

* * * * *

4. Six months after the receipt of written offer of sale from the Chief of Ordnance, but not later than six months after the termination of the war between the United States and the Imperial German Government or its allies, the contractor agrees to purchase and the United States agrees to sell the additional facilities called for in this contract belonging to the United States at a price of \$242,458. In any event, however, the contractor shall not be required to pay for such facilities prior to December 31, 1918.

5. In the event of the termination hereof, the United States agrees to either complete the additional facilities and sell them to the contractor, as specified above, or to restore the contractor's plant as it was originally before alterations were made for the addition of the additional facilities.

* * * * *

3. It is further agreed that the United States may accept, in full satisfaction of this contract, such lesser quantities of the articles herein contracted for as the contracting officer may designate; but in this case the contractor's obligation to purchase additional facilities at the price specified shall cease, unless the United States shall place orders with the contractor for other articles that can be produced by these facilities equal in value to the value of the portion of the contract canceled.

JOHN J. BOOTON,
Major, Ordnance Department.

Mr. GARRETT. I think you will agree with me, under this contract, who else could buy this property from the Government except the Alabama Power Co.?

Colonel JOYES. Nobody. But there was many another contract that contained that same provision, in that same situation. I have five of them on the table.

Mr. PARKER. So far as not already in the record, please insert everything in the way of correspondence, which constitute a part of the material which you have handed to Colonel Williams.

Colonel JOYES. The material I handed to Col. William Williams?

Mr. PARKER. Yes. It consisted largely of correspondence between you and the Alabama Power Co.; and, so far as it is not in the record, I want it put in. Second, please, at your leisure, state why—

Colonel JOYES (interposing). I expect—

Mr. PARKER (interposing). I am not asking you to answer the question now. Please, at your leisure, state any reason why the Alabama Power Co. ought not to pay interest on the cost when they have possession of the plant and are operating it.

The CHAIRMAN. If you will kindly insert the answers to those questions at your leisure, that is all we will require this morning, Colonel. We are very much obliged to you.

(The matter, above referred to, is as follows:)

[Memorandum to Procurement Division in re proposed construction and operating contract with Alabama Power Co.]

SEPTEMBER 5, 1918.

1. In order to obtain, through the medium of the Alabama Power Co., an auxiliary power station for the power requirements of the Nitrate Division, Ordnance Department, it became necessary first to construct a power station and transmission line with Government moneys; and, second, to contract for the operation and ultimate disposal of such properties.

2. The construction and the work orders, under which the same has proceeded, are covered by the first portions of the attached tentative contract, dated May 20, 1918, and the schedules A, B, and C, relating thereto.

3. All materials and apparatus are covered by purchase orders, approved or authorized previous to August 31, except certain as yet unauthorized work, which, however, is mentioned in schedules A, B, and C.

4. The construction of the Drifton Branch Railroad extension, approximately 8,000 feet of new line, was not included in the above draft of contract, and no work or purchase thereon has occurred. The Alabama Power Co.'s representatives have agreed to provide the right of way and materials and to perform that work under this contract with an upset price to the United States of \$30,000, plus the cost of the track-rail material. The future maintenance of such extension to be at the cost of the Alabama Power Co., but performed, if desired, by the United States by the Railroad Administration. (Embody this in schedule C.)

5. The operating section of the contract to be along the following lines:

6. The 30,000-kilowatt unit and other facilities to be installed at Warrior at the expense of the United States. Also transmission line to nitrate plant No. 2. Both on property and right of way of Alabama Power Co.

7. The power company shall pay the United States as annual rental for the use of the facilities provided by the United States hereunder, an amount equal to 6 per cent of the cost to the United States of the proposed facilities (exclusive of transmission line) during such periods as the United States may require from the service contemplated under this agreement; such rental payment to be made in equal monthly installments.

8. In determining the amount on which the power company shall pay interest, there shall be deducted from the amount of the expenditure by the United States for the construction of the Warrior extension the amount of the accumulated recapture fund in the hands of the United States resulting from the proposed retention of 2 mills per kilowatt-hour, under the provisions of the contract, and interest charged on the net of such advance after such deduction, interest computation to be made semiannually on the 1st day of January and July of each year.

9. Power company to operate the power plant at Warrior and to supply current for operation of United States nitrate plants No. 1 and No. 2, near Sheffield, Ala., at 7 mills per kilowatt-hour, delivered to the switchboards at such plants, 110,000 volts, 3-phase, alternating current. The amount of energy available to the United States for such operation is to be that corresponding to the capacity of such unit and any other power which the power company may have available for such use.

10. The use of current by the United States should not be confined to "Sheffield" nor to "near Sheffield," since, for example, the proposed quarry operation will probably be near Russellville, some 30 miles to the south.

11. During such periods as the United States shall require the service from the power company above provided the United States shall guarantee a minimum payment for current to be supplied pursuant thereto of \$30,000 per month.

12. The United States may discontinue the demand for such service on 90 days notice at any time, in which event the United States shall, during the period of such discontinuance of demand, be relieved of the obligation as to minimum monthly payment hereunder, and the power company shall correspondingly be relieved of the payment of rental for the facilities of the United States during the period of such discontinuance of demand for service. Unless the period of any such discontinuance of service exceeds 60 days, there shall be no change in the minimum payment or rental charges.

13. Such service to be restored on 60 days written notice by the United States, after which the minimum payment and rental charges shall become effective.

14. Rate for use of 30,000 kilowatt units for purposes of Alabama Power Co. during periods of suspension of service to the United States, under provisions of contract, to be $1\frac{1}{2}$ mills per kilowatt-hour generated by such unit. Boilers installed at expense of United States to be used only to supply steam to the 30,000-kilowatt unit.

15. The 30,000-kilowatt unit and other facilities and transmission line and substations to remain the property of the United States, but of the above payment of 7 mills per kilowatt hour the amount of 2 mills per kilowatt hour is to be retained by the United States.

16. When the amount so retained by the United States aggregates the amount of the cost to the United States of the 30,000-kilowatt unit and other facilities provided at the expense of the United States, and installation expense thereof exclusive of the transmission line and Sheffield substation, then the title to the 30,000-kilowatt unit and other such facilities, except the transmission line and Sheffield substation to pass to the power company.

17. The United States to have the option at any time not less than three years after the termination of the war or termination of the supply of power hereunder, whichever may be the later date, to elect that the power company shall take over the 30,000-kilowatt unit and other facilities provided at the expense of the United States at a value to be determined by appraisal, such appraisal to take into consideration the value of the property to the power company under the then conditions. The power company to have a reasonable period to make payment of the amount due on account of such sale, not less than five years or more than 10 years; deferred payments to bear interest at the rate of 5 per cent and title to property to remain in the United States until paid for in full. Credit to be given power company for amounts retained under provisions of 15.

18. Power company to have five years in which to repay amount due under appraisal at 5 per cent interest, payable semiannually, with an option for five years additional at 6 per cent interest. Company may anticipate payments at its option.

19. Power company to assume full operating responsibility for the operation of the plant and to maintain apparatus in first-class operating condition, and shall make good any damages due to use, accident, or otherwise.

20. Power company to agree to continue to supply power for the requirements of the United States at reasonable prices, taking into consideration capital investment, operating costs and reasonable depreciation, after recapture of property by power company.

21. If the United States is prepared to furnish coal to power company at a price lower than that on which energy rate is based, under adjustment clauses, power company will accept such coal, on reasonable notice with reference to power company's obligations to accept coal from other sources. Energy rate to be adjusted correspondingly for power generated by coal so furnished by United States.

22. Energy rate based on standard coal at \$2.30 per ton. Adjustment up and down for variations in coal cost.

23. Contract to become effective on 30 days' written notice by the United States, such notice to be given not later than December 1, 1918, provided the proposed facilities at Warrior are completed for operation at that time.

24. Temporary power to be furnished in the meantime on basis \$12.50 per month per 1,000-kilowatt maximum demand, plus 5 mills energy charge, as provided in contract draft May 20, 1918.

25. Transmission line to be maintained by power company but policing transmission line to be at expense of United States.

Col. J. W. JOYES,

Ordnance Department, United States Army.

[Memorandum.]

In reply to Judge Parker's question as to why Alabama Power Co. should not have been required to pay interest on cost, I would say that we thought the company should pay interest and contract aims to require interest, as follows:

Whenever United States has a "demand" right for power, the contractor must pay monthly interest at 6 per cent per annum on entire cost. As facilities were for the United States requirements and as United States interests prevented contractor's agreeing to sell power regularly from Warrior extension it was felt to be only fair to remit such payment when United States suspends its purchases of power. But, in that case, contractor must pay $1\frac{1}{2}$ mills for each kilowatt hour which it generates itself, for its uses, by the operation of the Government's facilities. This $1\frac{1}{2}$ mill would amount to more than 6 per cent per annum if the contractor used the facilities to their full capacity continuously.

Payment for full use facilities below: 365 by 24 by 30,000 at \$0.0015, \$394,200. Interest at 6 per cent on \$3,851,880.99, \$231,112.86.

Interest on cost of Warrior extension, Warrior substation, and Drifton Railroad:

Furthermore, the contractor is required at all times to maintain the properties in first-class repair, to keep them insured, and to make good all damages, etc.

In returning the proof of the record of my testimony in hearings before your committee on Friday, March 10, and Monday, March 13, 1922, I believe it necessary to submit the following brief statement as to my general attitude and opinion in regard to the contract with the Alabama Power Co.

The trend of previous hearings and of the questions propounded to me naturally led to presentation of facts and some argument by me in support of the legality and justice of the contract, such as might possibly be misconstrued into an advocacy of the interests of the Alabama Power Co.

Such an advocacy of this or any other interest in opposition to that of the United States Government is far from my intent. On the contrary, I believe that the legal rights and proper equities of the United States should be paramount, and that in the contract are to be found the best means of enforcing such rights and protecting such equities of the United States.

I therefore advise that the contract be respected and enforced and urge that the policy of the Government be to secure in the manner prescribed in the contract the most advantageous settlement possible.

Respectfully,

J. W. JOYES,

Colonel, Ordnance Department, United States Army.

**STATEMENT OF DR. CHARLES L. PARSONS, CONSULTING CHEMIST,
WASHINGTON, D. C.**

The CHAIRMAN. We will now hear Dr. Parsons. Will you kindly state your name in full, also your address, your present business, and what position you occupied during the war?

Doctor PARSONS. I am Charles L. Parsons, and my address is 1709 G Street, Washington, D. C. I am a consulting chemist. During the war I was quite closely connected with the whole nitrogen situation and a number of other matters that were handled by the Bureau of Mines of the Interior Department. I was chief chemist and chief of the division of mineral technology of the Bureau of Mines. In the summer of 1916 I was transferred to the War Department at the request of General Crozier as their chief chemical engineer to go to Europe and investigate the whole question of nitrogen fixation and to report back to him my conclusions. After that I was made a member of the

nitrate commission, consisting of Admiral Earle, Dr. W. R. Whitney, Dr. A. A. Noyes, Dr. Gano Dunn, and I think the other member was Mr. E. E. Sumner, of the War Industries Board. I am not quite sure of that, but I have the list exact, if you desire it.

I was consulted in connection with technical matters with reference to new plants after plant No. 2 was installed at Muscle Shoals, when such matters were referred to the commission for advice. I was also with the interdepartmental committee, consisting of the Secretaries of Interior, Agriculture, and War, at the time they took their special trip through the South to view the various localities proposed for the first nitrate plant, which should be referred to as plant No. 1, and the trip had nothing to do with plant No. 2. Afterwards I was in constant consultation with them, and was on the various boards that had to do with these matters.

I am, of course, more especially informed on the technical side, or the chemical side of the situation. I do not think I can give you any testimony which would be worth while on water powers or law or contracts. While I will be very glad to reply to any question of fact, of which I have knowledge on those matters, I do not think I could give you an opinion, as you have already had men before you who are much more expert on those matters than myself.

There is one thing that I ought to mention. I have been, I think, before every committee that has had this matter up for consideration. I was, after I left the Bureau of Mines in the latter part of 1919, connected in a consulting chemical capacity with the Atmospheric Nitrogen Corporation, whose plant is now operating at Syracuse; I remained with them in a consulting capacity until August 15, 1921, when their plant was in full, successful operation, and my connection with them ceased with the understanding that I was entirely free thereafter and I am before you as a free lance, without anyone influencing my testimony.

The CHAIRMAN. That plant at Syracuse is the one that has been referred to as the fixation plant No. 1, which is different from the plants operated by the cyanamid process?

Doctor PARSONS. You are correct.

The CHAIRMAN. What is the name of that process officially?

Doctor PARSONS. It is generally spoken of as the General Chemical Co.'s process, or, if you wish to go back to a more general term, it is a modification of the Haber process. There are three modifications of the Haber process, which differ slightly, and which I will explain.

The Haber process was first developed in Germany. When the war began they were making 7,000 tons of fixed nitrogen per year by the Haber process there. Their patents called for operation under pressure from 100 atmospheres to 300 atmospheres, or to put it in pounds, from 1,500 pounds per square inch to 4,500 pounds per square inch—very high pressures.

The process consists in the direct combination of nitrogen and hydrogen to form ammonia, and the greatest difficulty in the process to-day is to procure the hydrogen and to procure it cheap. Modifications of that process have been devised, but information could not be obtained in 1917 from Germany which would enable us to put in the German process *per se*.

The General Chemical Co., in order to be free from the German patents, devised a process which worked at a pressure of 1,500 pounds per square inch. In France Claude has devised a process which works at pressures greater than 300 atmospheres, in fact, he works at pressures of 900 atmospheres, which would be nine times 1,500 pounds per square inch—a very, very high pressure. He is working on a comparatively small scale, but successfully, in France. Otherwise those processes are much alike, and they are often spoken of in the general term as the Haber process. It is really the synthetic ammonia process, of which there are three modifications used in the world to-day. They are replacing the other processes, and, so far as we can now see, within a few years this will be the only process used for nitrogen fixation.

The CHAIRMAN. Did you do anything at Muscle Shoals with regard to nitrate plant No. 2?

Doctor PARSONS. With reference to nitrate plant No. 2 I was called into the first conference held in General Crozier's office, and the details of that conference are set forth in the records of Mr. Graham's committee. I differed from nearly everyone else there that night as to the advisability of installing plant No. 2 at all. I went back the next day and wrote a letter to General Crozier giving my full opinion and reasons therefor and mailed it to him, and after that I had nothing to do with plant No. 2.

The CHAIRMAN. What was your objection to that plant?

Doctor PARSONS. My objection to that plant was that it was a process that was becoming obsolescent. I did not feel at that time we had reached a stage where the installation of the plant was necessary for war purposes. I believed we could procure our immediate needs from the ammonia produced by the destructive distillation of coal, of which we are making something like 100,000 tons every year, and at that time, if I remember correctly, about 70,000 tons, and I thought that ammonia could be diverted temporarily without injury to the other industries of the country and could be oxidized and made into the nitric acid that we might need for any short period of emergency. So I favored installing at first the process of the General Chemical Co., a modification of the Haber process, and installing it as a small unit so we could determine how it would operate and the necessary details for its operation. I will have more to say about that later.

The CHAIRMAN. What did General Crozier say with regard to that matter?

Doctor PARSONS. He accepted the advice of the Ordnance officers and went ahead with plant No. 2. If you wish the letter I wrote him at that time it is in these hearings on the Muscle Shoals development, and I can read it to you, or you can put it in the hearing, or simply refer to it.

The CHAIRMAN. Is it very long?

Doctor PARSONS. It is approximately one page.

The CHAIRMAN. Will you kindly read it? What hearing is that which you are about to read from?

Doctor PARSONS. This is a hearing on the sundry civil appropriation bill for 1922, on the Muscle Shoals (Ala.) development.

The CHAIRMAN. That must have been this year.

Doctor PARSONS. The hearing was last year.

The CHAIRMAN. What committee did you appear before?

Doctor PARSONS. I appeared at Chairman Good's request before the subcommittee on the sundry civil appropriation bill, at the time the government-operated nitrogen corporation was being considered.

The CHAIRMAN. Was that in 1922?

Doctor PARSONS. That was on the appropriation bill for 1922.

Mr. PARKER. What date did you appear?

Doctor PARSONS. On Wednesday, February 16, 1921.

The CHAIRMAN. Will you kindly read the letter?

Doctor PARSONS [reading]:

DEPARTMENT OF THE INTERIOR,

BUREAU OF MINES,

Washington, October 31, 1917.

CHIEF OF ORDNANCE, WAR DEPARTMENT.

DEAR GENERAL CROZIER: Referring to the conference in your office Monday evening regarding the necessity of building additional ammonia plants for the production of ammonium nitrate for shell filler, I have given further careful thought to the arguments presented.

Basing my conclusion on the premises that 600,000,000 pounds of shell filler are required for the year beginning September 1, 1918; that the necessary forgings can not be obtained for increasing the size of the ammonia plant to use the process of the General Chemical Co.; and that picric acid by the chlorbenzol process can not be produced in sufficient quantity to meet the deficiency, I agree that it may be necessary to install plants for the production of cyanamid and ammonia. I believe that a thorough canvass of the picric acid situation and the ability to divert 50,000 tons of ammonia from coke plants should first be made. I am strongly of the opinion that the cost figures for the production of ammonia as presented in the estimates of Mr. Washburn can not be attained with water power at 1 cent per kilowatt hour and the heavy amortization charges required on the proposed plant.

While it may be necessary in the present emergency to resort to every known process for the production of ammonia, including the cyanamid process, as was done in Germany. I can not feel that the time has arrived when the country is driven to the strait of accepting any such proposition as that proposed by Mr. Washburn, president of the American Cyanamid Co.

Mr. Washburn proposed to furnish the technical advice and engineering experience, the patent rights, and the good will of his company at cost, to build, at Government expense, a plant to produce from 500 to 1,000 tons of ammonia per week at a cost for the larger amount estimated at \$16,000,000, including

electricity transmission lines. He contemplates no personal expenses, financial risk, or guaranty, and is reimbursed for the time and expense of his employees. He claims to charge no royalty during the period of the war, or for three years in case the war ends sooner. He agrees to furnish the electricity at 1 cent per kilowatt-hour, or approximately \$64.50 per horsepower-year. On the electricity he presumably makes a profit, how great is unstated—but his first estimate was 7 mills per kilowatt-hour, as given to Captain White.

His proposal contemplates his ultimate, if not immediate, ownership of the plant, without cost of any kind to himself or his company. This is to be accomplished by charging against the ammonia produced during a three-year period an amount sufficient to amortize the total construction costs of the plant, which is, of course, to be kept in proper operating conditions.

Plant costs at the present time are excessive, but deducting 50 per cent of the estimated cost of plant as a proper loss to the Government to cover emergency conditions, there remains \$4,000,000 on the 500-ton plant, or \$8,000,000 on the 1,000-ton plant of actual plant value under normal conditions. These figures correspond almost exactly to the \$200 per ton nitrogen capacity per year construction costs given by the American Cyanamid Co. to the nitrate committee as a proper estimate for the construction cost of a cyanamid plant, not counting water-power installation, on prewar conditions—conditions which will probably never be reached in this country again.

Even admitting for the sake of argument the correctness of the construction estimates, I have no faith in the estimates for ammonia product on costs as presented previously by him or as proposed in this latest communication. I have no hesitancy in saying that the ammonia costs will be considerably higher than estimated and that ammonia by the cyanamid process has never been made by any other manufacturer of cyanamid at anything like these figures, allowing for present prices for power, labor, and other raw materials. I wish to place myself on record as stating that they will be exceeded if the Government builds a plant and it is operated by the Government or by the American Cyanamid Co. as proposed.

I ask particularly that you note the following:

1. That the American Cyanamid Co. will obtain through ownership of the plant a profit equivalent to from \$4,000,000 to \$8,000,000 at the lowest estimate for the three-year use of their process, without financial risk to themselves or guaranty or responsibility of any kind whatsoever.

2. The basic patents for the cyanamid process will soon run out.

3. The above profit is equivalent to a royalty of \$50 per ton of ammonia produced, or approximately \$40 per ton of nitrogen, including that used for munitions.

4. That the royalty on the synthetic process is nothing on munitions and only \$5 per ton on nitrogen if the product is used for fertilizer.

5. That profits on electricity sold will be paid to Mr. Washburn and his associates. The extent of this profit is unknown.

6. That a probable 10 per cent profit will have to be paid to some construction company that builds the plant.

7. Most important of all, Mr. Washburn's proposal plans to leave the cyanamid industry in his hands after the war is over for the production of fertilizer. It plans unquestionably, since he wishes it located at Muscle Shoals, to force the Government to subsidize the continuation of a process which has never commercially found place in the United States, by granting to its horsepower in quantity far below the market price of horsepower anywhere else in America, thus rendering possible a continuation of a process which can not hope to exist commercially in full and free competition with more modern processes for nitrogen fixation. I believe in the development of water power at Muscle Shoals, but not for the benefit of the American Cyanamid Co. or for purposes of nitrogen fixation, which can be accomplished much cheaper otherwise.

If the cyanamid process must be resorted to it should be remembered that the process is an old process, well known to many engineers both in this country and abroad; that the larger part of the process consists in the production of calcium carbide; that the Union Carbide Co. and other carbide companies are equally able, if not better able, to construct this portion of the plant; that engineers can readily be obtainable, probably in this country, but certainly in Norway, to plan, construct, and operate cyanamid plants and plants to

convert this cyanamid into ammonia; that the basic patents are soon to run out, and any patent suit against the Government would undoubtedly be settled at a comparatively low figure; that electric power to the extent of about 20,000 horsepower can be purchased at Keokuk for \$20 per horsepower year, and in the far West is available and can be purchased in quantity at approximately \$12 per horsepower year; and that power can be produced by steam plants for from \$40 to \$45 per horsepower year.

I, therefore, can see no reason other than the establishment of a cyanamid monopoly favorable to the American Cyanamid Co. for locating this plant at Muscle Shoals at a present horsepower cost of \$64.50 per horsepower year. This is particularly true when it is remembered that the cost of horsepower is one of the chief controlling factors in the cost of the product.

I do not understand that it is your expectation or plan to accept the proposal as made, but I feel very strongly that if it has become necessary to erect plants for the production of ammonia through cyanamid these plants should belong to the Government. If operated for fertilizer purposes after the war the Government would then be in a position to direct the use of this plant so as to preclude individual subsidy.

I trust you will pardon the length of this communication, but I feel it my duty to place before you clearly my conception of the action proposed.

Yours very truly,

CHARLES L. PARSONS.

The CHAIRMAN. When was that written to General Crozier?

Doctor PARSONS. On the 31st day of October, 1917. That was the day after the first meeting that was held in his office. I was there until 2 o'clock in the morning, and you will find the details of that in the other hearings. I never had anything to do with that nitrate plant after that. Mr. Washburns' proposals were greatly modified, and they got very much better terms before they finally signed the contract, as you know. But the fact remains that what I felt then about the reliability of the cyanamid process as a process for the fixation of nitrogen not only exists to-day, but every prophecy I made there has been fulfilled.

The CHAIRMAN. Did General Crozier reply to that letter?

Doctor PARSONS. I am not sure; he may have acknowledged it, but it was no more than an acknowledgment.

The CHAIRMAN. Do you know whether Secretary Baker saw your letter?

Doctor PARSONS. I do not know; no. I know Secretary Baker knew of my feelings in this matter.

The CHAIRMAN. How did he know that; did you have conferences with him?

Doctor PARSONS. I had frequent conferences with him; we went on the trip together in a private car when we went on the first inspection trip to Muscle Shoals, and we were out some 10 days together, and I was quite closely in touch with him and had letters from him and sent letters to him on nitrogen fixation matters during the war. Secretary Baker's attitude, in my opinion, was entirely correct from the beginning to the end of the situation.

The CHAIRMAN. Did he agree with you on these matters?

Doctor PARSONS. Secretary Baker agreed, in that he accepted, as did the other two Secretaries, the report of the committee which the committee submitted, and which was practically the report which I made to the Ordnance Department, and the interdepartmental committee unanimously were for the report and were for the location of the plant at North Chattanooga, on the basis that no great amount of power was needed for nitrogen fixation. Plant No. 1 was ordered to Muscle Shoals by the President, as has been clearly brought out in the previous hearings, the details of which you will find not only in the hearing referred to but in the hearings held by Mr. Graham's committee on war expenditures.

The CHAIRMAN. Did the President order the work to begin down there in the letter of his of February 18, 1918?

Doctor PARSONS. I think it would be better, if you want that data, to get it exact on the report of the interdepartmental committee to General Crozier, suggesting that the report be accepted and that the plant be put at North Chattanooga. General Crozier wrote about 10 days after the receipt of that report that the whole project had been sent to Muscle Shoals by the President's order. You will find the detail in Mr. Graham's hearing. It is referred to in these hearings and the pages given.

The CHAIRMAN. You can put that into the hearings when you look it up.
 Doctor PARSONS. The page reference?

The CHAIRMAN. Yes.

Mr. MILLER. The reference to where it can be found in the hearings of Mr. Graham's committee.

Doctor PARSONS. I will do that.

The CHAIRMAN. The President, then, gave orders to proceed with the work at Muscle Shoals as a war proposition, did he not?

Doctor PARSONS. I do not so understand it. The order was first given in reference to plant No. 1, and it was under the national defense act. He ordered plant No. 1 to Muscle Shoals, when all the boards had favored the location of it elsewhere. That was some few months before plant No. 2 was decided upon at all. When the Ordnance Department decided upon building plant No. 2, it naturally followed after, because plant No. 2, if it were to have any success at all, required for its operation considerable power. There was no power developed at Muscle Shoals at that time. During the war they had to get power from a rapidly built steam plant or from some power company that might furnish it. It was generally understood that by ordering it to be built at Muscle Shoals the power at Muscle Shoals would be developed.

The CHAIRMAN. Was the Wilson Dam begun about that time also in connection with the Muscle Shoals development?

Doctor PARSONS. I am afraid I have not those dates clearly in mind, but the Wilson Dam, as I understand it, was not started for some time afterwards. I think it was approximately a year after, but that can be easily ascertained.

The CHAIRMAN. Is it not a fact that when the President ordered that work started it was investigated as to whether the completion of those dams could be considered a war emergency, and Mr. Barney Baruch, who was then at the head of the War Industries Board, decided it was not a war emergency, and ordered the work on those dams stopped?

Doctor PARSONS. I would rather some one else would answer that question. I do not know definitely, without going into the record. I think you will find it in the record, answered by others. I know that later there is no question whatever that the activities on the dam were ordered stopped by somebody. I think it was on the basis that it would not be needed during the war. Later, the question came up before the Nitrate Commission, of which I was a member, in regard to building further plants, for there was a great fear, and a natural scare from the submarine raids, that we might be cut off entirely from the Chilean nitrates. Then they considered the building of plant No. 3 and plant No. 4, and I was called in again, for the first time on that situation, as a member of the Nitrate Commission. At that time I voted for the installation of plant No. 3 and plant No. 4 as a cyanamid plant, provided they would put into the vote the following words:

"Resolved, That in view of the present emergency and the necessity for obtaining ammonia, the cost being secondary in the present emergency, the commission recommends that the new nitrate plant, known as plant No. 3, be constructed and operated under the cyanamid process."

That was simply because we had the data and the trained men to deal with the situation, although we knew that the cost would be high and that it would be a very difficult thing to do. The commission voted unanimously as quoted.

The CHAIRMAN. But they never carried out that proposition and plant No. 3 was never built.

Doctor PARSONS. Plants Nos. 3 and 4 were started, and afterwards, I think, they expended on plants Nos. 3 and 4 approximately \$20,000,000, and then scrapped them both before they were completed, and the war had ended.

I can now reply to your previous question, because the information is before me in these hearings. The page in the hearings of the Graham committee is page 2578, and in the hearings on the sundry civil bill for 1922 you will find a copy of the data on page 216, if you wish it inserted—

The CHAIRMAN. Is it very long?

Doctor PARSONS. It is about a quarter of a page.

The CHAIRMAN. Will you kindly read it for the record?

Doctor PARSONS. Mr. Good, speaking, says:

"Right in that connection, in the hearings before the Committee on War Expenditures, on page 2578, appears the following, the question being asked by Mr. Graham:

"On the 19th of September, 1917, the record shows a memorandum was given to the Chief of Ordnance signed by Colonel Joyes, of the Ordnance Department, and a memorandum was made to you on the 20th of September, 1917"—

"This question was directed to the Secretary of War—

"by General Crozier about this subject. In this memorandum that General Crozier makes I find the following—this is simply the summary of his conclusions:

"I think that the examinations made indicate the limit of choice to four localities, viz: Chattanooga, Knoxville, Sheffield, and North Birmingham, and after fully considering all the aspects of the matter it is my opinion that the site at North Chattanooga, Tenn., having been adjudged first from the fertilizer standpoint and next from the compromise standpoint, is best fitted for the constructions now contemplated, and I recommend its adoption and the purchase of a tract of 500 to 600 acres.

"WILLIAM CROZIER,

"Brigadier General, Chief of Ordnance, United States Army."

"On the margin of that memorandum, dated August 6, 1917, is a postscript or a sort of note:

"The original letter, 471.86/2020-Nitrogen-j/z, dated September 20, 1917, a memorandum for the Secretary of War signed by William Crozier, brigadier general, Chief of Ordnance, United States Army, copy of which you already have been furnished, bears the following postscript in long hand:

"The President has selected Sheffield. So informed by Secretary of War 9/28. W. C.""

The CHAIRMAN. Have you any opinion about the cyanamid process yourself?

Doctor PARSONS. I have been through a number of plants; all there are in this country and several in Europe. I made a very careful study of the process and its operation.

The CHAIRMAN. Do you think that it is likely to be superseded by new inventions or new processes?

Doctor PARSONS. I think it is practically already superseded by the Haber process and its modifications, and on that I can give you some very definite data. The cyanamid plant in Canada is practically shut down. It is producing no cyanamid, or very little cyanamid, for fertilizer. The cyanamid plants in Italy are closed. The cyanamid plants in France are closed. The cyanamid plants in Dalmatia and Silesia are closed. The cyanamid plants in Norway and Sweden are closed. The large cyanamid plant at Odda, Norway, which I had the pleasure of visiting in 1916, and which is fully equal to the Muscle Shoals plant in quality and one of the best constructed plants I ever investigated. It is not quite one-half the size of the Muscle Shoals plant, is now closed, and has been sold at auction within the last month for \$10,000, or rather 50,000 kronen.

The CHAIRMAN. How much did it cost?

Doctor PARSONS. I do not know, but a very large sum, several million dollars. It was a plant for producing approximately one-half of the plant capacity at Muscle Shoals; say, from 80,000 to 100,000 tons of cyanamid a year, or something less than 20,000 tons of nitrogen.

The CHAIRMAN. Doctor Parsons, it is now about half past 12, and at this time the committee usually takes a recess and meets again at 2 o'clock. Could you kindly be here at 2 o'clock?

Doctor PARSONS. Certainly.

(The committee thereupon took a recess until 2 o'clock p. m.)

AFTER RECESS.

The committee met, pursuant to the recess, at 2 o'clock p. m., Hon. John C. McKenzie (acting chairman) presiding.

STATEMENT OF DR. CHARLES L. PARSONS—Resumed.

Mr. McKENZIE. I think you had not concluded your statement, Doctor Parsons, when we adjourned, and you may proceed.

Doctor PARSONS. When the hearing adjourned I was replying to a question of the chairman with reference to the present condition of the cyanamid process. I had just stated that the process which, in all the other hearings, I had stated was in a condition of obsolescence, has practically become already obsolescent;

that the plants in France are closed down; the plants in Italy are closed down, one of them fully (there are two in Italy), and one of them is possibly working on very short time making some products, but not cyanamid for fertilizer. The plants in Sweden are closed down and the plants in Norway are closed down. The plant across the border in Canada is closed down except for short-time operations for a few products which they make. They have no expectations of going ahead to any extent, immediately, so far as I am informed in fact, I am informed to the contrary.

This plant was making ammonium sulphate by sending its cyanamid to Warners, N. J., and they closed down the ammonium sulphate plant in July, 1917, because they could not operate it at a profit. At that time, ammonium sulphate was selling for over \$100 per ton. Of course, their costs were higher then than they are now, but they can not operate it to-day and they have no expectation of operating that plant again.

Mr. MILLER. Pardon; what plant is that?

Doctor PARSONS. That is the ammonium sulphate plant of the American Cyanamid Co. at Warners, N. J.

Mr. McKENZIE. What do you mean, Doctor Parsons, when you say they can not operate, that they can not operate successfully against the competition coming from foreign countries?

Doctor PARSONS. They can not operate against the competition that is coming from this country, and they certainly can not operate against the competition which may come from foreign countries, because ammonium sulphate is selling in Germany to-day, on our exchange, for approximately one-half the price it is selling in the market here.

Mr. McKENZIE. What is the competition in our own country at this time that they have to meet?

Doctor PARSONS. The competition in this country at the present time is ammonium sulphate from the coke ovens by-product. They were not able to sell their product. There has been a very great decrease in the price of nitrogenous fertilizers this last year, as I think has already been pointed out to this committee. The approximate price to-day of ammonium sulphate is around \$50 a ton. It has sold in very large quantities this last year for \$40 a ton, and I understand that there was one large sale at \$30 a ton.

Mr. McKENZIE. The product received from the coke oven is a by-product, in a sense, is it not?

Doctor PARSONS. Yes; but there has been more made than the country would take, and we have exported ammonium sulphate in quantity this last year. At the same time, I do not want you to get any false idea as to my stand with reference to that. I do not believe that that condition will last long, for I believe that this country is going to take and use all of the fixed nitrogen we can hope to make, and that it should be taken and so used by the farmers in order to produce crops more cheaply than they can do it by labor and by using more land. I am thoroughly in accord with concentrated fertilization and large use of nitrogenous fertilizers.

Mr. McKENZIE. There is not any patent on the process coming from the coke oven, is there?

Doctor PARSONS. No. There is no patent, either, on the Haber process at the present time that keeps us from using this process, which is used in Germany and which will make ammonia a great deal cheaper than any other process for the fixation of nitrogen from the air.

Mr. McKENZIE. Right in this connection, Doctor Parsons, I think it might be well for you to say if you have any opinion as to whether or not, notwithstanding the fact that under the cyanamid process it is impossible to manufacture and compete—whether there is any possible chance of a development in this country that will reduce the price of this very essential element that enters into fertilizers.

Doctor PARSONS. May I come to that in a moment and complete what I have to say about the cyanamid process, so we will clear that up?

Mr. McKENZIE. Yes; you may answer that in your own way.

Doctor PARSONS. That plant at Warners, N. J.—

Mr. PARKER (interposing). What is the name of that place?

Doctor PARSONS. Warners. That plant was also making ammonium phosphate, a very concentrated form of fertilizer, which it is very desirable we should have in this country, but they were also obliged to close that plant down six months ago because they could not sell the product at a profit.

To give you a direct incident which has just been consummated bearing on this matter: The large cyanamid plant at Odda, in Norway, which I visited in 1916 and which was at that time, I think, the best cyanamid plant in the world and has only been exceeded since by the one at Muscle Shoals, has been closed down for some little time. On the 11th of February it was sold at auction, and it sold for 50,000 kroner, and it might be well for me to put in the record here an extract from the Chemical Age, of February 18, 1922, giving that data. Fifty thousand kroner at normal exchange is some \$16,000, but at present exchange it is only approximately \$10,000 in our money. That plant was an immense plant. They are making this change with the expectation of adopting there a modification of the Haber process. As it is impossible to convert a cyanamid plant into a Haber plant or to practically use anything of importance which the cyanamid plant has in the Haber operation they really got, when they purchased this plant at auction, what might be considered a low price for the land that the plant stood on; probably a lower price than they otherwise would have gotten, because they have to clean off most of the structures on it before they can go ahead and use the new and modern process.

I had last night a conference with three Norwegians, engineers who are in the city on other matters, whom I had met in my European trips, and they tell me that it is their belief that the cyanamid plants in Germany also are closing down or are closed down. Now, I have no definite information on that. My own information is that the cyanamid plants in Germany, or at least some of them, are still running, and may run for a while yet for the reason that in Germany they have rather special conditions, not only in labor but in some of the raw materials, which the cyanamid plants use, for example, coal. The Haber plant, as used in Germany, requires about 6 tons to 6½ tons of coal per ton of nitrogen produced. The cyanamid plants require less coal for process purposes, if you leave power out of consideration. They take only from 3 to 3½ tons of coal, and coal is a very great factor in Germany at the present time. Accordingly, those plants will probably survive longer than any other cyanamid plants. They also tell me that the immense nitrogen plant at Rjukan, Norway, run by the Norsk Hydro Co., this last year purchased from Germany direct, considerable quantities of Haber-made ammonia in tank cars delivered at Rjukan for one-half the price per ton of nitrogen for which they themselves were selling it for in the form of calcium nitrate. They had to make ammonium nitrate, and it was far cheaper to get their ammonia from Germany than to get it from the cyanamid plant at Odda. That was one of the reasons that the cyanamid plant closed down, as their market was taken away from them by this German competition. In Germany ammonium sulphate is, of course, selling at a very low price. That also has been published within a week as something like \$25 or \$30 a ton for the ammonium sulphate, but, of course, everything in Germany is very low to-day.

(The article referred to follows:)

"ALBY UNITED CARBIDE UNDERTAKING—TYSSEFALDENE POWER CO. BUYS ODDA FACTORIES.

"In accordance with the arrangements disclosed at the extraordinary general meeting of the company in December last (see The Chemical Age, Vol. V, p. 838), the foreclosure sale of the Odda factories was held on February 11, when the Tyssefaldene Power Co. purchased the factories for 50,000 kroner. It will be remembered that, according to a statement made in December last, the purchasers were owed a large sum of money by the Alby Co., and that the Tyssefaldene Co., together with the English syndicate, intended to restart the factories within six months for the production of ammonium sulphate. According to an agreement reached at the December meeting of the Alby Co., an adjourned extraordinary general meeting will be held not later than February 28."

Doctor PARSONS. One other thing I would like to call your attention to is a statement made to me by Mr. Barton in the summer of 1920, which I quoted in the record because it is somewhat of a prophecy which I fully believed in at that time. Mr. Barton was the promoter in England of the Norwegian and Swedish plants, and occupied in North Europe very much the same position to the cyanamid companies that Mr. Washburn occupied in America. Mr. Barton stated to me, "Doctor Parsons, as sure as we sit here, the cyanamid process is a thing of the past, being sure to be replaced by the synthetic ammonia process." That was two years ago, and has been in accord with all the testimony I have ever given before Congress.

Now, to come to your question as to what should be done. I think there is no question whatever that America should, can, and will use the synthetic ammonia process for the fixation of nitrogen no matter what this committee decides with reference to Muscle Shoals, because it is an absolute economic certainty that a process which is developing like that process is developing is going to be utilized also in this country.

I want to refer to a statement which was made before this committee and which I saw in the press—I have not heard all the testimony—to which I want to take very strong exception, and that is with reference to certain statements that have been made concerning the explosion at Oppau as affecting the Haber process with reference to plant No. 1 at Muscle Shoals and as to its being a failure and to certain of the operations at Syracuse which are absolutely incorrect in the record.

For example, the statement was made that the plant was located at Syracuse to be near the coke ovens. This is wrong. It has no connection with coke ovens. The statement says that at Syracuse by-product hydrogen is available. That is not true. They do not use one pound of by-product hydrogen, and never did.

Mr. STOLL. Who made that statement?

Doctor PARSON. Mr. Worthington; that is, the paper says he did. I do not know. They make their hydrogen at Syracuse by exactly the same process, or essentially the same process, that they make it in Germany—from coal by the action of carbon on water and steam, and that is why the big steam plant was put in at plant No. 1. Plant No. 1 at Muscle Shoals was put in as an experimental plant on a small scale in order to get the necessary information to increase it in size. It was started on the basis of 22,000 tons of ammonium nitrate per year. However, only one unit of approximately one-third or a little more of that plant was constructed.

It was just one-fifth the size of the other plant contemplated. However, only one of the units was put in in order to get information to build the rest of the plant. They only had a very short time after that unit was completed to get data on operations. They found difficulties exactly as the Germans found when they first ran their Haber plants on the other side in the early history of that process. There were great difficulties, owing to the high pressures used and the difficulty of preparing the catalyst on a large scale. They could prepare it easily in the laboratory on a small scale. Then the armistice came and the plant was closed down.

The Ordnance Department tried to make arrangements with the General Chemical Co. to go ahead and operate plant No. 1, but they could not come to an agreement, largely because the General Chemical Co. wanted to get away from any question of government relationship. Their engineers had claimed that it was the Government engineers that kept it from running right in the first place, and the Government engineers claimed that it was their engineers that kept it from running right in the first place, and there was no complete agreement between them. Accordingly the General Chemical Co. changed its plans and started to build a new plant by essentially the same process, changing a number of the mechanical details for which they had obtained the data in the operation at Muscle Shoals, changing their catalyst and some other details of the plant. Then they built a plant almost immediately at Syracuse, N. Y., to run by the General Chemical Co.'s process, running under 100 atmospheres, as at Muscle Shoals. That plant was completed in very short order. That plant operated perfectly from the start. So far as I know it has not closed down a day since it started. It was built on a 10-ton basis, and it has been producing over 12 tons a day for several months.

So that instead of plant No. 1 being a failure, in my opinion, plant No. 1 has thoroughly justified itself. I have not the slightest doubt that the fixed nitrogen which is to be made in the future in America is going to be made by a synthetic ammonia process, whether it is at Muscle Shoals or wherever it may be, simply for the reason that there is no other process in the world that for a minute can compete with it commercially.

In Germany the Haber process is operating at full capacity, turning out 300,000 tons of nitrogen per year, about 90,000 tons of which is at Oppau, and the other 210,000 at Merseburg.

At Oppau there was a terrible explosion, probably the largest that ever occurred, a few months ago. That explosion had absolutely nothing to do with the Haber process. It was an explosion of ammonium nitrate mixed with

ammonium sulphate. They had 4,500 tons of that material stored in one building. You have stored at Muscle Shoals to-day 3,400,000 pounds, or something over 1,500 tons of ammonium nitrate, which would explode itself if it was subjected to the same conditions. That amount of ammonium nitrate which is in storage at Muscle Shoals has been on the market, offered for sale within three months, and the highest bid they could get, so far as I have been able to find out, was about 3½ cents a pound, and the average was somewhere around 3¼ cents, which is a very low price.

The Government declined the bids on that basis and none of it was sold, although it is the most concentrated form of nitrogen you have in America at the present time, and ammonium nitrate if put out by itself by hand on the farm would be a most excellent fertilizer. It will not mix readily in mixed fertilizer, but the South uses large quantities of sodium nitrate every year in the form of sodium nitrate put out as top dressing, and the ammonium nitrate would be very valuable to the farmers if it was sold to them, and they had large bids from the farmers in the South, some of which I have personal knowledge of.

Now, as to that explosion at Oppau, I want to go very strongly on record as saying it had nothing whatever to do with the process by which the ammonium nitrate was produced. Nobody knows why it took place, but these engineers with whom I was talking last night, and who bring me the latest information, tell me that there is talk around among the engineers on the other side that it was due to the fact that the workmen substituted dynamite for some of the safety powders which had been used before in breaking up the mass. If you take 4,500 tons or any large amount of ammonium nitrate with ammonium sulphate mixed with it and pile it up in large piles or in large storehouses, as it was piled there, it cakes together in a mass. They had been blasting it out, as they needed to break it up. Now, the rumor is as stated, and I wish you to understand that this is rumor only—I do not think anybody knows—I do not believe the Germans themselves know why that explosion took place.

They know that they were blasting, but the rumor is that the workmen were on piecework and the dynamite would break up the mass very much more rapidly than these other explosives; that they substituted dynamite to break up the mass instead of the explosives which had been used theretofore, and that the mass itself then went off. Now, we know that ammonium nitrate will explode, because we had a big ammonium nitrate explosion in this country at Morgan, N. J., in the latter days of the war. Nobody supposed before that explosion that you could ever get an explosion out of ammonium nitrate; but they got it there, and they got it in Germany, and if you have the right conditions it is liable to go off anywhere; but I still think there is no danger in making ammonium nitrate if it is properly and judiciously handled; but if you have 4,500 tons of it around I would advise you not to try to break it up with dynamite or with any other explosives.

The Haber plant over there is again working. This plant at Oppau, which was supposed to be wiped off the face of the earth, is now, within a few months after this explosion, producing nitrogen again to capacity, and Germany is turning out something like 2,000,000 tons of ammonium sulphate, or its equivalent, made from air nitrogen, and using most of it in Germany for concentrated fertilization. So that I think there is no question whatsoever as to the future of the Haber process, and I believe, and believe very strongly, that the one possibility of making fertilizer with any degree of cheapness is through the development of plant No. 1 at Muscle Shoals, and that you can never hope to do anything with plant No. 2, and that anybody that runs it will lose money very rapidly.

I would like to call your attention, because a few matters have come to my notice, to Exhibit B before this committee bearing upon the same argument. Some one of this committee asked Major Burns, of the Ordnance Department, to submit an estimate as to the commercial operations from the standpoint of profit and loss from plant No. 2 for a period of six years. He has done that in your Exhibit B. Now, Exhibit B, as it stands, shows a loss for the six years of operation of \$2,919,650. To get that loss, however, in the first place, he puts his ammonium sulphate at \$65 a ton. Ammonium sulphate may go up in price. I am not predicting markets, but it is my opinion that ammonium sulphate will never sell for any long period of time much higher than it has this year, on account of the great developments of the processes which are taking place. The market price at the present time is approximately \$50 a ton, and as I have said, large quantities, thousands of tons, have sold this last year as low as \$40 a ton. If

you put that price in at \$50 per ton, which is the present market price, instead of \$65, which Major Burns assumed as an average market price (not "cheap fertilizer," but more expensive fertilizer), you will get a loss on those same figures of \$22,269,650 for operating plant No. 2 for six years. These figures come to you from your own Government experts, and are agreed to, not only by the Ordnance Department, but by the Nitrogen Fixation Laboratory. My own opinion is that the expense account in their estimate is too low, but unless you wish me to go into that, I think it is unnecessary to go further than to show the loss which has already been indicated. He has put his depreciation, for example, for six years at 5 per cent. My personal opinion is that those plants will be obsolescent—I think they are obsolescent now; but if you make them obsolescent through the six years it is much more than that. He has put his interest for six years at 5 per cent, and I do not believe that any industrial corporation of any size for the next six years is going to get their money at 5 per cent.

There is one other thing with reference to that plant which I think should be brought to your attention, which, so far as I know, has not been brought before you, and that is the fact that if the cyanamid plant at Muscle Shoals is operated, there will be approximately 460,000 tons of sludge per year that has to be disposed of. Now, 460,000 tons of sludge per year is equivalent to approximately 300,000 cubic yards. That has got to be disposed of and put somewhere. In the hearings which have gone before, they have assumed it would be run into the Tennessee River. It is my opinion that if it is run into the Tennessee River you will damage navigation far more than you will help it by any locks you may put in, not only on account of the fact that a good portion of this material itself will be deposited, but also, owing to the fact that it is an alkaline material, and it is well known that alkaline material causes clay in water to coagulate and settle. Wherever the waters of the Mississippi River or any other muddy river come in contact with electrolytes, like they do when they enter the Gulf of Mexico and touch salt water, their clay is deposited and deltas are formed. If you put this quantity of material into the river when it goes by the plant at Muscle Shoals, it is my opinion that it will not be six months before you are legislating against it, and the disposal of the material will be a very difficult matter on account of this large amount.

There is another matter of some importance, of a technical nature, which it seems to me should be corrected. I happened to be present at one or two of the early hearings, because I wanted to hear Mr. Swann's testimony, especially about phosphate, because I wanted to know what he had done in his plant, and I came up to listen. I had to wait through one or two hearings before he came on, and I heard some of the testimony at that time, and I have seen some of the printed testimony since then. I understand in one of the offers that is before you there is an agreement to run plant No. 2 to its capacity unless prevented by strikes, and lack of making profit, and some other points the exact detail of which you can get from your testimony.

The question was frequently asked as to what was meant in that offer by the equivalent of 110,000 tons of ammonium nitrate or, to put it in other units, of 40,000 tons of nitrogen, and the statement was made that the equivalent reasonably considered would be 2,000,000 tons of commercial fertilizer of 2-8-2. Now, if you can get anybody to agree to make 2,000,000 tons of fertilizer of 2-8-2 at a cheaper price than the present market, I think I should be in favor of any such offer, but I want to be sure that you have such an agreement. The point is that 2,000,000 tons of 2-8-2 fertilizer would contain 40,000 tons of nitrogen, which is the full capacity of plant No. 2 as it stands, which requires, we will say, 100,000 horsepower to produce. It means also 160,000 tons of P_2O_5 , or phosphoric acid, and it means 40,000 tons of K_2O , or potash. Now, to produce that phosphoric acid by the electric-furnace method at Muscle Shoals would take very much more power than to produce the nitrogen, and to produce the potash from potash shales would also require its quota of power, so that taking it on the very lowest possible basis of power production—and I can go into the details if you wish—it would require approximately 100,000 horsepower for the 40,000 tons of nitrogen and possibly 160,000 to 170,000 horsepower for the production of the phosphoric acid and approximately 75,000 horsepower more for the production of the potash; and where are you going to get the power if this is going to be done as a power proposition? You simply will not have any power to run the automobile factory which plant No. 1 is to be converted into. Now, that is not an equivalent and could not be considered by anyone an equivalent, and would take at least three times the horsepower if it was carried out by the methods proposed.

The statement was made that the 2,000,000 tons of fertilizer would probably be made at a saving of 33½ per cent. Now, if you will take the present price of that amount of fertilizer and put all the "nitrate" which could be made in plant No. 2 into it for nothing, the saving would not be 33½ per cent of the fertilizer.

I think that I have nothing more to say, unless there are some questions.

Mr. McKENZIE. Doctor Parsons, do you have an organization in this country of chemists such as yourself?

Doctor PARSONS. Yes; there are several, the Electric Chemical Society, the Institute of Chemical Engineers, and the American Chemical Society.

Mr. McKENZIE. I presume all of those men give more or less attention to matters of this character?

Doctor PARSONS. Well, some of them specialize more in this line than others—some work on steel work and some on fertilizer work and some on nitrates, etc.

Mr. McKENZIE. In your statement to the committee have you been voicing the general sentiment or views of this organization or these various organizations, or are they principally your own views?

Doctor PARSONS. None of the organizations has taken any stand on the matter whatsoever. I am voicing my own views entirely, which I believe, however, 99 per cent of the chemists of the country would agree with if they went into the matter, but of that I am not prepared to speak.

Mr. McKENZIE. Do you know of any distinguished chemists that differ from you in this contention about the cyanamid process?

Doctor PARSONS. Not anyone who is not interested in the cyanamid process; no; not at the present time. They have disagreed with me in the past as to what the future of the cyanamid process would be.

Mr. McKENZIE. Now, I want to ask you this question, Mr. Parsons. I think you have made a pretty strong case here as to the apparent vanishing of the cyanamid process—

Doctor PARSONS (interposing). I want to call your attention to the statement of Doctor Tolman, who is one of our very highest class chemists. He states in his testimony that they estimate now a cost of about \$65 per ton; that that is the lowest estimate they can make, and he is at the head of your nitrogen fixation laboratory. If you can not make ammonium sulphate at less than \$65 a ton, you can not hope to sell it at the present time, and certainly not at a profit; and while Doctor Tolman and I would probably disagree as to what the cost of ammonium sulphate by the cyanamid process would be, and he would place his figures considerably lower than I would place them, still he has stated to you after careful study that he thinks they could break about even at \$65 per ton for ammonium sulphate with power at three-quarters of a mill per kilowatt hour and with capital charges of not over five to ten million dollars.

Mr. McKENZIE. Are you familiar with the proposed contract submitted by Mr. Ford?

Doctor PARSONS. I have read it. I have not studied it with very great care.

Mr. McKENZIE. Is it your contention that under that contract Mr. Ford would be compelled to proceed with the manufacture of nitrates under the cyanamid process, or could he utilize any new development in the manufacture?

Doctor PARSONS. You have got to go to the testimony, I think, to find out about that.

Mr. McKENZIE. I am speaking of the contract.

Doctor PARSONS. He agrees to two things, as I understand it, and one of them is to keep plant No. 2 in a stand-by condition, available for the use of the public defense at any time; and, second, to operate it to capacity unless prevented by strikes or other causes. I understand he has stated to Secretary Weeks that one of the causes would be inability to run it at a profit, and that Mr. Mayo gave the same testimony, and all other representatives of his. I am sorry Mr. Ford has not been here before you to state definitely what he means, but if he means that if he can not run that plant at a profit he is not going to run it I do not think he will ever run it, and I think that stands out practically in every one of the reports that have come to you officially.

For example, there is a big "If" in every one of the propositions. Secretary Weeks, for example, shows clearly in his testimony that he does not consider that this offer carries any real assurance or guaranty that any fertilizer or nitrate will be made.

General Williams says: "If the Ford offer means, in the case of the No. 2 plant, that such plant will be operated at its approximate capacity for the fixation of nitrogen," etc.

General Beach says: "Indirect benefits accruing to the United States are (b) the production in the interest of the public welfare of large amounts of fertilizer at a cost not exceeding the reasonable cost of production, providing that the production of nitrates adapted to fertilizing purposes is found to be practicable."

The Secretary of Agriculture in his statement to you was no less noncommittal. The authorized statement given out by Doctor Tolman favors the Ford offer only "if its terms are sufficiently definite and binding to make sure that the plant will be operated continuously for the manufacture of fertilizer."

Mr. Ford, according to Secretary Weeks, states definitely that plant No. 2 will not be operated unless it can be operated at a profit, and Mr. Mayo definitely confirms this statement in his testimony.

Mr. JAMES. This morning you were talking about several talks Mr. Washburn had with the committee of which you were a member. You talked about his proposition, and then you said afterwards that they got better terms. By "they" you meant Mr. Washburn and his friends, did you not?

Doctor PARSONS. No; I meant the Ordnance Department. They got very much better terms.

Mr. JAMES. The Ordnance Department got better terms at last than they did at first?

Doctor PARSONS. Yes. I had nothing to do with those negotiations, and I know nothing about them except as they are in the record. My connection with the case closed that evening, and I was not called in again on plant No. 2.

Mr. JAMES. You mean at the first meeting?

Doctor PARSONS. Yes, sir.

Mr. JAMES. There was a gentleman there that night from New York called Mr. MacRoberts?

Doctor PARSONS. No; I think not.

Mr. JAMES. I think you will find at the first meeting—that was the night Mr. Baruch was there, was it not?

Doctor PARSONS. No. I am not sure whether Mr. Baruch was there or not. I do not remember that he was. He may have been. I would have to refer to the previous testimony to find out definitely. I remember the officers, including Major Crabs, and I was under the impression that I was the only civilian present.

Mr. JAMES. At one meeting when Mr. Baruch was present, there was a Mr. McRoberts, of the National City Bank of New York, present. He was then a civilian but was afterwards a colonel in the Army, and he was the man who was responsible for all these contracts by which we are tied up. At that meeting I supposed that the men who went there were men who knew some thing about this nitrates proposition.

Doctor PARSONS. I do not think Mr. McRoberts was present at that meeting, but you can easily find out from the hearings before Mr. Graham's committee, because the full personnel is given there.

Mr. JAMES. Do you know anything about Mr. McRoberts?

Doctor PARSONS. I do not. I have no knowledge of ever having seen him.

Mr. JAMES. You never heard of his being an expert on the nitrate proposition?

Doctor PARSONS. No. He was, I think, in charge of contractual relations in the Ordnance Department, because I know when we came to make the contracts for the cyanide plant, which I had charge of and which I built at Saltville, the contracts had to go over to Mr. McRoberts, but I dealt with a Major or Colonel Black, I think it was, in the matter, and never saw Mr. McRoberts myself.

Mr. JAMES. Major Joyes testified at the hearings of the Graham committee that he had talked with Mr. McRoberts before he entered the Army about this matter, and I was just wondering whether he knew anything at all about the nitrate business.

Doctor PARSONS. I have absolutely no knowledge of it.

Mr. JAMES. You were not consulted about nitrate plant No. 2 at all?

Doctor PARSONS. No; except at that first meeting, at which I put my opinions in writing the next morning, because I wanted to be on record. I saw very clearly that night that the rest of them did not agree with me and I did not want to be in a position later where I would not have a full memorandum of the occasion.

Mr. JAMES. Was there any talk that night of plant No. 2 being used for the manufacture of fertilizer after the war was over?

Doctor PARSONS. Not that I remember. It was built almost wholly—it was built wholly, as I understand it, as a war emergency. It was not expected then that it could compete with other processes on the fertilizer basis.

Mr. MILLER. You are very much against the cyanamid process, Doctor?

Doctor PARSONS. No; I am not against it.

Mr. MILLER. As compared with the Haber process?

Doctor PARSONS. I think there is absolutely no question but what the Haber process is the process of the future. I have not anything against the cyanamid process except, in my opinion, it is practically obsolescent.

Mr. MILLER. The plant at Syracuse of which you speak is on the Haber process?

Doctor PARSONS. A modification of the Haber process.

Mr. MILLER. Built by the same company, I believe, the General Chemical Co.?

Doctor PARSONS. Built by the same company that was in contractual relations with the Government for plant No. 1; yes.

Mr. MILLER. Plant No. 1 is a failure, you say?

Doctor PARSONS. I do not say so; no, sir; I do not consider it a failure at all. I consider it the first trial of a process which has become unusually successful and that they gained the information from it which they hoped to gain from it when they started it.

Mr. MILLER. It was built as a trial plant, then?

Doctor PARSONS. Yes, sir.

Mr. MILLER. It was a rather dangerous time—during the war—to start in with a trial plant.

Doctor PARSONS. It was not built for war emergencies at all. It was built under the national defense act, with the idea of getting a supply both for fertilizers and for the use of the country in time of war.

Mr. MILLER. Doctor, there was certainly an impelling force in Congress to enact this legislation when the world was ablaze with war and a great many people of that day and hour believed that ultimately America would get into it. It was certainly felt that that was an impelling reason with the prospects we had before us. That is the way I view it.

Doctor PARSONS. That plant was built after very careful consideration by the best talent they could get in America to meet the purposes of the national defense act. We were not then in the war. I am wrong; that was determined upon in May of 1917. In the spring of 1917 we were in the war, but there was not any expectation that we would be cut off from Chilean saltpeter or that there would be any such demand for that material. It was in the latter part of that year that the urgency came on, and then they built plant No. 2 as a war emergency, because they knew they had all the data to make it a success from the start. The other plant was built as a semicommercial trial plant and is a successful commercial plant in Syracuse to-day.

Mr. MILLER. You mean the plant in Syracuse was built as a semicommercial trial plant, or the one at Muscle Shoals?

Doctor PARSONS. The one at Muscle Shoals, which is only about one-third completed; that is, to its full capacity.

Mr. MILLER. It strikes me as rather peculiar and as a rather bad proposition, when we were at war or on the threshold of a war, for anybody to advise the Government of a process for the fixation of nitrogen that they did not know would be a success.

Doctor PARSONS. We knew at that time that that process, or basically the same process, was a very great success in Germany, and we thought that it would work more successfully on the start off than it did; but it was built on a small scale to be sure of that, and with the idea of getting the data and then rapidly increasing it.

Mr. MILLER. Were there any plants then in existence and running to capacity in Norway and Sweden that were using the Haber process?

Doctor PARSONS. No, sir; there was none, except in Germany, and we could not get into Germany and get the data. We had to simply take the data which the General Chemical Co. had.

Mr. MILLER. Now, the cyanamid process, you say, is an obsolescent process, but it will make ammonium nitrate?

Dr. PARSONS. Yes, sir; and that is why it was used.

Mr. MILLER. As between a surety and a failure, or as between a process that all agree will manufacture what we are after, although it costs more, as compared with a process that we do not know how to follow out, it seems to me

that in time of war the better judgment is to follow the system that has been proved, and I suppose that was the policy that the Government followed.

Doctor PARSONS. That is exactly the policy upon which plant No. 2 was based, and to which I think no one has taken exception. It was a process by which you can get ammonium nitrate, no matter what the cost might be.

Mr. MILLER. I think that was a good policy. Now, as to all these cyanamid factories in Germany which you say have closed down. Were they built as war emergencies, and was the one in Sweden of which you spoke built for the immediate sale of its product to Germany?

Doctor PARSONS. The ones in Norway and Sweden were not built, as I understand it, as a war emergency, because they were built before the war. The cyanamid process predated the Haber process, and it was the process which people expected to make a commercial profit from in those days.

Mr. MILLER. But its output was taken almost exclusively by Germany, was it not?

Doctor PARSONS. No; its output was taken almost exclusively by the Allies.

Mr. MILLER. By England?

Doctor PARSONS. By England and France. Most of it went to France. Its output went in the form of ammonia and that was sold to the arc plant at Bjukan that had nitric acid. They converted it into ammonium nitrate and produced some 240,000 tons of ammonium nitrate per year, the major portion of which went to France after the war broke out.

Mr. MILLER. It was completed just before the war was it not?

Doctor PARSONS. They were all greatly enlarged during the war, because there was an immense market.

Mr. MILLER. Then we might say that the inducing cause for the construction of those immense plants was the great demand for it and the good price which prevailed during the war?

Doctor PARSONS. That had a very great effect. There is no question but what the enlargement was due to that almost wholly.

Mr. MILLER. You spoke of this large plant in Norway, I believe, having been sold for an unreasonably small sum of money. Do you know the circumstances of that sale? Was it a case of bankruptcy or forced sale, or was it just a deliberate change in processes?

Doctor PARSONS. I understand it was a case of practical bankruptcy by the cyanamid company, but that the people who control the cyanamid company are going to go over to a modification of the Haber process, and that they have practically got to clean away everything there. That is an important point that you are bringing out, Mr. Miller. If they change plant No. 2, it will have to be practically wiped off of the ground before it can be used for any other method for fixing nitrogen. You could not any more make nitrogen by the Haber process in cyanamid plant No. 2, at Muscle Shoals, than you could make shoe strings in a blacksmith shop. You would have to clean out the blacksmith shop and start fresh.

Mr. MILLER. It is fundamentally an entirely different method of procedure?

Doctor PARSONS. Fundamentally an entirely different method of procedure.

Mr. MILLER. You are not connected in any way with any institution manufacturing by the Haber process in any wise?

Doctor PARSONS. I am not.

Mr. MILLER. Your statement is just a clean, scientific comparison, or a comparison from a scientific standpoint of the two processes, unprejudiced.

Doctor PARSONS. I am giving you absolutely unprejudiced testimony, as I understand it, as I have always done before every committee of Congress before which I have ever appeared.

Mr. MILLER. Then, according to your ideas, Mr. Ford's proposition can not be other than a losing business venture so far as the manufacture of ammonium nitrate as an ingredient of fertilizer at plant No. 2 is concerned?

Doctor PARSONS. Anyone that operates plant No. 2 will lose money from the day he starts it, if he is going to try to fix nitrogen therein.

Mr. MILLER. There is no exception in Mr. Ford's offer that he will not run the plant unless he can run it at a profit. He agrees absolutely, and at all events, to run that plant. There has been some quibbling around here, but the contract itself says that he will run the plant to its capacity. True, he does not bind himself to the production of ammonium nitrate exclusively, but to other fertilizer compounds, unless prevented by strikes, fires, or unforeseen accidents. The element of a commercial success does not figure in it.

Doctor PARSONS. All I know is the testimony I have heard, and Secretary Weeks's opinion on the matter.

Mr. MILLER. Yes; there has been a lot of testifying around here. I believe that is all.

Doctor PARSONS. My only contention is that I hope that if he is to run plant No. 2 that you will get some definite guaranty that that is what he means, and that he will run it, either Mr. Ford or anybody else.

Mr. PARKER. The words of the contract are, "The company agrees to operate, etc., at the approximate present annual capacity, etc., except as it may be prevented by strikes, accidents, fires, or other causes beyond its control." I have had some difficulty in expounding the words, "other causes beyond its control," and whether that meant in case it was impossible to make it at a decent price. Have you ever known that phrase used in a contract before?

Doctor PARSONS. I have not, no; but then I would not normally be expected to know, because I know very little about law and am taking no stand here as a lawyer.

Mr. PARKER. The plant No. 2 cyanamid process is a rather complicated sort of manufacture, and goes through several steps. What is the first thing it makes?

Doctor PARSONS. Calcium carbide.

Mr. PARKER. Is that a thing for which there is a market?

Doctor PARSONS. Yes; quite a lot of it is sold in the United States. There are other plants in the United States larger and more extensive than the plant at Muscle Shoals. It is manufactured for the production of acetylene.

Mr. PARKER. Is the market growing or not?

Doctor PARSONS. I think it is, but I can not speak with authority.

Mr. PARKER. You can not say, then, if it had water power, whether there would be a profitable market for the calcium carbide without going any further?

Doctor PARSONS. I think there would be a market for calcium carbide; yes.

Mr. PARKER. And that they could make it as cheap as anybody?

Doctor PARSONS. I do not see any reason why they could not.

Mr. PARKER. The next thing they make from the calcium carbide is what?

Doctor PARSONS. Cyanamid.

Mr. PARKER. Cyanamid—what is that?

Doctor PARSONS. The calcium carbide is ground fine and is put in a special form of furnace, is heated locally, and pure nitrogen from the air is pumped into the mass.

Mr. PARKER. Then pure nitrogen has to be made.

Doctor PARSONS. Pure nitrogen has to be made from the air, yes. That is done by liquefying the air and allowing the oxygen to boil out.

Mr. PARKER. Is that an expensive process or not?

Doctor PARSONS. That is not. It is a very cheap process.

Mr. PARKER. Getting the nitrogen is a cheap process?

Doctor PARSONS. Yes.

Mr. PARKER. Is getting the cyanamid a cheap process?

Doctor PARSONS. From the carbide.

Mr. PARKER. No; the cyanamid itself.

Doctor PARSONS. No; it is not a cheap process. You have to make the carbide first. Then the carbide has to be ground. There are some dangers in that grinding. It then has to be put in these special furnaces, locally heated, the nitrogen pumped in, and the hot carbide absorbs the nitrogen to form cyanamid.

Mr. PARKER. Is there a market for cyanamid?

Doctor PARSONS. There is not, to the extent of that plant. There is a very limited market for cyanamid, and at the present time there is practically no market for cyanamid at any price it can be made.

Mr. PARKER. So that the profitable part of this manufacture stops, so far as that is concerned, with the manufacture of the calcium carbide.

Doctor PARSONS. That is correct.

Mr. PARKER. After you have made the cyanamid, what is next?

Doctor PARSONS. That cyanamid cakes again by the process and has to be reground in special constructed mills. Being reground, it is then put in large autoclaves.

Mr. PARKER. How do you spell that?

Doctor PARSONS. An autoclave is essentially a pressure boiler, but usually higher pressure than an ordinary pressure boiler would be. They run in caustic soda or sodium carbonate and then run in steam under high pressure. Under those conditions, the nitrogen in the cyanamid is converted into ammonia gas. That ammonia gas is later partly oxidized to nitric acid and then another

portion of the ammonia gas is absorbed in nitric acid to make ammonium nitrate. Now, ammonium nitrate is not at the present time salable for fertilizer. They would have to put in a sulphuric acid plant.

Mr. PARKER. I understand that. They are not at present salable without changing them into ammonium sulphate.

Doctor PARSONS. Correct.

Mr. PARKER. Are they made cheaply? Is there any market for them at all for any purpose?

Doctor PARSONS. For what?

Mr. PARKER. For the ammonia gas.

Doctor PARSONS. Only for fertilizer purposes and for refrigeration.

Mr. PARKER. There is a market for it for refrigeration?

Doctor PARSONS. But it first has to be liquefied.

Mr. PARKER. And is this product manufactured there cheap enough to sell on the market for that purpose?

Doctor PARSONS. No, sir; because it has to go into competition with other ammonia which is on the market much more cheaply than it can be produced at that plant.

Mr. PARKER. Why is the other much cheaper?

Doctor PARSONS. Simply because at the present time the supply is in excess of the demand, I presume.

Mr. PARKER. When the demand is reasonable for this product, can they make it as cheap as it can be made by other processes?

Doctor PARSONS. They can not. They can make it much cheaper by the Haber process than they can by the cyanamid process, no matter what the demand may be.

Mr. PARKER. You had something to do with putting in plant No. 1, did you not?

Doctor PARSONS. I did not.

Mr. PARKER. I misunderstood you.

Doctor PARSONS. I had something to do with the board that advised its being put in. It was put in by Government engineers.

Mr. PARKER. You afterwards did work with the Syracuse company?

Doctor PARSONS. Afterwards I was consulting chemist with the Syracuse company until last August, when their plant began operating.

Mr. PARKER. Do you know why the process failed at plant No. 1?

Doctor PARSONS. I do not consider that the process failed at No. 1, but why it did not operate successfully in the first place was due to a number of causes. The first and most important was that the catalyst which at that time they expected to use could not be made on a large scale successfully, as they were able to make it on a small scale in the laboratory.

Mr. PARKER. Can they do it now?

Doctor PARSONS. They do it now, but they use another catalyst.

Mr. PARKER. Is that a secret catalyst?

Doctor PARSONS. It is.

Mr. MCKENZIE. Pardon me, Mr. Parker, will you permit Doctor Parsons to explain that term?

Mr. PARKER. Catalyst?

Mr. MCKENZIE. Yes.

Doctor PARSONS. A catalyst is a substance which by its presence enables a chemical reaction to take place rapidly, when the reaction would not take place unless the catalyst was there. It has been explained in the hearings before, and possibly to you; and this comparison may serve, we do not know how a marriage could take place without a minister.

Mr. MCKENZIE. Oh, yes, we do.

Doctor PARSONS. Or some function of law.

Mr. PARKER. I went to Gretna Green, and at Gretna Green they were making sulphuric acid. They burnt the sulphur at the bottom of a big tower. They brought a blast of hot air down a large tower, and they would have gotten nothing more than this yellow gas that comes from burning sulphur except for the presence of a platinum screen or mesh across this thing, and for some unknown reason the screen of platinum made the yellow smoke turn into sulphuric acid which was almost without water and absolutely pure. Am I right about that?

Doctor PARSONS. You are right except it is not a yellow smoke. Sulphur dioxide is absolutely colorless.

Mr. PARKER. Well, we generally think of it so. It is the kind of smoke that comes from the lighting of a sulphur match.

Doctor PARSONS. One of the most important and one of the largest catalyst processes was the process for the manufacture of strong sulphuric acid. As you say, the gas which comes from burning sulphur, which you get when you strike a sulphur match, and air are passed over platinum on asbestos, and if the platinum is there they combine to form sulphuric acid, and if the platinum is not there, they do not. Now, that is what a catalyst is.

Mr. PARKER. They make such a pure sulphuric acid that they could carry around in an iron receptacle.

Doctor PARSONS. Yes; and another thing, if there happens to be any arsenic in that sulphuric acid, the platinum will not work. It poisons the platinum the same as it would poison a human being.

Mr. PARKER. The Agricultural Department people said they had a first rate catalyst now.

Doctor PARSONS. Yes; they have an excellent catalyst, the best in the world.

Mr. PARKER. But you said the catalyst was a secret.

Doctor PARSONS. The catalyst which the General Chemical Co. uses is a secret.

Mr. PARKER. And is the one that the Agricultural people use just as good?

Doctor PARSONS. In my opinion it is better.

Mr. PARKER. Then there is no difficulty about the catalyst in carrying on this manufacture by the Haber process.

Doctor PARSONS. That is quite correct.

Mr. PARKER. Now, what other difficulties besides the catalyst which they had there were there about that process. I heard something about leakages, etc.

Doctor PARSONS. That was the second great difficulty. Of course, it was one of the first experiences that the mechanical engineers of this country had had with pressures of 1,500 pounds per square inch in large units, and there were certain leakages and certain bulges in the apparatus which they had difficulty to fix. They have overcome that absolutely at the present time, and since those early days also the Chemical Foundation has taken over the German patents.

Mr. PARKER. Who overcame those leakages? Do you mean that the Ordnance people down at Muscle Shoals have overcome those leakages?

Doctor PARSONS. A number of those leakages were overcome and were being overcome before the plant closed; but they have been more especially overcome in the redesigned plant at Syracuse.

Mr. PARKER. Would you then advise, and would it be necessary, to redesign plant No. 1 to make it worthy?

Doctor PARSONS. Yes, sir; I think it would.

Mr. PARKER. How much would that cost, taking the unit they have there, that costs how many million dollars?

Doctor PARSONS. I do not think I could give you that cost without referring to the record.

Mr. PARKER. Would it cost one-third more than it has already cost or one-fourth or one-fifth?

Doctor PARSONS. I think that plant at the present time could be put into operating form for \$1,500,000 to \$2,000,000, with about 30 tons a day capacity.

Mr. PARKER. Do you know what was the original cost of it?

Doctor PARSONS. There were a great many other things in the cost. There was an ammonium nitrate plant, there was an ammonium oxidation plant, there was a gas plant, there was a \$1,300,000 steam plant, and there was a nitric acid concentration plant, and I would have to go to the records—

Mr. PARKER (Interposing). Were all those things separate?

Doctor PARSONS. All those things are separate entities, but the steam plant is essential to the Haber process if you are going to use the method which is used at Syracuse.

Mr. PARKER. You have to have a steam plant and then what do you get to mix with it—do you get hydrogen in the same way; what is the process, by the way?

Doctor PARSONS. In the Haber process as operated in Germany and as operated at Syracuse and as was contemplated in the operation of plant No. 1 at Muscle Shoals, the hydrogen is obtained by the action of steam on red-hot coal or coke. It is impossible for me to explain this without using chemical terms, although I will try to do it.

Mr. PARKER. I understand that. That gives you carbonous oxide gas?

Doctor PARSONS. That gives you a mixture of hydrogen and carbon monoxide.

Mr. PARKER. That is what they used to call carbonous oxide, and it is the gas that burns a blue flame?

Doctor PARSONS. Yes. Then they pass those two gases over a specially prepared catalyst, which consists of iron oxide, with some chromium oxide in it.

Mr. PARKER. Is that a secret?

Doctor PARSONS. It is supposed to be more or less, but it is not. I know about it and so do many others. I think the temperature is about 350 degrees. Under those conditions carbon monoxide is converted, with some steam, to another equivalent of hydrogen and to carbon dioxide, and you get just as much more hydrogen as you had in the first place. The carbon dioxide has to be washed out at 30 atmospheres' pressure in a special apparatus, just like you make soda water.

Mr. PARKER. Is there any expensive chemical required to take it out?

Doctor PARSONS. You have to use some caustic soda to get out the last part of it.

Mr. PARKER. All this is a pretty cheap process of making hydrogen, is it not?

Doctor PARSONS. It is about as cheap as any process used extensively to make hydrogen in the world to-day. I think there are possibilities of other cheaper processes. In fact, the basic feature of the Haber process lies in getting cheap hydrogen. I understand in plant No. 1, so far as the cost of operation is concerned, 20 per cent of the cost was in the production of hydrogen and 50 per cent in its purification.

Mr. PARKER. That can be done cheaper than that, can it not?

Doctor PARSONS. It is being done cheaper than that now by the improvements that have been made.

Mr. PARKER. Are the plans in connection with plant No. 1, for production and purification, all right?

Doctor PARSONS. They will have to be changed.

Mr. PARKER. Which part?

Doctor PARSONS. The whole of it.

Mr. PARKER. The whole machinery?

Doctor PARSONS. Not the whole machinery, but there will have to be very extensive changes made in plant No. 1.

Mr. PARKER. What will that cost?

Doctor PARSONS. That comes in the cost I have given you.

Mr. PARKER. Having gotten your hydrogen, what is next?

Doctor PARSONS. They run the nitrogen in from the air at the same time that they make the original water gas. They get the nitrogen in that way. But in my opinion, it is not the best way of working. The proper way to work it, in my opinion, is to get the nitrogen from the Claude or Linde liquor-air plants.

Mr. PARKER. I thought the liquid air was a very expensive proposition.

Doctor PARSONS. Nitrogen by the Claude process would be produced for about 10 cents per thousand cubic feet, which makes it a very small proportion of the total cost.

Mr. PARKER. Is it expensive to make the two unite?

Doctor PARSONS. Not particularly.

Mr. PARKER. Is that where the catalyst comes in?

Doctor PARSONS. That is where the special catalyst comes in.

Mr. PARKER. Of course, you were employed by the Syracuse company, and you can not tell what their catalyst was?

Doctor PARSONS. I do not know; they kept it secret from me.

Mr. PARKER. Then how do you know that the other is better?

Doctor PARSONS. I have seen the results of the comparative tests made in the nitrogen fixation laboratory.

Mr. PARKER. That is only a laboratory experiment?

Doctor PARSONS. No. They have there a pretty big plant themselves.

Mr. PARKER. You are sure that the catalyst that they have developed in the Agricultural Department laboratory is the best in the world, and they say they think it is.

Doctor PARSONS. That is my opinion also.

Mr. PARKER. That gives you the ammonia?

Doctor PARSONS. That gives the ammonia; yes, sir.

Mr. PARKER. What is next in the Haber process?

Doctor PARSONS. That completes the Haber process.

Mr. PARKER. How do you turn that ammonia into explosives?

Doctor PARSONS. If they want to convert that into explosives it is blown with air over platinum gauze, heated red hot, and under those conditions the ammonia burns in the air, not to nitrogen and water, as it would ordinarily burn, but the platinum acting as a catalyst converts it into nitric oxide, which absorbed in water produces nitric acid.

Mr. PARKER. It makes a rather weak nitric acid, does it not?

Doctor PARSONS. As it comes from ammonia oxidation it gives you approximately 50 per cent, as Colonel Joyes told you.

Mr. PARKER. Do you not need much—

Doctor PARSONS (interposing). You can then concentrate it in a special concentrating plant, of which there is one already built at plant No. 1, which was built for that purpose.

Mr. PARKER. What is the cost of concentrating at plant No. 1?

Doctor PARSONS. That is done by means of absorbing the water with sulphuric acid in special towers and then boiling out the nitric acid.

Mr. PARKER. The sulphuric acid absorbs the water—

Doctor PARSONS (interposing). Then the sulphuric acid with the water in it is again boiled, and the water leaves it, and they use it over and over again.

Mr. PARKER. Is that a cheap process of getting the nitric acid, on the whole, or is it easier to get it by using sulphuric acid and the Chilean nitrates?

Doctor PARSONS. It depends entirely on the price. In this country it is made entirely by the Chilean saltpeter process, and probably will be for some time to come, so long as the Chilean saltpeter is at its present price.

Mr. PARKER. With the Chilean saltpeter at its present price, that will make the nitric acid much cheaper than it is to make it the other way?

Doctor PARSONS. No; I am not prepared to say that. I think it is because in this country they have the nitric acid plants already built, and as I understand it, they do not want to invest the capital to make the change. If I was going to start in to-day to put up a large plant for the manufacture of nitric acid I should do it by the oxidation of ammonia, at the present price.

Mr. PARKER. That process does not need much power, but needs a great deal of steam and coal, does it not?

Doctor PARSONS. That is correct; the Haber process requires only one-tenth of the power of the cyanamid process, and about one-fiftieth of the power of the arc process used in Norway. The Norwegians could profitably turn their plants into plants to use the Haber process, and I think they would use it if it were not for the complications in connection with the German patents.

Mr. PARKER. If you were to use plant No. 1 for the manufacture of fertilizer I suppose you would take the ammonia and pass it through sulphuric acid to make the sulphate?

Doctor PARSONS. That would be the normal procedure at the present time.

Mr. PARKER. And the cheapest way to get sulphate of ammonia?

Doctor PARSONS. The cheapest way to get sulphate of ammonia; but personally I am inclined to believe that we are going to develop other methods, and I should not be at all surprised if this double sulphate and nitrate of ammonia, which is credited with having exploded in Germany, is what will ultimately be used.

Mr. PARKER. You would use that, although they had that tremendous explosion at the plant in Germany.

Doctor PARSONS. I do not think the explosion was due to the composition of the material; I think it was due to some other cause.

Mr. PARKER. I beg your pardon for asking you so many scientific questions, but I thought that was the only way to get the information, both for myself and other members of the committee.

Doctor PARSONS. I am very glad indeed to have your help. I think it will interest you to know something of the action of the catalyst in the oxidation of ammonia. If you take a mixture of ammonia and air and blow it through a layer of platinum gauze which is heated to a red heat, your ammonia and oxygen will combine entirely differently from any other combination which they can be made to make under any other conditions. If you put iron gauze there or copper gauze or silver gauze the action does not take place, but if you use the platinum you can blow it through almost as fast as you can blow it, and practically all of the ammonia will be converted into nitric oxide, which absorbed in water makes nitric acid. We do not know what does it, but we do know that that is the action that takes place. There are many incidents of the kind in connection with chemical products.

Mr. PARKER. The platinum is used to a certain extent for a catalyst, and it is so hard to get at present that I wanted to ask whether this catalyst, which is used by the Department of Agriculture, depended upon platinum for its composition.

Doctor PARSONS. It does not.

Mr. PARKER. Does it depend upon any rare metals that are hard to get?

Doctor PARSONS. I think it does not depend on rare metals only. It is generally known that most of the catalysts, the German catalyst, and I think the General Chemical Co.'s catalyst, and this one at the nitrogen fixation laboratory, are largely iron, and it does—

Mr. PARKER (Interposing). Does it waste very fast?

Doctor PARSONS. No; this is a very substantial catalyst that they have here.

Mr. PARKER. Then as a general conclusion you think, with the aid of the Department of Agriculture, the No. 1 plant, with an expenditure of a million and a half dollars, can be turned into a productive plant for ammonia at reasonable rates.

Doctor PARSONS. I think it can; yes.

Mr. QUIN. Doctor Parsons, with what concern are you connected at his time?

Doctor PARSONS. I have no connection with any concern that has anything to do with the fixation of nitrogen.

Mr. QUIN. In whose interest are you down here?

Doctor PARSONS. I am here at the request of the committee.

Mr. QUIN. When these two nitrate plants at Muscle Shoals were started you were consulted about both of them, but you did not agree to the erection of plant No. 2, as I understand it.

Doctor PARSONS. That is correct.

Mr. QUIN. The evidence shows that plant No. 2, or the method of the fixation of nitrogen by the cyanamid process, had proven to be a success in this country. Why did you gentlemen not think about starting that plant first; because we were at war, and that is what the plant was being built for?

Doctor PARSONS. Because at the time we undertook that there was no present emergency, and we were trying to put in a process which would be capable of being used for fertilizer also, when the war was over.

Mr. QUIN. I would like to refresh your memory on that. I was here at that time; I have been on this committee ever since 1913, and in 1916 we got a bill through providing for the establishment of nitrate plants, and Mr. Washburn's testimony had a good deal to do with it. The cyanamid process was the one that they thought was going to be adopted. Congress declared war at the President's suggestion on the 6th day of April, 1917, and as I understood it, and the Congress understood it, we were in danger of not having sufficient nitrogen from the Chilean source. We did not know whether we would be cut off from that or not, and you claim now that an emergency did not exist. Well, these gentlemen went ahead and built plant No. 1, but it was constructed in such a way that it did not succeed. That is true, is it not?

Doctor PARSONS. Its first trial was not thoroughly successful.

Mr. QUIN. They testified before this committee that that plant was a failure.

Doctor PARSONS. I disagree with them. At its first trial it did not function any more than the Haber plant functioned in Germany in its first trial, and they had to go over it and try it out two or three times and rebuild it before it finally operated fully and successfully.

Mr. QUIN. They abandoned it, did they not?

Doctor PARSONS. No; it was carried on and made a perfect success at Syracuse.

Mr. QUIN. You mean a different plant was erected. There was a difference between the plant at Syracuse and the No. 1 plant at Muscle Shoals.

Doctor PARSONS. The process is essentially the same, but they have changed the mechanical construction, and they have changed the catalyst, as I have already testified.

Mr. QUIN. Why did they not change that and make the process at Muscle Shoals a success?

Doctor PARSONS. Because they had no time before the armistice. They found that the mechanical construction at Muscle Shoals was not right and that the catalyst which they used was inefficient and could not be made in large quantities.

Mr. QUIN. What did they change it for at Muscle Shoals?

Doctor PARSONS. They did not change it at Muscle Shoals.

Mr. QUIN. Some gentlemen testified that by making certain changes in the process that caused the thing to be a failure there. Some of these experts testified that way.

Doctor PARSONS. That by making changes in the General Chemical Co.'s process it ceased to be a failure?

Mr. QUIN. They spoke about the fact that they changed some of the processes in the construction of this plant at Muscle Shoals.

Doctor PARSONS. My understanding is that the plant was built down there the best that they were able to build it after consultation between the General Chemical Co.'s engineers and the engineers of the Government, and that the Government engineers insisted on certain changes in the plant construction which the General Chemical Co.'s engineers did not thoroughly agree to; and as a result, anyway, both of them felt that the other was more or less to blame for the failure of its early operation. But as a result of the experiences which they gained there a new factory has been built which is functioning completely, and functioned well from the first day it turned over its wheels.

Mr. QUIN. Then the one they constructed with Government funds at Muscle Shoals did not turn out the stuff, and the one they erected for themselves did turn it out, and you say they produced several more tons per day than they anticipated.

Doctor PARSONS. The one they erected at Muscle Shoals did not do it, but if they had gone on and made the necessary changes and installed the apparatus which they now have installed at Syracuse it would have functioned; that has been proven by the actual fact that the Syracuse plant is functioning perfectly at the present time.

Mr. QUIN. Then they put in nitrate plant No. 2, after they had experimented with the Haber process. They knew that plant No. 2 would work, did they?

Doctor PARSONS. They did not put in plant No. 2 after they had been experimenting with plant No. 1. Plant No. 1 was barely started when conditions grew worse and the Ordnance Department felt that it was absolutely necessary for the sake of preparedness to push the construction of nitrate plants which would make ammonium nitrate in quantity from the start. We had cyanamid plants on this side of the water, and we knew positively that they could make ammonium nitrate by that method, irrespective of the cost. It was put in as an emergency war measure, and ran from the first day it was completed.

Mr. QUIN. They have testified before this committee that there are new processes now which are liable to knock out both of these processes and produce the nitrogenous products at about one-half of what they are costing now. Do you know about that?

Doctor PARSONS. I think I know all the processes for nitrogen fixation which are at all economical and which are being used in the world, and I do not know to what you refer.

Mr. QUIN. They did not tell us what they are.

Doctor PARSONS. They are referring unquestionably to the improvements in the Haber process, because they are the only ones actually doing it to-day.

Mr. QUIN. Did you read the report of the British Nitrogen Products Commission, appointed for the purpose of looking into the fixation of nitrogen.

Doctor PARSONS. I did, and I read it with care.

Mr. QUIN. In that report, of 1920, that commission, consisting of eminent scientists, doctors of chemistry and kindred subjects, stated several things, and wound up by saying that "the commission recommends that this cyanamid process should be established in Great Britain without delay, either by private enterprise, supported, if necessary, by the Government, or as a public work." What do you say about that report of the British commission?

Doctor PARSONS. I say that the report of the British commission was made during war time. I was in consultation with the most of the members of that committee frequently during the war. I saw them on the other side, and I saw Doctor Harker on this side. I know most of the important men on the commission personally, and some of them intimately.

Mr. QUIN. This was in 1920?

Doctor PARSONS. That is when it was issued, not when it was made. They believed in England that they should put in both processes, so that they would know the operation of each. They also in that report made a recommendation not only for the Haber process, but they spoke in much higher terms for the Haber process than the cyanamid process, and the Haber process is being put in in England to-day, and the cyanamid process has been completely abandoned and will never be put in England or any other country, in my opinion.

Mr. QUIN. Do you not give some weight to Mr. Ford's statement that he could put in and would put in the cheapest process?

Doctor PARSONS. I do not know what Mr. Ford will do. There is nothing to indicate it in the testimony.

Mr. QUIN. His engineer said they can make this stuff 50 per cent cheaper than it is being made now.

Doctor PARSONS. No; Mr. Mayo said 33½ per cent. Mr. Mayo also stated that he had not made any estimate of cost.

Mr. QUIN. They blind themselves to run that plant at its full capacity for fertilizer, and that is what every farmer of this country is interested in, outside of their patriotic spirit for national defense. Do you not think that is true?

Doctor PARSONS. I do not so understand it. I understood from the testimony that they would not run it except at a profit. But I am not arguing against Mr. Ford.

Mr. QUIN. As to what process his engineers might have in mind, you know nothing about that?

Doctor PARSONS. Except as contained in their testimony. I have read that.

Mr. QUIN. There has been a great deal of discussion about the different processes, and about the fertilizer that could be made and about the prices at which it could be made. But I have been looking for somebody to tell us why it is that a cow that is red, that eats green grass, gives white milk. But we have not had that yet. There is not any doubt but what they have got the water which they can dam up to get the horsepower, is there?

Doctor PARSONS. I have every reason to believe they will get the horsepower if they dam the river.

Mr. QUIN. There is no doubt if they get that that they can make the same kind of fertilizer down there that is made elsewhere.

Doctor PARSONS. I think horsepower has but little relation to that.

Mr. QUIN. You think these men are all mistaken?

Doctor PARSONS. I think the farmer has been made a cat's-paw from the beginning to try to get the Muscle Shoals project built. He has been shown a beautiful "mirage" by those who have their own objects to attain.

Mr. QUIN. There are some people who believe in the farmer being taken care of.

Doctor PARSONS. I believe in that, too, most heartily.

Mr. QUIN. Do you not think if you can get that big plant running down there, it will have a salutary effect on the production of fertilizer?

Doctor PARSONS. Not so far as plant No. 2 is concerned. I do not believe Mr. Ford or anyone else can operate plant No. 2 to make fertilizer.

Mr. QUIN. Do you believe Mr. Ford is going to lose his fortune on that proposition?

Doctor PARSONS. I think if Mr. Ford runs plant No. 2 to its capacity to make nitrates, he will lose all his fortune in 20 years. I simply want you to be sure that he will do it.

Mr. QUIN. I do not think Mr. Ford needs any guardian, so far as that it concerned.

Mr. FISHER. How long were you in the employ of the Federal Government?

Doctor PARSONS. From the summer of 1911, August, I think, until the 1st of November 1919.

Mr. FISHER. When the war broke out in Europe, or immediately thereafter, and our Government, through its officials, began to plan a nitrate program. I will ask you whether or not they did not put you on a commission, with your expenses paid, and also paying you a salary, while you traveled all over Europe, examining different types of nitrate plants?

Doctor PARSONS. That is correct.

Mr. FISHER. I will ask you whether or not when you came back you later severed your connection with the Government, and ever since that time, in every single effort that the United States has made to carry out a nitrate program in connection with Muscle Shoals you have volunteered as a witness against the Government.

Doctor PARSONS. I have not. I appeared as a witness. I have been called in before, and I did it before I was out of the Government, and I have not changed my testimony from the first minute, from the time I wrote a report for the Government up to and including to-day.

Mr. FISHER. Doctor, you have always been opposed, have you not, to what the other experts recommended?

Doctor PARSONS. Oh, no; they agreed with me absolutely on the original report, and they adopted my report practically unanimously. That is all in the record.

Mr. FISHER. You appeared before the Senate Committee on Agriculture and opposed the proposition that the Government then presented, did you not?

Doctor PARSONS. I did not. I did not appear before the Senate Committee on Agriculture at all. I was not there.

Mr. FISHER. You did not oppose the proposition when it was before the Committee on Appropriations, to complete the dam?

Doctor PARSONS. In the House—my testimony is here.

Mr. FISHER. Before the House committee.

Doctor PARSONS. Before the House committee I did not oppose the building of the dam on the basis of the power being used for the development of industries in the South. I am not opposed to it to-day; I am in favor of it to-day.

Mr. FISHER. Whenever the Government connects the completion of the dam with the manufacture of nitrates or fertilizer, then you oppose it?

Doctor PARSONS. I have always stated, and I so state now, that the idea of building or completing Dam No. 2 with the idea of using that power through the cyanamid process for the fixation of nitrogen, if that is the idea, is a false idea and will not lead to the conclusion you expect.

Mr. FISHER. When you testified before the Committee on Appropriations of the House on the sundry civil appropriation bill, when the proposition of completing the dam was being considered, you stated that the Atmospheric Nitrogen Corp. at Syracuse, N. Y., had a process which they perfected. Have they ever manufactured nitrate by that process?

Doctor PARSONS. They have run it successfully from the day it started operation up to the present time. That plant was built for an output of 10 tons per day, and it has turned out 12 tons per day practically continuously from the day the first wheel turned over.

Mr. FISHER. Is that concern owned in part by the Solvay Co.?

Doctor PARSONS. No; the Semet-Solvay Co.

Mr. FISHER. Are they all American citizens?

Doctor PARSONS. To the best of my knowledge and belief, yes.

Mr. FISHER. The Solvays are all American citizens?

Doctor PARSONS. In this country?

Mr. FISHER. I mean the stockholders.

Doctor PARSONS. As far as I know. It may be that the Belgian—it is the Semet-Solvay Co. and the General Chemical Co. that own this plant, not the Solvay. The Solvay Process Co. was originally a Belgian company. They started a subcompany in this country to produce sodium carbonate. Some of its stock is still held in Belgium probably, but it has never been questioned as to the ownership of its stock in any essential at any time by the Allen Property Custodian or others. The Semet-Solvay, I think, is not owned in Belgium, or at least I never heard that it was. The General Chemical Co. is an almost completely American company, started and developed in this country by an American capital, and none but Americans control its affairs, so far as I know.

Mr. FISHER. When you appeared before the House Committee on Appropriations in opposition to the appropriation for the completion of the dam there was no other question before that committee at that time except the completion of the dam, but you still opposed the appropriation.

Doctor PARSONS. I opposed it simply and solely on the basis of its being used for the fixation of nitrogen; that it was not warranted for, and I directly and definitely stated that I agreed entirely with Colonel Cooper that it should be completed as a dam for the industrial development of the South.

Mr. FISHER. Did you not have it stated to you at that hearing that the only question that they had for decision was in connection with the money asked for the completion of the dam?

Doctor PARSONS. I think Mr. Byrns did make that statement, and I told him, as all the testimony shows, that the whole thing that the bill was being put through Congress for was to carry out plans for the so-called nitrogen corporation. This proposed corporation was to be run by the Government, without taxes, without interest, without amortization, and entirely freed from the trust laws, in competition with American industry, putting the Government in business in a way that it has never been in business before. I did not believe in the dam being completed for any such purpose, but if the completion of the dam was to be for the benefit of public utilities, selling the power to the cities around, or

selling it to any chemical or metallurgical industry that was down there. I was entirely in favor of it, and I am to-day.

Furthermore, I think it is perfectly possible to make a nitrogen fixation industry at Muscle Shoals which will be a thoroughly successful industry and which will do a good deal of what hope it will do for the farmer, if you will do it right. But if you are going to bring it into politics the way it has been done, it will never help the farmer on the basis of running plant No. 2, and getting away from the power proposition.

If you would like to know what I think should be done, I shall be glad to give an outline of it to you.

Mr. FISHER. I will be glad to have it.

Doctor PARSONS. I think the Government should first find out what it has to sell and then having found that out it can put this before the people of the country and offer it to them for bids and sell it to the highest bidder, who will put it through for the purposes you want.

Mr. FISHER. Are you not aware of the fact that the Secretary of War, through the Chief of Engineers, communicated with every concern in the United States which he thought was interested in the development of Muscle Shoals?

Doctor PARSONS. As I read it, he asked them what they thought should be done with it, and whether they had any suggestions to make, and one or two of them did make suggestions. It has never been formulated as to what you had to sell, and nobody knows to-day what you have to sell down there, and the minute it is known what you have to sell I think you will get offers for it. I think if plant No. 1 was put up for sale, with a certain amount of power to go with it, I could myself obtain associates and make a nitrogen industry down there along modern lines, the same as they are doing in Germany, the same as they have started to do in Norway, the same as they are doing in England, and just as they are planning to do in France, and in Italy, and as they have started to do at Syracuse, which will fix nitrogen and make nitrogen fertilizer much cheaper than you will ever get it by any possible use of the cyanamid process. I think it can be done successfully.

Mr. FISHER. The trouble is that the Secretary of War has not received any offers except the ones we are now considering.

Doctor PARSONS. Nobody can make an offer, because they do not know what they are offering for. They are all tied up with lawsuits and politics, and you do not know what you can make an offer for.

Mr. FISHER. Do you know of any other concern than those who have made the offers we are now considering have communicated with the War Department, or with the Chief of Engineers, to find out what the Government has to sell?

Doctor PARSONS. They have considered the situation, and I do not think you will get any more offers as long as it is tied up with the political situation as it is at the present day.

Mr. WRIGHT. Doctor, you think probably there will be something developed by which the production of commercial fertilizer will be greatly reduced in price?

Doctor PARSONS. I beg your pardon.

Mr. WRIGHT. You think there will be some art or arts developed which will greatly reduce the price of commercial fertilizers?

Doctor PARSONS. I hope so. Fertilizer at the present time, or rather fertilizer constituents, are cheaper than they have been, I think, in the history of the world; at least some of them are.

Mr. WRIGHT. Conditions are not normal now.

Doctor PARSONS. I do not expect to see much advance from present conditions, if they are not normal. I think that Germany having a surplus and increasing as she is increasing, that before very long nitrogen compounds will be imported in fact, they are now from abroad. I think we are going to have competition which will keep down the price of ammonium sulphate.

Mr. WRIGHT. Upon the whole, you think the art will be developed by which the cost of production will be decreased in price?

Doctor PARSONS. I have every reason to think so. I believe in progress.

Mr. WRIGHT. But you do not think that can be done by the cyanamid process?

Doctor PARSONS. I never was more certain of anything in my life than I am of that.

Mr. WRIGHT. I understand the Ford offer is based on using the cyanamid process?

Doctor PARSONS. So he states—at plant No. 2.

Mr. WRIGHT. Let me call your attention to section 14 of the Ford offer as modified. I will read it to you as it has been modified. It says: "The company agrees

to operate nitrate plant No. 2 at the approximate annual capacity of its machinery and equipment in the production of nitrogen and other commercial fertilizers (said capacity being equal to approximately 110,000 tons of ammonium nitrate per annum) throughout the lease period, except as it may be prevented by strikes, accidents, fires, or other causes beyond its control; and further agrees (a) to determine by research whether by means of electric furnace methods and industrial chemistry there may be produced on a commercial scale fertilizer compounds of higher grade and at lower prices than fertilizer-using farmers have in the past been able to obtain, and to determine whether in a broad way the application of electricity and industrial chemistry may accomplish for the agricultural industry of the country what they have economically accomplished for the other industries, and if so found and determined to reasonably employ such improved methods."

Doctor PARSONS. How does that differ from the original? It sounds pretty much the same to me.

Mr. WRIGHT. The only change is in line 2 of that section, striking out the word "compounds" and using the word "fertilizer" and inserting the word "commercial" before the word "fertilizer," and then there is added to subsection (a) of section 14 this language, "and if so found and determined, to reasonably employ such improved methods."

Doctor PARSONS. I can not see any essential difference between that and the original. It is the other clauses in there which make the basic difficulty in the whole situation.

Mr. WRIGHT. That is the stumbling block to you.

Doctor PARSONS. No; there is the testimony that they will not do it unless they can do it at a profit.

Mr. WRIGHT. I am drawing your attention to what processes Mr. Ford is going to use under this offer. I want to know if you insist that he is confined to the cyanamid process?

Doctor PARSONS. I say in plant No. 2, yes; and he has stated that plant No. 1 is going to be converted into an automobile factory.

Mr. WRIGHT. Let us see what he offers about plant No. 2 as modified. Section 14 provides that he agrees to operate the plant at the approximate annual capacity, and that is followed by subsection (a) in these words, "to determine by research whether by means of electric-furnace methods and industrial chemistry there may be produced on a commercial scale fertilizer compounds of higher grade and at lower prices than fertilizer-using farmers have in the past been able to obtain, and to determine whether in a broad way the application of electricity and industrial chemistry may accomplish for the agricultural industry of the country what they have economically accomplished for the other industries, and if so found and determined, to reasonably employ such methods."

Doctor PARSONS. I think that is highly desirable, but he promised to conduct this research in the first place.

Mr. WRIGHT. That is part of his agreement?

Doctor PARSONS. Certainly.

Mr. WRIGHT. Then he is not confined to the cyanamid process, is he, in the operation of plant No. 2?

Doctor PARSONS. Yes; because plant No. 2 was only built for the cyanamid process and can not be converted into anything else for the fixation of nitrogen. I do not deny that this is quite possible that those carbide furnaces might be used as Mr. Swann told you, for the conversion of certain phosphoric rocks into concentrated phosphoric acid, but that is a question for the future to determine. We are at the present time profitably spending a good deal of money through the Bureau of Soils and through the Nitrogen Fixation Laboratory for certain purposes along those lines. The Bureau of Soils has been working for some time on the production of phosphoric acid by electric-furnace methods, and they have made a great deal of progress, which is being utilized in three plants in this country, two of them running and one closed down.

Mr. WRIGHT. Your whole testimony is based on the proposition that Mr. Ford's offer only contemplates the manufacture of commercial fertilizer or compounds by the use of nitrate plant No. 2, which uses the cyanamid method and employs the cyanamid method.

Doctor PARSONS. My testimony has not been so directed at all, although you may think so. My testimony has been, so far as possible, to explain to you the technical processes for the fixation of nitrogen.

Mr. WRIGHT. I will say as far as your testimony relates to this provision of the Ford contract.

Doctor PARSONS. My testimony is that plant No. 2 can not be utilized for the fixation of nitrogen commercially and can not be converted into any other known process or any process which is even in sight for the fixing of nitrogen.

Mr. WRIGHT. Except by the use of the cyanamid method.

Doctor PARSONS. By the use of the cyanamid method or any other method.

Mr. WRIGHT. You construe the offer to mean that he is going to confine himself to the cyanamid method in the operation of plant No. 2.

Doctor PARSONS. If he is going to fix nitrogen at plant No. 2, that is the only method he can use. I am not talking about the other things he may develop in phosphoric acid and potash and other schemes, which may be visionary or may turn out to be practical.

Mr. WRIGHT. What I want you to see, if I can, is that in addition to its positive offer to operate plant No. 2 at the approximate present annual capacity of its machinery and equipment in the production of nitrogen and other commercial fertilizers on the basis of 110,000 tons a year, he further agrees to "determine by research whether by means of electric-furnace methods and industrial chemistry" that these ingredients can be produced on a more economical basis; and if he so finds, to employ those methods. That would cover your objection, would it not?

Doctor PARSONS. No; if you turn that power over to him I want you to get from him some kind of an agreement that he will do it.

Mr. WRIGHT. I am talking about the manufacture of fertilizer compounds. I am not talking about power.

Doctor PARSONS. I do not think you have any assurance whatsoever that you are going to get any commercial fertilizer compounds, and my opinion is that before that immensely valuable project is turned away from the people of the United States you should have some definite assurance or contract that can not be questioned.

Mr. WRIGHT. You do not think it is a good thing?

Doctor PARSONS. I can not see that it is.

Mr. WRIGHT. Although he agrees to operate the plant at its present annual capacity and agrees further that he will determine by research whether the cost can be reduced by any kind of new method, and if it can be he will employ that method?

Doctor PARSONS. He does not so agree. There is another proposition in there in reference to "other causes," or something like that.

Mr. WRIGHT. You said this morning that you were not a lawyer.

Doctor PARSONS. I am not.

Mr. WRIGHT. And you would not care to be catechized about legal or financial questions or in reference to the construction of the contract?

Doctor PARSONS. I said about legal questions of the construction of the contract I did not think my opinion would be of any value.

Mr. WRIGHT. These words over which you stumble so much are the words in section 14, where it says, "except as it may be prevented by strikes, accidents, fires, or other causes beyond its control." Those words do not mean and can not mean that he is confined to that process in the making of ingredients. Those words are simply intended to include those things that no human agency can control, or probably can not control, such as strikes, fires, or accidents; and the words "other causes beyond its control" are all of that same class of words along the same line of meaning.

Doctor PARSONS. I interpreted it just the way Mr. Mayo interpreted it, and Secretary Weeks, and as the Secretary of Agriculture and all who have looked into the situation from an absolutely unbiased standpoint evidently interpreted it, and I think they see it as I see it.

Mr. WRIGHT. I presume one might reasonably infer you are against the Ford offer?

Dr. PARSONS. As it stands; yes sir. I think you can better it very greatly.

Mr. WRIGHT. What is that substance that you assume is going to be turned into the river and destroy navigation?

Doctor PARSONS. It is the sludge that comes from the conversion of the cyanamid and ammonia.

Mr. WRIGHT. Do you not think that a place has been provided to care for that, besides putting it into the river?

Doctor PARSONS. No; I do not, to that extent.

Mr. WRIGHT. That it has been thought would relieve that condition?

Doctor PARSONS. If you have provided for 300,000 cubic yards for some years; yes.

Mr. STOLL. Where is your office?

Doctor PARSONS. No. 1709 G Street, Washington.

Mr. STOLL. Have you attended many of these hearings?

Doctor PARSONS. Here?

Mr. STOLL. Yes.

Doctor PARSONS. No, sir.

Mr. STOLL. Any of them?

Doctor PARSONS. I came here to hear Mr. Swann's testimony, and incidentally, as he was delayed, while I was waiting to hear his testimony I heard certain of the other testimony, and I have read certain parts of that which you have had printed since.

Mr. STOLL. Are you connected with any fertilizer companies?

Doctor PARSONS. I am not, directly or indirectly.

Mr. WRIGHT. There is one question I forgot to ask. I believe all scientific men differ widely on these scientific questions.

Doctor PARSONS. I do not think scientific men differ at all on the Haber process to-day.

Mr. WRIGHT. Is not that characteristic of scientific men?

Doctor PARSONS. We are human beings like everybody else.

Mr. WRIGHT. Did you ever see two doctors who would agree about any given proposition?

Doctor PARSONS. Medicine is not an exact science—chemistry is.

Mr. WRIGHT. You are an expert, are you not?

Doctor PARSONS. You will have to judge that for yourself.

Mr. WRIGHT. Is it not a fact that they do not ever agree—and I am not saying anything to their discredit—but on a proposition like this, for instance, you say that the cyanamid process is obsolete, and that the Haber process is the correct process; while a man, who is just as eminent as you, would follow you on the stand and he would swear that the Haber process was impracticable and the cyanamid process was the only one that was feasible.

Doctor PARSONS. I would like to find one in America that will say that at the present time—who is still sane.

Mr. WRIGHT. I do not think you will ever get two of them that will agree.

Mr. MILLER. I see in the British Nitrate Commission's report that they speak very highly of the arc process or the electric process. That makes nitric acid, does it?

Doctor PARSONS. Yes; that is one of the basic reasons why it is not used in this country; and also it is very wasteful of power. It uses five times as much power as the cyanamid process, and it uses approximately 50 times as much power as the Haber process. If it was not for the Haber patents—and, I think, I have a basis for this statement (it can not be used in Norway, although it can be used in the United States)—I think the arc process in Norway would be changed into the Haber process in a year, because they could use their water power and make their hydrogen electrolytically, and they could turn out five times the amount of nitrogen, in ammonium salts instead of nitrates, than they can to-day, and do it cheaper.

Mr. MILLER. There are two of those plants in my country in the far West: The American Nitrogen Products Co., with a small plant at a place called La Grange; and another one near Vancouver; and, I think, they are very successful.

Doctor PARSONS. I think one of them has operated; and I think it was successfully operated on sodium nitrate, which was taken by the dye industry several years ago; but at the present time there is no market, because the Germans are sending it in. I do not think that they have ever sold nitric acid extensively commercially or ammonium nitrate for fertilizer purposes or any fertilizer constituents to any extent or have any expectation of doing so.

Mr. MILLER. I know they are shipping nitric acid in tank cars out there.

Doctor PARSONS. You have a limited market on the Pacific coast for nitric acid, which, if that plant is small, it can probably take for awhile.

Mr. McKENZIE. The cost of plant No. 2 is something like \$87,000,000, I believe?

Doctor PARSONS. \$89,000,000, and a little over.

Mr. McKENZIE. Are you familiar with the so-called Alabama Power Co.'s offer?

Doctor PARSONS. I have not read it; but I have heard just about this: That the offer comprises an offer to complete the dam without cost to the Govern-

ment, on a 50-year basis, and that they are to give the Government 100,000 horsepower. Beyond that I have no knowledge of the offer. I have not read it; I do not know a single officer of the Alabama Power Co. personally, and I do not know any of them by sight, except Mr. Martin, and I would not have known him except that he happened to stand up and answer a question on the day that Mr. Swann's testimony was given, just before Mr. Swann testified.

Mr. McKENZIE. You understand that under that offer the Government retains these two plants, No. 1 and No. 2?

Doctor PARSONS. Yes, sir.

Mr. McKENZIE. Did you hear Mr. Martin's testimony, in which he stated that they have been approached or had some information that certain companies would be willing to take over these plants and operate; when he was questioned as to whether the Government would be at a great disadvantage?

Doctor PARSONS. I did not hear his testimony. I did not know he made that statement. I have not read his testimony.

Mr. McKENZIE. I think it is true that he made the statement substantially as I have put it in the record. According to your testimony you look upon plant No. 2 as merely junk and think that it is absolutely worthless so far as a manufacturing, going plant is concerned.

Doctor PARSONS. Yes on the last statement; no on your first statement. I think plant No. 2 should be left for some time until we have our commercial plants in the country prepared to turn out nitrogen; in view of possible emergency plant No. 2 should be kept available for the production of raw material for explosives. I think that very strongly.

Mr. McKENZIE. But it is your contention, however, that it would be impossible for any company to undertake to successfully manufacture nitrates at that plant?

Doctor PARSONS. That is very strongly my opinion; yes, sir.

Mr. McKENZIE. Then, as a matter of fact, if the Alabama Power Co.'s offer should be accepted you think that the Government would simply have that plant standing there without ever being operated at all.

Doctor PARSONS. I think so, unless they might possibly operate it for calcium carbide. You might possibly do that, which would enable you to pay all the expenses in connection therewith. That is, a certain amount of calcium carbide would be taken in the South for the manufacture of acetylene gas for autogenous welding. For that purpose you might utilize that plant and have it pay for its upkeep.

Mr. McKENZIE. But do not operate it as a plant for fertilizer production.

Doctor PARSONS. I think the other hundred thousand horsepower should be used, and could be used to very great advantage; I think it might be used in the electrolysis of water, which would help plant No. 1 to obtain the hydrogen.

There is a little calculation I have made showing what interest it might be possible to obtain from the hundred thousand horsepower which is unquestionably salable by the Government. The estimates which the Ordnance Department put in are based on three-quarters of a mill per kilowatt hour. If you sell that horsepower for three-quarters of a mill on the average, it amounts to \$657,000 a year, and if you take that \$657,000 a year and put it in a sinking fund as the smaller sum which Mr. Ford offers is suggested to be put into a sinking fund, that \$657,000, in 94 years at 4 per cent compounded, as given in the Secretary of War's report, would be equal to \$676,572,030, instead of \$40,000,000, which the other one would amount to on exactly the same basis. At 5 per cent interest it would be over \$1,200,000,000.

Mr. McKENZIE. You have in mind the offer of the Alabama Power Co.?

Doctor PARSONS. No; I have in mind the question of the sale of 100,000 horsepower. I do not care whether the Alabama Power Co. sells it or anybody else. You can sell it, and I think it is perfectly salable at that figure.

Mr. McKENZIE. The Alabama Power Co. only offers to give to the Government 100,000 secondary horsepower.

Doctor PARSONS. I am talking about the first secondary horsepower. In the testimony before the sundry civil subcommittee of the Committee on Appropriations in February, 1921, Colonel Cooper estimated secondary horsepower at 1.2 mills, and the primary horsepower at 4.4 mills, and I am putting this at three-quarters of a mill. I say I think you would have no difficulty in selling it at that price.

Mr. McKENZIE. You have given us some startling figures in connection with this proposition. What do you say it would cost the Government, or Mr. Ford, or anyone else, to transform plant No. 2 from a cyanamid plant?

Doctor PARSONS. Plant No. 2 can not be transformed without transforming it from the ground up, or building a new one, or transferring it from the ground on which it stands and building a new one.

Mr. MCKENZIE. How does it injure the ground.

Doctor PARSONS. The plant is not prepared for it. There are a few things in it which could be used; for example, the power line, and a small portion of the liquid-air plant, and one or two minor things might be used in the Haber process later, but the furnace building can't be, nor would there be any use for the auto-clave plant or the cyanamid plant. The ammonium nitrate plant could be used the same as at plant No. 1 for the production of ammonium nitrate. I think, furthermore, that anyone purchasing plant No. 1 should eliminate from plant No. 1 every particle of machinery with which the General Chemical Co. designed, so that they could get rid of any possible lawsuits or difficulties.

Mr. MCKENZIE. How much did you say it would cost to change plant No. 1 so it would be an up-to-date plant for the manufacture of this product under the modified Haber process?

Doctor PARSONS. I believe plant No. 1 can be converted into a plant which would operate successfully, perhaps, on a 30-ton basis, the original basis of the plant, for between one and a half and two million dollars.

Mr. MCKENZIE. I want to ask you just one question in conclusion. Are we to understand that if we accept the Ford offer, or the offer of the Alabama Power Co., that the Government would lose this \$1,200,000,000?

Doctor PARSONS. I have not said the Government was going to make this money. The Government is not in the habit of putting its money in a sinking fund and keeping it for 94 years and compounding it semiannually, as the plan proposed in the Ford offer would do, according to the statement prepared by the Secretary of War. I simply said that there was a comparison; Mr. Ford has spoken of a sinking fund of \$40,000 annually on Dam No. 2. Here is another sinking fund, identically parallel, of \$657,000 incurred annually from Dam No. 2, which, if you do the same thing with it, would amount to that money in that time. But I do not think the Government is going to do it.

Mr. MCKENZIE. If we got the power, then we could sell the power and keep the fund together that length of time, putting all those things together; that is what it would amount to?

Doctor PARSONS. It would amount to that, taken exactly from the Secretary of War's figures. If you take that figure of \$19,868, counting it for 94 years, as given by him, it amounts to \$40,919,798, and you will find by division that \$1 semiannually in 94 years amounts to \$2,059.58. If you multiply one-half of \$657,000 by that figure, you will get the figure I gave you, \$676,572,030, and the figures are right, because I had somebody else check them, and I know they are right.

Mr. MCKENZIE. We are very much obliged to you for the testimony you have given us, and the committee will now stand adjourned, subject to the call of the chairman.

(Thereupon the committee adjourned, subject to the call of the chairman.)

APPENDIX A.

Mr. Cooper is an associate of Stone & Webster (Inc.) as vice president and a director of the Mississippi River Power Co., which sells power to St. Louis, East St. Louis, Hannibal, Alton, Quincy, Burlington, Fort Madison, Keokuk, and adjacent territory. It is one of the largest hydroelectric plants in the world.

Other Stone & Webster Co. (Inc.) properties are: Baton Rouge Electric Co.; Blackstone Valley Gas & Electric Co.; Cape Breton Electric Co. (Ltd.); Central Mississippi Valley electric properties; Columbus Electric Co.; Columbus Power Co.; Columbus Railroad Co.; Connecticut Power Co.; Dallas City, Illinois, Light Co.; Eastern Texas Electric Co.; Edison Electric Illuminating Co., Brockton; Edison Light & Power Co., Abingdon and Rockland; El Paso Electric Co.; Fall River Gas Works Co.; Fort Madison, Iowa, Electric Co.; Galveston Electric Co.; Galveston, Haston Electric Co.; Galveston, Haston Electric Railway Co.; Haverhill Gas Light Co.; Houghton County Electric Light Co.; Houghton Electric Traction Co.; Key West Electric Co.; Lowell Electric Light Corporation; Millerton Electric Light Co.; Mississippi River Power Co.; North Texas Electric Co.; North Texas Traction Co.; Nova Scotia Tramway & Power Co. (Ltd.); Pacific Northwest Traction Co.; Paducah Electric Co.; Pawtucket Gas Co., New Jersey; Ponce Electric Co.; Public Service Investment Co.; Puget Sound Electric Railway; Puget Sound Interurban Railway & Power Co.; Puget Sound Power & Light Co.; Reno Power, Light & Water Co.; Savannah Electric Co.; Savannah Power Co.; Sierra Pacific Electric Co.; Sydney & Glace Bay Railway Co. (Ltd.); Tacoma Railway & Power Co.; Tampa Electric Co.; Tarrant County Traction Co.; and Trucker River General Electric Co.

APPENDIX B.

COPY OF PROPOSED AMENDED CONTRACT FOR COMPLETION AND LEASE OF MUSCLE SHOALS BY FREDERICK E. ENGSTRUM.

THE ENGSTRUM PROPOSAL TO LEASE MUSCLE SHOALS.

WAR DEPARTMENT,
Washington, February 24, 1922.

DEAR MR. SPEAKER: I inclose herewith an offer for the Muscle Shoals properties submitted by Frederick E. Engstrum which I think should be considered in connection with the investigations now being made by Congress.

JOHN W. WEEKS,
Secretary of War.

The SPEAKER OF THE HOUSE OF REPRESENTATIVES.

Amended Form of Proposed Contract for Completion and Lease of Muscle Shoals Project by Frederick E. Engstrum.

[Omit the words struck through and insert the words printed in italics.]

1. PARTIES.—Memoranda of contract made this — day of —, 1922, by and between the Government of the United States, party of the first part, and hereinafter referred to as the Government, and Frederick E. Engstrum, of the city of Washington, D. C., for and in behalf of a corporation to be formed by him to carry out the provisions of this contract and to be governed by a board of seven directors, one to be selected by the Secretary of War, one by the Secretary of Agriculture, and the remaining five by proponent, party of the second part, and hereinafter referred to as the lessee.

2. LEASE.—The lessee hereby leases all the property—real, personal, or mixed—now owned or hereafter acquired by the Government in connection with or forming

part of, ~~or the possession, use, construction, maintenance, operation, or extension~~ of the Muscle Shoals project, or any part or appurtenance thereof, ~~including~~ *excluding* the steam plant, located at Gorgas, Ala., on the Warrior River, ~~together with, but including the transmission lines from said plant to Muscle Shoals for use at present location or elsewhere as will best serve the purposes of this lease. Said property is included or intended to be included in the maps, deeds, descriptions, invoices, lists, and schedules furnished to the lessee by the Government and receipted for and such maps, deeds, descriptions, invoices, lists, and schedules, together with receipts for same, herein-after referred to as the schedule, shall be a part of this agreement and shall bind both parties as truly as if they were written herein.~~

3. TERM.—This lease is to continue in full force for a period of 50 years from date the lessee acquires possession of the property. The lessee shall return said property at the termination of this lease to the Government in good operating condition, subject to damage beyond fault or control of the lessee.

4. PLANS AND SPECIFICATIONS.—It is mutually agreed by both the Government and the lessee that, for and in consideration of the lease, construction, operation, rights, privileges, payments, and other considerations hereinafter mentioned or otherwise provided for in this agreement, that the lessee will construct Dam No. 2, power station, *steam plant No. 2 to a capacity of 90,000 K. W. and steam plant No. 1 to a capacity of 10,000 K. W.* and such other structures now under construction or agreed to be constructed at Muscle Shoals, on the Tennessee River, in the State of Alabama, and hereinafter referred to as the "Property," as are set forth and described more particularly in the maps, plans, specifications, photographs, and other engineering data (hereinafter referred to as the plans), copies of which have been delivered to lessee and duly receipted for by lessee, and such plans thus receipted for are hereby made an essential part of this contract and are as binding on both parties as if they were fully set forth and written herein. When the Government shall require the construction of Dam No. 3, for which there are no complete engineering plans, the lessee agrees ~~and is~~ to build the same on plans and specifications to be prepared by the Government and on a location to be approved by the Government. ~~and the lessee will lease the same under the terms of this contract.~~ *Lessee also agrees to build, at dam No. 3, another nitrate plant, of the most improved process, by plans and specifications submitted to and approved by the Secretary of War and the Secretary of Agriculture, which plant shall have the same relative output capacity to the power to be generated at dam No. 3, as is the combined capacity of nitrate plants Nos. 1 and 2 to the power to be generated at dam No. 2; other dams and nitrate plants, which may be built, to conform to the same terms.*

5. LOCKS OR LIFTS.—It is further agreed that the lessee will construct for the Government the locks or lifts for the purpose of maintaining navigation over the dam or dams to be constructed at Muscle Shoals.

6. ~~MANUFACTURE OF NITRATES.~~—~~The lessee agrees to operate the nitrate plants, now a part of the property (which have an estimated capacity of 120,000 tons per annum), together with other plants that may hereinafter be built, to manufacture such fertilizer compounds or mixtures and complete fertilizers as approved by the Secretary of Agriculture, and to commence operation of one plant within one year after it acquires possession, and as soon as sufficient power is generated by the hydro-electric plants belonging to the property, it will operate at full capacity all the plants that can be operated from the receipts of the sale of the fertilizer compounds, together with the receipts from one mill per kilowatt hour, from sale of all power generated in excess of that required to operate the plants.~~

6. MANUFACTURE OF NITRATES.—When the two nitrate plants, now a part of the property, which plants have an estimated capacity of 120,000 tons of ammonium nitrate per annum, have been redesigned and reconstructed as herein provided to manufacture such nitrates as are needed for commercial fertilizers, fertilizer compounds or mixtures as approved by the Secretary of Agriculture, the lessee agrees to operate said plants under the following conditions: As soon as adequate hydro-electric power, generated at dam No. 2 becomes available, lessee will commence to operate both plants and will continue such operation to the capacity they can be operated, after deducting operating expenses, from the receipts of the sale of:

- (a) Nitrates and fertilizer compounds,
- (b) Seventy-five per cent of all marketable by-products not required for the manufacture of nitrates or fertilizer compounds,
- (c) 66.2-3% of all power generated in excess of that required to operate the plants, which is sold by lessee either to itself or to other parties, provided that the price at which power, if any, is sold to lessee is subject to approval by the Secretary of War.

The term "Operating expenses" as used herein shall be understood to include the necessary and legitimate expenses for the proper operation of the entire plant for the purposes

set forth in this agreement, including maintenance, alteration, repairs and replacements but not including the salaries of officers, directors, general manager, supervising engineer and counsel fees of the operating company, the lessee.

When additional dams and nitrate plants shall have been built, they shall be operated by the lessee under the same terms, except that the percentage of receipts from the excess power sold from such dam or dams, which is to be turned into the fund for the operating of such plants or to be paid into the treasury, as the case may be, shall be 75% thereof instead of 66 2-3% of such power from Dam No. 2 (as provided in subparagraph (c) above) and shall be in addition thereto.

7. ALTERATIONS OF NITRATE PLANTS.—It is also agreed that the lessee will make such alterations, additions, or changes in the nitrate plants as may be required to produce the nitrates or other fertilizer compounds approved by the Secretary of Agriculture, and to be completed within the time required to produce hydro-electric power at Dam No. 2. After the plants have been put in operation under this lease the lessee shall make such additions or changes, from time to time, as may be necessary to produce the required fertilizer or fertilizer compounds approved by the Secretary of Agriculture, and such changes and the cost of producing complete fertilizers, are to be made as an operating charge from the funds on hand derived from the sale of fertilizer compounds, and the power not required to operate the plant.

8. PLANS OF ALTERATIONS.—It is agreed that the lessee will furnish the Secretary of War copies of the plans and specifications of the proposed changes to be made in the nitrate plants to fit them to produce the nitrates and fertilizer compounds approved by the Secretary of Agriculture. Such alterations are to be so designed as to keep the nitrate plant No. 2 in condition to produce explosive compounds with the least delay and expense.

9. RESEARCH.—The lessee agrees to maintain and operate a research department in cooperation with the Agriculture Department of the Government, for the purpose of developing the processes for the fixation of atmospheric nitrogen, the cost of research work to be charged to operating expenses of the plant.

10. CONSTRUCTION.—Lessee agrees to begin construction within 60 days from the a reasonable time after it is given possession of the property and to continue such construction in a diligent, business, and workmanlike manner until all construction work provided for under this contract shall be completed, according to terms herein-after set forth, within three years from the time of possession, reasonable extension of time to be granted for delays over which the lessee has no control.

11. CHANGES.—It is further agreed that at any time during the construction, if, in the opinion of either party herein, the structures provided for in the plans have become, or are liable to become weak, dangerous, uncertain, or inefficient, they may request changes, extensions, or additions to be made in the plans for the purpose of increasing the strength, stability, duty, endurance, or efficiency of the dams, locks, power stations, or other structures to be built by lessee under provisions of this contract, such changes, extensions, or additions shall be submitted to the engineer representing the other party and to the surety company furnishing the bond of the lessee, and if such changes, extensions, or additions shall be approved by the engineer representing the other party and the surety company they are to become a part of this contract and become as binding on both parties, and the bonds of the lessee, as if originally written herein.

12. ARBITRATION.—It is also provided that, in event a request of either party for changes, extensions, or additions in the plans for any of the purposes set forth in the foregoing paragraph of this contract has been approved by the surety on the bond of the lessee, and has not been approved by the engineer representing the other party, then the questions of endurance or strength of such material or members as can be determined by physical test shall be submitted to the United States Bureau of Standards for final determination, and all questions as to the effect of the proposed changes, extensions, or additions upon the increase of strength, stability, duty, endurance, or efficiency of the dams, locks, power stations, or other structures to be built under this agreement, the plans for the changes as requested shall be submitted to the engineering faculty, or such members thereof who will undertake the work, of one or both of the following-named universities or schools of technology: Massachusetts Institute of Technology, Cambridge, Mass.; Cornell University, Ithaca, N. Y.; and the report of such faculty or faculties, if submitted to more than one, together with the report of the Bureau of Standards, shall be final, and if such report of the Bureau of Standards and faculties of technical schools, mentioned herein, show that the proposed changes, extensions, or additions, will materially increase the strength, stability, duty, endurance, or efficiency of the structures affected by the changes, extensions, or additions, then such changes, extensions, or additions shall become a part of the working plans of this contract, the same as if they were originally written herein, or had been approved by the engineers of both parties and the surety bond.

13. **COSTS OF TESTS.**—It is also understood and agreed that the cost of testing, consulting, or other expenses caused by the request for changes in the plans, as provided for, shall be a part of the construction cost provided herein.

14. **REPRESENTATIVES.**—It is understood and agreed that during the time of construction that both parties hereto shall designate an engineer to represent them on the work and the acts of such engineer shall be binding as to the party designating him as a representative.

15. **INVESTMENT.**—It is agreed that the lessee will not be required to invest in the manufacture of nitrates or other fertilizer compounds any money, other than that received from the sale of the products of the nitrate plants plus 1 mill per kilowatt-hour received from the sale of power in excess of that required to operate the plant sources enumerated in paragraph 6. The lessee agrees, however, to advance all the money that may be necessary for "operating expenses" until sufficient funds are received from the sources enumerated in paragraph 6; the said money so advanced to be reimbursed as soon as practicable.

16. **SALE OF PRODUCTS.**—It is further agreed that the lessee will sell all fertilizer nitrates and fertilizer compounds produced by the plant at prices and on conditions and terms approved by the Secretary of Agriculture, and also will sell all by-products not required in the manufacture of fertilizer compounds, for which there is a market, and all excess power for which there is a market; it being understood and agreed that primary power may be sold and the nitrate plants may be operated by secondary power to the extent that the same can be done to assure the best financial returns for the operation of the plant and to produce a maximum of nitrates and fertilizers under this contract.

17. **ADDITIONAL PLANTS.**—It is further agreed that in event the development of power for use and sale from this plant, together with the receipts from the sale of products, should be insufficient to produce the amount of fertilizer compounds required to supply the demands, the lessee agrees to construct, under the terms of this agreement, other power plants or storage reservoirs, upon sites owned by the Government and selected by the Secretary of War and itself, said plants or storage reservoirs to be constructed and operated under the general terms of this agreement for the purpose of enabling it to provide the fertilizer compounds to meet growing needs.

18. **PROFITS FROM NITRATES.**—It is also further agreed that when nitrates can be made at a profit or when the cost of the same has been so reduced that the funds arising from the sale of excess power and fertilizer compounds are not needed in whole or in part for financing such productions as herein provided, the said funds shall be paid by the lessee into the Treasury of the United States.

18. **PROFITS FROM NITRATES.**—It is further agreed that when nitrates for fertilizers and fertilizer compounds can be made at a profit, or when the cost of the same has been so reduced that the funds arising from the sources enumerated in paragraph 6 are not needed in whole, or in part, for financing such productions as herein stated, the said funds, not needed for operating expenses, shall be paid by the lessee into the Treasury of the United States. When said funds paid into the Treasury shall be in excess of the amount received from sale of excess power as described in paragraph 6, it is understood and agreed that during the period such conditions exist, fertilizers are made at a corresponding profit and the lessee shall be entitled to twenty-five per cent of such profit.

19. **CONSIDERATION.**—In consideration of the performance of the foregoing proposals and conditions the Government shall agree to pay to the lessee the cost plus 5 per cent of for the completion of Dam No. 2, the initial alterations of nitrate plants No. 1 and No. 2, and the completion of the locks at Dam No. 2, the completion of steam plant No. 1 to a capacity of 10,000 K. W. and steam plant No. 2 to a capacity of 90,000 K. W. and, when required by the Government, to build for the building of Dam No. 3 and nitrate plant No. 3 and the locks at Dam No. 3 and additional dams and nitrate plants and storage reservoirs, the actual cost of the same, respectively, together with a fee of five per cent on such cost in each case, on the same terms, in monthly payments, as per estimates of the engineers upon schedules of work performed. The cost in each case is to be determined by the lowest responsible bid resulting from a public offer by lessee and by the contract awarded by lessee to such bidder subject to approval by the Secretary of War. It is understood and agreed, however, that if the Government shall decide to finish dam No. 2, that lessee will accept a lease subject to that modification of this proposal.

20. **PAYMENTS.**—It is agreed herein that the engineers representing the Government and lessee will shall on the first of each month furnish the lessee and the Secretary of War an estimate of the work performed and a statement of the amount earned by the lessee during the preceding month.

21. **STORES, STOCK, AND EQUIPMENT.**—All stores, supplies, equipment, including engineers' supplies, files and instruments, and other loose personal property now on or about the premises, whether or not required for construction purposes, but not

including subsistence stores, shall become the property of the lessee upon the execution of this contract.

~~22. COMPENSATION.—It is further agreed that as a part of the compensation for the performance of this contract the lessee will retain the proceeds from the sale of power not required to operate the plant or plants, and locks or lifts, ever and at the rate of 1 mill per kilowatt-hour required for financing the production of fertilizer compounds, or to be paid into the United States Treasury as set forth in this agreement.~~

22. COMPENSATION.—It is further agreed that as compensation for the performance of this contract the lessee shall retain:

- (a) The proceeds from the sale of 33 1-3% of excess power from Dam No. 2 not required to operate the plant or plants, and locks or lifts; the other 66 2-3% to be contributed for operating expenses as provided in paragraph 6; and, when Dam No. 3 is built, the proceeds from the sale of 25% of excess power from Dam No. 3 not required to operate nitrate plant No. 3 and locks or lifts at Dam No. 3, the other 75% to be contributed toward the operating expenses as provided in paragraph 6; the same percentage last above named, to apply to all other dams and nitrate plants that may be built hereunder.
- (b) The proceeds from the sale of twenty-five per cent of all by-products for which there shall be a market and not required in the manufacture of fertilizer compounds or mixtures; the other seventy-five per cent to be contributed toward operating expenses as provided in paragraph 6.
- (c) Twenty-five per cent of the profits on the manufacture of fertilizer compounds and when the same shall be made at a profit as provided for in paragraph 18; the other seventy-five per cent to be contributed toward operating expenses as provided in paragraph 6.

23. POWER FOR LOCKS.—The lessee agrees to furnish to the Government, free of charge, all power required to operate the locks or lifts which are to be operated by the Government.

24. EMERGENCY PROVISION.—The lessee agrees to place the property or any part thereof, at the disposal of the Government in the event of war or any other public emergency, or to operate the same for the Government to manufacture nitrates, explosives, or munitions of war or for other purposes necessary for the safety of the United States, as the Government may require.

25. BOND.—The lessee agrees to protect the Government for the full and faithful performances of the contract by giving a good and sufficient surety bond, to be approved by the Government.

26. INSPECTION.—It is agreed that the Government experts, inspectors, and accountants can, at all reasonable times, examine the books, papers, accounts, meters, and such other accessories of the plant necessary to satisfy them whether or not the lessee is executing this contract in good faith.

27. REPAIRS.—It is also agreed that should the foundation of Dam No. 2 be found defective or show excessive leakage, the Government will pay to the lessee the expense of the necessary repairs, including a reasonable allowance for overhead.

28. PROPOSAL DIVISIBLE.—The above proposals are submitted for acceptance in whole or in part as provided in section 19 hereof. Upon acceptance it shall be binding upon the Government, and the lessee, its successors and assigns; and all contracts, leases, and other instruments necessary or appropriate to effectuate the purpose of this proposal as accepted shall be duly executed and delivered by the respective parties above mentioned.

In witness whereof, the United States of America has caused these presents to be executed by the Secretary of War, pursuant to the authority conferred upon him by act of Congress, approved the — day of —, 1922, entitled "An act to provide for the lease and completion of Muscle Shoals and other purposes," and the said Frederick E. Engstrum has set his hand on the day and year first herein above set forth.

UNITED STATES OF AMERICA,
By _____, Secretary of War.
FREDERICK E. ENGSTRUM.

WASHINGTON, D. C., April 17, 1922.

Hon. JULIUS KAHN,

Chairman House Committee on Military Affairs.

MY DEAR MR. CHAIRMAN: I beg to submit herewith an amended form of proposed contract for completion and lease of Muscle Shoals project by Frederick E. Engstrum. The parts to be omitted are struck through and the parts inserted are in italic.

This amended proposal is submitted partly to clear up points that were brought out by questions of members of the committee during the hearing before the House

committee and partly as the result of a personal inspection made by Mr. Engstrum of the various properties pertaining to the Muscle Shoals project.

It is believed that the amended proposal will clear up many points about which there seemed to be doubt in the minds of members of the committee, and also, it is believed, that the changes made will all result in advantages to the Government.

The material amendments are as follows:

Paragraph 2: The Warrior steam plant is eliminated. The inspection of the property indicates that this plant is so intimately interwoven with the Alabama Power Co. plant that it really forms an integral part of that plant and probably can not be separated therefrom without seriously interfering with its efficient operation.

Paragraph 4: Capacity of nitrate plants No. 1 and No. 2 is increased by 5,000 kilowatts and 30,000 kilowatts, respectively. Such increase becomes necessary to replace power lost by eliminating the Warrior plant, the sales value of which is reported by the Ordnance Department to be \$3,000,000. Plants No. 1 and No. 2 can be modified as proposed, it is estimated, for less than \$1,500,000, thus saving the Government about \$1,500,000. This low estimate is due to the fact that steam plant No. 2 has boiler installation now for 90,000 kilowatts and electrical installation for only 60,000 kilowatts, but the foundations are prepared for the installation of 90,000 additional kilowatts electrical power.

Paragraph 4 also provides for construction of nitrate plants at other dams and reservoirs that may be constructed in the future; such new plants to have same capacity ratio to power produced at such dams as is the ratio of plants No. 1 and No. 2 to Dam No. 2.

Paragraph 6: This paragraph is rewritten and materially modified. As rewritten it enumerates clearly and definitely the sources of revenue that are to be applied by the lessee to the manufacture of nitrates, etc., at nitrate plants No. 1 and No. 2. It defines what is understood by the term "operating expenses" and lays down definitely the policy under which nitrate plants are to be operated, if and when additional dams and nitrate plants shall have been constructed. It is perhaps pertinent to call attention to the fact that under paragraph 6 when additional dams and nitrate plants are constructed the lessee's share of the receipts from the sale of excess power, generated at such dams, will be reduced from 33½ per cent to 25 per cent. This, it is believed, is practicable, due to the fact that lessee's overhead and general expenses for the operation of such additional plants will not increase in the same proportion, and, consequently this reduction in his receipts is made.

Paragraph 15: The addition to this paragraph is a specific statement that the lessee agrees to advance the necessary funds for operating expenses until the funds enumerated in paragraph 6 shall become adequate for that purpose.

Paragraph 16: The material addition to this paragraph provides that secondary power may be used to operate the nitrate plants when this can be done to insure the best financial terms so as to produce the maximum amount of nitrates.

Paragraph 18: This paragraph provides for the disposition of funds received from various sources enumerated in paragraph 6, when they are not wholly needed for the production of fertilizers, etc. It also defines when it is agreed that a profit is made on the manufacture of fertilizers at the price fixed by the Secretary of Agriculture, and that when such profit is made that the lessee shall be entitled to 25 per cent of said profit. This furnishes a motive for lessee to improve to the utmost the processes of manufacture and reduce to the minimum the operating expenses.

Paragraph 19: The material change in this paragraph provides that in case the Government should so elect it may itself finish dam No. 2 by its own engineers, and lessee will accept the lease subject to that modification.

Paragraph 22: This paragraph is entirely rewritten as a result of the modifications made in paragraph 6. This paragraph provides that the lessee shall retain 33½ per cent of the proceeds received from the sale of all power not required to operate the nitrate plant or plants and locks or lifts generated at dam No. 2 and steam plants No. 1 and No. 2, but that in case additional dams be constructed lessee will retain only 25 per cent of the proceeds of corresponding sales at such dams. This paragraph also provides that lessee shall retain 25 per cent of profits of the sale of all by-products, and finally in case a profit should be made on fertilizers, under the provisions laid down in paragraph 6, he shall be entitled to 25 per cent of such profits. It should be remarked that this paragraph is complementary to paragraph 6, and should be interpreted accordingly.

Paragraph 28: This is a new paragraph and is self-explanatory.

A careful reading of this amended proposal is requested, because one of the main objects in making the amendments, aside from clearness and definiteness, has been to make the interests of the lessee parallel with the interests of the Government, so that he shall have the proper motives for the utmost economy in operation and the

greatest efforts in improving the processes for fixation of nitrogen and for the reduction of fertilizer compounds. It has also been attempted, to clarify the policy contained in this proposal, to devote all available sources of revenue to the production of fertilizers at reduced prices in time of peace and to have the plants in condition to produce nitrates for explosives, with the least possible delay, in time of war or other emergencies; and this proposal makes this policy applicable to the whole project, however far it may be extended in future. In so far as lessee is informed, this proposal is the only one submitted which guarantees with definite provisions that such policy shall prevail.

Respectfully submitted.

FREDERICK E. ENGSTRUM

Government can not sell Gorgas-Warrior steam plant to a purchaser who can operate it except Alabama Power Co., and if Government does not sell to them it must take plant off their land (Mr. Miller and Mr. Martin)-----	677, 679
Government's hands are effectively tied by (Mr. McKenzie)-----	684
Legislation authorizing execution of (Mr. Martin)-----	722-723
Letter from Acting Chief of Ordnance bearing upon, text of (Colonel Joyes)-----	1094-1095
Letter from Colonel Joyes to the clearance committee requesting clearance for proposed contract for electric energy, etc., text of (Colonel Joyes)-----	1093-1094
Letter from General Goethals bearing upon, text of (Colonel Joyes)-----	1094-1095
Memorandum in re instructions for disbursements under agency contracts with particular reference to, text of-----	717-718
Memorandum to Procurement Division in re proposed construction and operating contract with Alabama Power Co., text of (Colonel Joyes)-----	1113-1115
Not executed until work on Gorgas-Warrior steam plant had been largely completed (Mr. Martin)-----	647
Orders and acceptances under which the work proceeded, text of (Colonel Joyes)-----	1045-1048
Outline of, in re Warrior power-----	720-721
Part of contract drawn up by Colonel Williams and part by Alabama Power Co. (Mr. Martin)-----	666
Profit made by company, contract provisions for (Colonel Hull)-----	180
Purpose of company in term of contract relative to three-year postponement of sale (Mr. Oliver)-----	771
Situation which led up to (Colonel Joyes)-----	1099-1049
Suggested basis for, for power for Air Nitrates Corporation plant at Sheffield-----	700-710, 729-730
Suggestions of the company which were not accepted by the Ordnance Department (Colonel Joyes)-----	1099-1101
Summary of article 22 of contract (Major Burns)-----	70
Supplemental, text of-----	651-657
Text of-----	150-171
Work on Gorgas-Warrior steam plant largely completed before execution of (Mr. Martin)-----	647
Would not interfere with Engstrum proposal (Mr. Butler)-----	918
Contract with, legal action involved in—	
Action by Government which would test construction (Colonel Hull)-----	208
Article 22 of contract is not a binding agreement on part of Government (Mr. Oliver)-----	769
Claims of Alabama Power Co. would not involve three or four years of litigation if Congress should by vote accept offer of Mr. Ford and direct condemnation of Gorgas plant (Mr. Oliver)-----	999
Dent Act has been fully met and complied with and is not applicable to contract (Mr. Oliver)-----	774
Discussion of legal phases of (Mr. Oliver)-----	764-774, 833-836
Government plant practically part of plant of Alabama Power Co. (Major Burns)-----	209-210
If Congress declares property of company is necessary for public use and condemns same, the company has right to contest that question in the courts (Mr. Dent)-----	817-822
If Congress should cause Gorgas-Warrior steam plant to be condemned and taken over, the necessity for thus taking it over could not arise in any court (Mr. Oliver)-----	765
General statement on legal rights of the company under its contract (Mr. Dent)-----	742-764, 816-833
Legislation bearing upon (Mr. Dent)-----	749-752
Mr. Engstrum's proposal does not involve any litigation in connection with—his offer is the use of the Gorgas plant under a lease that would come within the contract the Government has with them (Mr. Butler)-----	914-915

Alabama Power Co.—Continued.

Contract with, etc.—Continued.

Mr. Ford would not be willing to take over any legal work in reference to segregating the Government's rights under existing contract (Mr. Mayo).....	979, 987-9
National defense act—	
Contract not governed by (Mr. Dent).....	747-78
Ordnance Department did not make contract with Alabama Power Co. under authority of (Mr. Martin).....	723-724, 72

Letter to Chairman Kahn, dated March 13, 1922, text of.....	989-993
Statement.....	900-935, 989-998
By-product coke-oven interests:	
Actively engaged in defeating completion of nitrate plant No. 2 (Mr. Bower)	621-622
Claim that they are fully protecting interests of the farmer not true (Mr. Bower)	624
Obtained duty of \$12 a ton on ammonium sulphate in tariff bill, after having opposed completion of nitrate plant No. 2 (Mr. Bower) ..	621-622
Byrns, Hon. Joseph W., Representative in Congress from Tennessee, statement.....	1020
Calcium carbide could be produced at nitrate plant No. 2 (Mr. Parker) ..	481
Calcium cyanamid. (See Cyanamid.)	
Capital investment of Mr. Engstrum's corporation:	
Amount of, considered entirely immaterial, since the lessee is giving a bond (Mr. Butler)	910
Company not entirely without means, will have a sufficient capital for an operating company (Mr. Butler)	920
Comparison of, with that of Mr. Ford's company (Mr. Butler)	991
Mr. Butler thinks they can meet Mr. Miller's suggestion that the com- pany have a stated paid-up capital of from \$1,000,000 to \$5,000,000 (Mr. Butler)	922
More practicable for the personnel of the company to become per- sonally responsible in addition to the bond; would be better than putting up a lot of idle money (Mr. Butler)	923
Capital investment of Mr. Ford's company:	
Capital stock will not be less than \$10,000,000 (Mr. Mayo)	971, 978
Discussion of (Mr. Mayo)	883
Estimate of (Mr. Worthington)	881-882
Minimum figure to start with would be cost plus operating capital (Mr. Mayo)	242

	Page.
Capital investment of Mr. Ford's company—Continued.	
Mr. Ford will probably put \$5,000,000 in fertilizer plant, to start with (Mr. Mayo).....	308
Probably \$25,000,000 or \$30,000,000 will be invested within a few years (Mr. Mayo).....	259
Carbide. (See Calcium carbide.)	
Caro, Dr. N.: Production of nitrogen compounds at nitrate plant No. 2— Statement on—

Mr. Silver.....	564
Carrying charges on construction of dams: Table showing, estimated by Chief of Engineers.....	20
Catalyst:	
Definition of (Dr. Parsons).....	1132-1133
Fixed nitrogen research laboratory has developed the best in the world (Dr. Parsons).....	1134
Since the war the Government has made a catalyst which is the best in the world (Mr. Butler).....	990
Central Georgia Power Co.:	
Intercorporate relations with American Cyanamid Co., no connection between companies (Mr. Hammitt).....	486
Letter of May 20, 1921, from—inadvisable for Government to develop Muscle Shoals.....	118-121
Chief of Engineers. (See Engineers, Chief of.)	
Chief of Ordnance. (See Ordnance, Chief of.)	
Claude process:	
Much more efficient method of producing nitrogen compounds than the cyanamid process (Mr. MacDowell).....	522
Requires about one-tenth of the horsepower used by the cyanamid process (Mr. MacDowell).....	522
Coffin & Burr:	
Alabama Power Co.'s proposition will probably be financed by (Mr. Frothingham).....	963
Banker control over Alabama Power Co. explained (Mr. Frothingham).....	957
Have handled bonds on hydroelectric properties all over the United States and in Canada (Mr. Frothingham).....	959
Coke-oven interests. (See By-product coke-oven interests.)	
Columbus Power Co.:	
Intercorporate relations with American Cyanamid Co., no connection between companies (Mr. Hammitt).....	486
Letter of May 20, 1921, from, inadvisable for Government to develop Muscle Shoals.....	118-121
Contracts:	
Liability of the Government; opinion of Colonel Hull.....	199-200
(See also subheading "Contracts" under the following: Air Nitrates Corporation; Alabama Power Co.; American Cyanamid Co.; General Chemical Co.)	
Contracts of Mr. Ford, if unfulfilled; legal recourse of the Government:	
Opinion of Colonel Hull.....	190-191, 202-203
Opinion of Mr. Weeks.....	23-29
Text of Ford proposal.....	16
Conversion of atmospheric nitrogen, description of, extract from a paper by R. O. E. Davis, United States Bureau of Soils (Mr. Mayo).....	251
Cooper, Hugh L., consulting engineer:	
Analysis of statement that cost to Treasury under Ford proposal would be \$1,275,000,000.....	638-639
Statement.....	409-429, 638-639
Core recovery at dam sites, table showing.....	114
Cost of construction under Engstrom proposal; cost fixed by the lowest bidder, and 5 per cent fee on that low and fixed cost is asked (Mr. Butler).....	919
Cost statement of United States nitrate plants Nos. 1 and 2 and Warrior-Sheffield power station and transmission line (memorandum of Chief of Ordnance).....	21-22

	Pag.
Cost to Government of the delay in accepting Ford offer, table showing (Mr. Almon)	105
Costs:	
Dam No. 2—	
\$16,251,088.14 (total expenditures) (Secretary of War's report) ..	4
\$17,159,610.42 (total allotments) (Secretary of War's report) ..	4
Gorgas-Warrior steam plant. (See Costs: Warrior-Sheffield power station and transmission line.)	
Nitrate plant No. 1, \$12,887,941.31 (Chief of Ordnance)	1
Nitrate plant No. 2—	
Including Muscle Shoals substation, \$69,674,000 (approximately) (Chief of Ordnance)	1
Including Waco quarry, \$67,555,355.09 (Chief of Ordnance)	2
Power plant of, \$12,000,000 (approximately) (Major Burns)	21
Total, including maintenance to July 1, 1921, \$106,208,016.07 (Mr. Weeks)	3
Under contract with Air Nitrates Corporation, \$69,000,000 (approximately) (Colonel Hull)	18
Under contract with Alabama Power Co., \$4,676,000 (approximately) (Colonel Hull)	18
Waco quarry—	
\$1,179,000 (approximately) (Chief of Ordnance)	18
\$1,179,076.80 (Secretary of War)	5
\$1,302,962.88 (Chief of Ordnance)	22
Warrior-Sheffield power station and transmission line—	
\$4,676,000 (approximately) (Chief of Ordnance)	18
\$4,979,782.33 (Chief of Ordnance)	22
\$938,057.35 (Chief of Ordnance)	22
Costs of maintenance, Muscle Shoals proposition; in stand-by condition approximately \$200,000 a year spent by Engineer Department (Major General Beach)	104, 108
Credit of the Government under Ford proposal:	
Can be lent to Muscle Shoals proposition at 4 per cent (Mr. Mayo) ..	268
Will be loaned at not to exceed 4 per cent (Mr. Worthington)	373
Cyanamid:	
Amount of limestone necessary for making (Major General Williams) ..	78
Amount of sold in year, by American Cyanamid Co. (Mr. Hammitt) ..	518-519
Table showing manufacturing cost of calcium cyanamid (lime-nitrogen) at United States nitrate plant No. 2	552-553
Use of nitrate plant No. 2 to manufacture, would show heavy loss (Mr. Hammitt)	463
(See also Nitrogen compounds.)	
Cyanamid process:	
Description of—	
Doctor Parsons	1131-1132
Mr. Mayo	252
Report of Muscle Shoals Committee of American Farm Bureau Federation	547-548
For the fixation of atmospheric nitrogen is one of the oldest and best (Mr. Almon)	1002
Is being abandoned by all countries which have used it (Mr. Butler) ..	991
Is practically already superceded by the Haber process and its modifications (Doctor Parsons)	1121
Many cyanamid plants in foreign countries have been closed (Doctor Parsons)	1121
Much less efficient method for producing nitrogen compounds than the Haber and Claude processes (Mr. MacDowell)	522
Requires more horsepower than Haber or Claude process (Mr. MacDowell)	522
Used in nitrate plant No. 2 (Major Burns)	208-209
Will be obsolete in five years in so far as production of nitrogen for fertilizer purposes is concerned (Mr. MacDowell)	521, 522
Cyanide process:	
Description of (Mr. Mayo)	251

Dams:

Page.

Capacity in kilowatt hours of Nos. 2 and 3 (statement No. 2, Mr. Cooper)-----	411
Completion of, will increase amount of navigation (Mr. Quin)-----	293
Construction and operation of—	
Text of Alabama Power Co. proposal-----	776
Construction, lease, and operation of—	
Text of Engstrum proposal-----	897
Text of Ford proposal-----	13-14
Construction of, maximum time needed two years (Mr. Mayo)-----	269
Construction to be by Mr. Ford's company, from plans by Chief of Engineers—	
Present Ford proposal-----	13, 14
Construction to be by the United States—	
First Ford proposal-----	10
Cost of completing, as estimated by Mr. Ford's engineers, has not been guaranteed by Mr. Ford. (Secretary of War's report)-----	5
Cost of completing, as estimated by Mr. Ford's engineers, inadequate (Mr. Cooper)-----	417
Cost of completing, by the Government, would be warranted by amount of transportation (Mr. Quin)-----	396
Cost of completing Nos. 2 and 3 estimated at \$50,000,000; appropriation asked to cover contingencies (Major General Beach)-----	102
Cost of completing Nos. 2 and 3 estimated by Chief of Engineers to be \$50,000,000-----	20
Cost of completing Nos. 2 and 3 estimated by Mr. Almon to be \$40,000,000-----	1004
Cost of completing Nos. 2 and 3 estimated by Mr. Ford's engineers at \$42,230,000 (Mr. Mayo)-----	267
Cost of completing Nos. 2 and 3, not including locks, estimated by Mr. Ford to be \$30,000,000 (Mr. Worthington)-----	383
Cost of construction of, if completed by private party instead of by the Government, would show saving of approximately \$16,000,000 (Mr. Mayo)-----	300-301
Cost of Nos. 2 and 3 will be wiped out by sinking fund, if invested by Government at 4½ per cent (Mr. Mayo)-----	247
Cost (total) of Nos. 2 and 3, estimated by Mr. Cooper to be \$83,175,475-----	410
Fall of water at, figures of (Mr. Cooper)-----	426
Horsepower to be generated at Nos. 2 and 3 (Mr. Mayo)-----	261
If Mr. Ford pays 4 per cent interest on total cost of Nos. 2 and 3 (\$83,175,475), would save the United States Treasury \$1,275,000,000 during lease period (statement No. 4, Mr. Cooper)-----	418
Keokuk, horsepower at (Mr. Cooper)-----	426
Mr. Engstrum will build extra dams as fast as necessary, and use all this development in producing cheaper nitrates (Mr. Butler)---	904, 913
No. 1—	
Cost of construction, estimated at \$1,400,000 (Major General Beach)-----	114
Navigation project, not in this proposition (Mr. Weeks)-----	61
No. 2—	
Alabama Power Co. donated abutment sites valued at \$500,000 to Government in 1918, for (Mr. Martin)-----	669-671, 698-699
Alabama Power Co. would apply for license under Federal water power act to complete and operate, text of proposal-----	775
Construction to be by Alabama Power Co. under its proposal---	776
Construction to be by Mr. Ford's company from plans by Chief of Engineers, under Ford proposal-----	13
Cost of (report of Muscle Shoals Committee of American Farm Bureau Federation)-----	551-552
Cost of, \$16,251,038.14 (total expenditures) (Secretary of War's report)-----	4
Could not be salvaged at any value (Mr. Cooper)-----	416
Desirable that it be completed by the Government if Ford proposal be not accepted (Mr. Cooper)-----	425, 426.
Desirable that it be completed by the Government if Ford proposal be not accepted (Secretary of War's report and statement)-----	9, 60, 65

Dams—Continued.

No. 2—Continued.

	Page
Dimensions of, when completed (Secretary of War's report)-----	4
Discussion as to whether the \$17,000,000 the Government has put into, will be absorbed and used by the Alabama Power Co. (Mr. Miller and Mr. Frothingham)-----	953-64
Government could lease horsepower on basis of a return of 5 per cent on all money invested in (if Ford proposal be not accepted) (Mr. Cooper)-----	17
Horsepower developable (Major General Beach)-----	24
Letter from Woodrow Wilson dated February 23, 1918, text of... Letter of May 28, 1921, from Alabama Power Co., to General Beach giving suggestions in regard to, text of-----	64 790-22
Mr. Engstrum believes he can complete, by the Government pay- ing him 5 per cent, at less expense than the Army engineers could complete it without the 5 per cent (Mr. Engstrum)-----	98
Must either be completed or blown up and removed from the river (Mr. Butler)-----	97
National defense act gave authority for construction of (Secretary of War's report)-----	1
Offers of Mr. Ford to lease-----	10, 13-2
Operation and maintenance. (See Dams: Repairs, maintenance, and operation.)	
Overhead in construction of, under Engstrum proposal explained (Mr. Engstrum)-----	93
Purpose of construction to reduce cost of operating nitrate plants (Major General Beach)-----	9
Reported upon by Secretary of War-----	4, 5, 1
Status of construction, 30 per cent completed (Secretary of War's report and statement)-----	4, 3
Time necessary to complete, estimate of (Major General Beach)-----	106
Time necessary to complete, estimate of (Mr. Cooper)-----	415
Water will be raised 100 feet (Major General Beach)-----	109
Will render 14.7 miles of Muscle Shoals navigable (Secretary of War's report)-----	5
No. 3—	
Acquirement of lands and flowage rights for. (See Flowage rights.)	
Government would construct, under Ford proposal, on abutment sites and flowage lands owned by Alabama Power Co. (Mr. Martin)-----	689, 684-685
Mr. Engstrum's proposal does not require the building of, at present, but does provide for doing it later (Mr. Butler)-----	903
No justifiable reason to build, at this time (Mr. Butler)---	917, 918, 992
Not desirable to build if Ford proposal be not accepted (Mr. Weeks)-----	31
Offers of Mr. Ford to lease-----	11, 14
Reported upon by Secretary of War-----	4-5
Time necessary to construct, estimate of (Mr. Cooper)-----	418
Will render 68 additional miles navigable (Secretary of War's report)-----	5
Repairs, maintenance, and operation under Alabama Power Co. pro- posal—text of proposal-----	776
Repairs, maintenance, and operation under Ford proposal—	
Maintenance of (Mr. Miller and Mr. Mayo)-----	274
Might be more desirable to have Mr. Ford maintain Dams Nos. 2 and 3 and omit annual payments proposed (report of Secre- tary of War)-----	9
Operation and maintenance of Nos. 2 and 3, cost to Mr. Ford (statement No. 3, Mr. Cooper)-----	412-413
Payments specified considered adequate by Chief of Engineers---	19
Text of first and present proposals-----	10, 11, 14
Should the Ford proposal be accepted the Government would be re- quired to spend over \$60,000,000 to complete Dam No. 2 and build Dam No. 3 (Mr. Butler)-----	992
Statement showing cost per horsepower year to Mr. Ford for power to be generated at Nos. 2 and 3 (Mr. Mayo)-----	285-286

Dams—Continued.	Page.
Table showing core recovery at dam sites.....	114
Would extend navigation about 90 miles (Mr. Mayo).....	295
Dent, Hon. S. Hubert, jr., attorney for Alabama Power Co., statement.....	640, 742-764, 816-833
Dent Act:	
The purpose of this law has been fully met and complied with and is not applicable to contract with Alabama Power Co. (Mr. Oliver).....	774
Text of.....	657-660
Depreciation. (See Estimates: Nitrate plant No. 2, depreciation on.)	
Diagrams:	
Consumption and supply of inorganic nitrogen (Major General Williams).....	75
Disposition of Muscle Shoals proposition:	
Alabama Power Co. proposal indorsed by Mr. Frothingham, of Coffin & Burr.....	950-954, 968
Dam No. 2—	
Desirable that it be completed by the Government if Ford proposal be not accepted (Mr. Cooper).....	425, 426
Desirable that it be completed by the Government if Ford proposal be not accepted (Secretary of War's report and statement).....	9, 60, 65
Must either be completed or blown up and removed from the river (Mr. Butler).....	917
Opinion of Major General Beach.....	103
Recommendation in report of Muscle Shoals Committee of American Farm Bureau Federation, dated May 31, 1921.....	565
Not desirable to build if Ford proposal be not accepted (Mr. Weeks).....	31
Desirable that an administrative officer of the Government be authorized to dispose of property on best terms obtainable (Mr. Hammitt).....	454, 455
Ford offer better proposition than that of Alabama Power Co., financially, for the Government, for the interests of agriculturists; and for maintenance of plant for manufacture of explosives (Mr. Bower).....	632
Ford offer indorsed (Mr. Almon).....	1003
Ford offer indorsed by Alabama delegation in Congress as a unit (Mr. Almon).....	1012
Ford offer indorsed by Governor of Tennessee.....	319-322
Ford offer indorsed by Mr. Worthington of the Tennessee River Improvement Association.....	355, 384-385
Ford offer indorsed by petition of officials of Jefferson County, Ala. (Mr. Almon).....	1017-1018
Ford offer indorsed by resolutions adopted by Florence Chamber of Commerce, Florence Rotary Club, and Florence Exchange Club (Mr. Almon).....	1015-1017
Ford offer indorsed by resolutions of Birmingham mass meeting (Mr. Almon).....	1017
Ford offer indorsed by resolutions of the American Farm Bureau Federation.....	542-543
Ford offer indorsed by Senators from Alabama (Mr. Bankhead).....	1018
Ford offer would be most favorable trade the Government has ever made with an individual (Mr. Fields).....	608
Gorgas-Warrior steam plant should be sold to Alabama Power Co. (Major Burns).....	211
Inadvisable for Government to develop (letter from southeastern power companies).....	118-121
Nitrate plant No. 1—	
No one can favor scrapping of, who is concerned with providing this country with an adequate supply of nitrogen and cheaper fertilizer (Mr. Butler).....	990
Ordnance Department has recommended that it be disposed of (Major Burns).....	208
Recommendation in report of Muscle Shoals Committee of American Farm Bureau Federation, dated May 31, 1921.....	565-567

Disposition of Muscle Shoals proposition—Continued.

Nitrate plant No. 1—Continued.	Pa.
Should not be scrapped; could be redesigned and made the most efficient Haber process plant in the world (Mr. Butler)-----	103
Nitrate plant No. 2—	
Opinion of Major General Williams-----	73
Opinion of Mr. Hammitt-----	56
Recommendation in report of Muscle Shoals Committee of American Farm Bureau Federation, dated May 31, 1921-----	565-67
Recommended that it be maintained for production of nitrates for war purposes (Mr. MacDowell)-----	529, 538-39
Statement of Department of Agriculture-----	36
Opinion of Mr. Duke, president of Southern Power Co.-----	115-116, 17
Opinion of Mr. Hammitt-----	46
Opinion of Mr. Miller-----	10
Opinion of Mr. Weeks-----	52, 3
Recommendation that the Government finish (Mr. Cooper)-----	43.
	417, 418, 425, 46
Recommendations in report of Muscle Shoals Committee of American Farm Bureau Federation, dated May 31, 1921-----	565-567
War Department opposed to scrapping (Major General Williams)---	8
War Department proposed that a Government-owned corporation take over and operate the power of Dam No. 2 and all the nitrate properties (Colonel Joyes)-----	104
Would be most improvident to lease Muscle Shoals with only enough power reserved to operate nitrate plant No. 2 with the remainder of this enormous water power surrendered to a private monopoly for 100 years (Mr. Butler)-----	99)
Drifton Railroad:	
Contract with Alabama Power Co.—	
Opinion of November 16, 1921, of Acting Judge Advocate General-----	132-134
Text of-----	150-171
Cost the Government \$50,421.94 (memorandum of Chief of Ordnance) -	22
Description schedule in contract-----	170
Government paid \$30,000 and Alabama Power Co. paid \$105,000 for cost of construction (Mr. Martin)-----	693
Duke, James B., president of Southern Power Co.:	
Controls Virginia-Carolina Chemical Co. (Mr. Bower)-----	623, 637
Letter of June 24, 1921, from—Inadvisable for Government to develop Muscle Shoals-----	115-117
No connection with proposed corporation under the Engstrom proposal (Mr. Butler)-----	930
Statement regarding alleged connection of, with Virginia-Carolina Chemical Co. (Mr. Hammitt)-----	496
Stockholdings in American Cyanamid Co. (Mr. Hammitt)-----	467, 496
Stockholdings in American Cyanamid Co. are 24 per cent of stock (Mr. Bower)-----	623
Electric current:	
Table showing rates for, sold by Alabama Power Co. at Huntsville, Ala., in effect January 1, 1922 (Mr. Worthington)-----	363
Electric light and power security issues in 1921, table showing-----	356
Electrical transmission of power:	
Alabama Power Co. sending 250 miles (Major General Beach)-----	101
Electrification of railroads:	
Advantages of (extract from report of Chief Engineer W. S. Murray on the superpower survey) (Mr. Silver)-----	585-586
Discussion of (Mr. Worthington)-----	355
In Alabama and other Southern States should require 240,000 horsepower (Mr. Martin)-----	799
Electrolytic cell:	
Since the war the Government has made the largest and most efficient in the world (Mr. Butler)-----	990
Engineers, Chief of:	
Analysis of the Ford proposal-----	19-21
Letter inviting proposals relative to Muscle Shoals, text of-----	99
(See also Beach, Maj. Gen. Lansing H.)	

Engstrum, Frederick E., president of the Newport Shipbuilding Corporation :	
Amendments to offer, Appendix B-----	1146
Has had two contracts with the Quartermaster's Department for the building of concrete ships (Mr. Engstrum)-----	937, 938
Proposal of. (See Proposal of Mr. Engstrum.)-----	
Statement-----	895-900, 935-939
Estimates :	
Amount obtainable from the 100,000 horsepower salable by the Government can be figured as \$1,357,854,750 (Doctor Parsons)-----	1144
Appropriation necessary if Mr. Ford's proposal is accepted, \$40,000,000 to \$50,000,000 (Secretary of War's report)-----	8
Carrying charges on construction of dams, \$13,320,000 (memorandum of Chief of Engineers)-----	20
Construction plant at Dam No. 2—	
\$2,990,433 (present value, as estimated by Army officers, quoted by Mr. Wurzbach)-----	885
\$4,740,807 (book value as given by Army officers, quoted by Mr. Wurzbach)-----	885
Cost of making river navigable over Muscle Shoals, if dams are not constructed, \$8,000,000 (approximately) (Major General Beach)---	122
Dam No. 1, \$1,400,000 (Major General Beach)-----	114
Dam No. 2—	
\$23,000,000 (Mr. Almon)-----	1004
\$23,230,000 (Mr. Ford's engineers)-----	20
\$25,000,000 (Chief of Engineers)-----	20
Dam No. 3—	
\$17,000,000 (Mr. Almon)-----	1004
\$19,000,000 (Mr. Ford's engineers)-----	20
\$25,000,000 (Chief of Engineers)-----	20
Dams Nos. 2 and 3—	
\$30,000,000 (not including locks) (Mr. Ford's estimate given by Mr. Worthington)-----	383
\$42,230,000 (Mr. Mayo)-----	267
\$45,000,000 (total new money that must be spent by the Government to carry out Ford offer) (Mr. Mayo)-----	249
\$50,000,000 (Chief of Engineers)-----	20
\$60,000,000 (should the Ford proposal be accepted) (Mr. Butler)---	992
\$83,175,475 (total cost) (Mr. Cooper)-----	411, 414
Deficit to the Government in interest payments during construction and for first six years under Ford proposal, \$7,359,800 (Mr. Mayo)---	248
Expenditures of the Government under Engstrum proposal, \$30,000,000, estimated (Mr. Butler)-----	992
Expenditures of the Government under Ford proposal—	
Compared with payments to the Government (Mr. Miller and Mr. Mayo)-----	262-265
Discussion of (Mr. Miller and Mr. Mayo)-----	267-273
Interest compounded on \$83,175,475 would be a loss to Treasury of \$1,275,000,000 at end of lease period (Mr. Cooper) (analysis of this statement by Mr. Mayo, p. 976-977)-----	410, 414, 638-639
Interest compounded on investments of Government as figured by Mr. Cooper can not be done (Mr. Bower)-----	626
Statement given by Mr. Morin (analysis of this statement by Mr. Mayo, p. 249)-----	249
Will not exceed \$45,000,000 (Mr. Mayo)-----	249
Flowage rights at Dam No. 2, \$350,000 in 1916; \$383,490 actual cost of 6,612.4 acres; \$40,000 estimate of cost of remaining 600 acres; \$423,490 total amount of item (from record of Chief of Engineers, U. S. Engineer Office, Florence, Ala., statement of July 31, 1921) (Mr. Mayo)-----	256
Flowage rights at Dam No. 3—	
\$1,000,000 (minimum) (Mr. Ford's engineers)-----	243
\$1,500,000 (maximum) (Mr. Ford's engineers)-----	243
\$1,500,000 (Mr. Weeks)-----	43
\$2,331,000 (Chief of Engineers)-----	20
\$2,700,000 (rough estimate) (Mr. Cooper)-----	422

Estimates—Continued.

	Page.
If Ford proposal be not accepted and the Government completes Dam No. 2, the present investment of the Government might be \$22,000,000 instead of \$40,000,000 to \$50,000,000 (report of Secretary of War)-----	9
If Gorgas-Warrior steam plant is left in Mr. Ford's proposition, the Government must condemn contractual rights, plant, and land of Alabama Power Co., involving about \$4,000,000 (Mr. Dent)-----	78
If Gorgas-Warrior steam plant is left in Mr. Ford's proposition, the Government will be giving him equivalent of approximately \$9,000,000 (Mr. Dent)-----	78
Locks of Dam No. 2, \$2,500,000 (Mr. Weeks)-----	16
Navigation, prewar estimate by United States engineers of amount chargeable to, \$8,575,000 (Mr. Almon)-----	104
Nitrate plant No. 1, redesigning of, \$4,000,000 (maximum) (Mr. Butler)-----	93
Nitrate plant No. 2, depreciation on—	
\$2,500,000 (Army engineers' estimate, quoted by Mr. Bower)-----	63
\$2,500,000 annually (Mr. Mayo)-----	24
\$6,000,000 for six years (Major General Williams)-----	8
Nitrate plant No. 2, redesigning of, \$3,000,000 (maximum) (Mr. Butler)-----	90-
Right of way for transmission line, no estimate made of probable cost (Major General Williams)-----	81
Salvage value of Dam No. 2, could not be salvaged at any value (Mr. Cooper)-----	416
Salvage value of Gorgas-Warrior steam plant. (See Estimates: Salvage value of Warrior-Sheffield power station and transmission line.)	
Salvage value of nitrate plant No. 1, \$800,000 (Chief of Ordnance)---	18
Salvage value of nitrate plant No. 2—	
\$6,700,000 (rough estimate) (Mr. Hammitt)-----	506
\$7,250,000 (as scrap) (Chief of Ordnance)-----	18
\$11,640,000 (as operating concern and scrap) (Chief of Ordnance)-----	18
Salvage value of Waco quarry—	
\$102,000 (as scrap) (Chief of Ordnance)-----	18
\$357,000 (as operating concern) (Chief of Ordnance)-----	18
Salvage value of Warrior-Sheffield power station and transmission line—	
\$360,000 (as scrap) (Chief of Ordnance)-----	18
\$3,675,000 (as operating concern) (Chief of Ordnance)-----	18
Salvage value, total, of plants—	
\$8,812,000 (as scrap) (Chief of Ordnance)-----	18
\$10,082,000 (as operating concern) (Chief of Ordnance)-----	18
\$18,272,000 (as operating concern and scrap) (Chief of Ordnance)-----	18
Less than \$5,000,000 (excluding nitrate plant No. 2) (Colonel Hull)-----	190
Savings to the Government under Alabama Power Co. proposal—	
Discussion of (Mr. Martin)-----	845-850
Government would be relieved of obligation of putting up from \$50,000,000 to \$80,000,000 more in the project (Mr. Martin)-----	873
Would be at least \$2,000,000 a year in form of an outlay in interest; it saves its annual losses by way of maintaining and up-keeping the dam and gates (Mr. Martin)-----	856
Savings to the Government under Engstrom proposal, statement of (Mr. Butler)-----	892
Savings to the Government under Ford proposal—	
\$9,090,200 shown in Government balance sheet, during first six years (Mr. Mayo)-----	801
\$475,840,000 (Mr. Fields)-----	607-608
\$2,908,183,760 can be figured as, at end of 100 years (Mr. Mayo)---	977
Table showing annual cash saving amounting to \$747,121.44 (Mr. Almon)-----	1005

Estimates—Continued.	Page.
Table showing estimate of results of operation by Government of United States nitrate plant No. 2 for period of six years (Major General Williams)-----	84-85
Estimates of maintenance:	
Nitrate plant No. 2—	
Could be maintained by amount payable for power leased (Major General Williams)-----	89
\$4,000,000 for 20-year period (Major General Williams)-----	85
Expenditures of the Government:	
Analysis of (Major Burns and Mr. Miller)-----	218-219
For river development (Mr. Hull and Mr. Cooper)-----	425
Total, \$106,203,016.07 (Mr. Weeks)-----	36, 42
Under contract with Air Nitrates Corporation, statement of Colonel Hull-----	180
Under contract with Alabama Power Co., statement of Colonel Hull--	180
Explosives:	
Explanation of how ammonia is turned into (Doctor Parsons)-----	1135
Time necessary to convert fertilizer plant (nitrate plant No. 2) into plant for producing, under Ford proposal (Major General Williams)-----	98
Fair value:	
Discussion of definition of term (Mr. Martin and Mr. Wright)-----	697
Discussion of possible method of determining (Colonel Joyes)---	1074-1075
Farm implements:	
Possibility of manufacture of, as outcome of completion of Muscle Shoals project under Mr. Ford's proposal (Mr. Quin)-----	294
Farm mortgages:	
Estimates of (Mr. Quin)-----	396
Farmers:	
Alabama Power Co. proposal makes no provision for (Mr. Bower)---	616
If Government charges Mr. Ford 8 per cent interest on water power it will be paid in cost of fertilizer by (Mr. Bower)-----	631-632
Representatives of, to control price and distribution of fertilizer products, text of Ford proposals-----	12, 16
Use of concentrated fertilizer by, will come about as fast as demand is created and supply is made available (Mr. Swann)-----	437-438
Farmers Educational and Cooperative Union of America:	
Authorized to designate candidates for a board to control price and distribution of fertilizer products, text of Ford proposals-----	12, 16
Indorsed Ford proposal by resolution (Mr. Bower)-----	630
Membership of (Mr. Silver)-----	577
Resolution adopted February 8, 1916, regarding fixation of nitrogen as a fertilizer (Mr. Bower)-----	615-616
Farmers' organizations. (See Alabama Farm Bureau Federation, American Farm Bureau Federation, Farmers Educational and Cooperative Union of America, National Grange.)	
Federal Phosphorus Co.:	
Has been assisted and encouraged by Alabama Power Co., but is entirely independent (Mr. Swann)-----	436
Process of making concentrated fertilizer (Mr. Swann)-----	431-434
Statement of Mr. Swann, president-----	431-442
Federal Power Commission:	
If Mr. Ford is to have a straight lease he would be exempted from action of Federal water power law or laws of Alabama (Mr. Cooper)-----	416
Jurisdiction of, excluded under Ford proposal as written (statement No. 3, Mr. Cooper)-----	413
Might regulate sale of power by Mr. Ford (Secretary of War's report and statement)-----	9, 54, 56
Proposal of Alabama Power Co. complies with the policy of the Government as laid down by (Mr. Frothingham)-----	952
Under Alabama Power Co. proposal, would issue license to company for completion of Dam No. 2 (text of proposal)-----	776
Federal water power act:	
Alabama Power Co. would apply for license under, to complete and operate Dam No. 2, text of proposal-----	775

Federal water power act—Continued.

	Page
Provision of, bearing upon Alabama Power Co. proposal (Mr. Martin).....	854-55
Text of section 5, pertaining to applications for licenses (Mr. Worthington).....	380-81
Fertilizer:	
Agriculture, Department of, statement regarding farmers and Ford proposal.....	56
Alabama Power Co., does not guarantee to manufacture (Mr. Bower).....	9
Amount of, Mr. Ford will produce—	
Mr. Mayo.....	50
Mr. Silver.....	590, 02
Mr. Worthington.....	366-367, 378-379, 385-386, 92
Amount of power needed to produce 2,000,000 tons of commercial fertilizer at Muscle Shoals (Doctor Parsons).....	112
Annual production, statistics of (Doctor Whitney).....	39
Balance sheets of two largest companies show a loss of above \$20,000,000 last year (Mr. Swann).....	49
Board to control price and distribution of products—	
Text of Ford proposals.....	12, 6
(See also Legal questions involved: Fertilizer products, board to control.)	
Can be furnished to farmer at one-half of present cost by establishment of nitrogen industry with proper Government cooperation (statement of Mr. Washburn, president of American Cyanamid Co., on February 9, 1916) (Mr. Bower).....	62
Can be produced at Muscle Shoals more cheaply than in any other place in the United States (Mr. Worthington and Mr. Quin).....	398
Can not be manufactured at a profit at nitrate plant No. 2 (Mr. Hammitt).....	462-463
Companies producing, largest (Mr. Weeks).....	29
Concentrated—	
Description of development of process of making (Mr. Swann).....	431-434
Market will be found for, as fast as developed (Mr. Swann).....	437
Statement of Mr. Swann regarding, does not accord with development of the art as scientists and farmers understand it today (Mr. MacDowell).....	526
Use of, by farmers will come about as fast as demand is created and supply is made available (Mr. Swann).....	437-438
Concentration of, beyond a certain limit will injure seed (Mr. MacDowell).....	516, 520, 521
Consumption of—	
Discussion of (Mr. MacDowell and Mr. Fields).....	529-531
Increased on average of 7½ per cent yearly up to 1914 (Mr. MacDowell).....	529
Cyanamid for ingredient of, amount of, sold in year by American Cyanamid Co. (Mr. Hammitt).....	518-519
Difference between cost of production and selling price (Mr. Silver).....	572-573
Discussion of (Mr. Silver).....	605
Discussion of, and of nitrogen compounds (Doctor Whitney).....	322-349
Effect on cost of—	
By operation of nitrate plant No. 2 (Major General Williams)....	82-83
By proposed operations of Mr. Ford—	
Major Burns.....	216
Mr. Bower.....	623
Mr. Cooper.....	427
Ford proposal may benefit farmers (Major Burns).....	237
Ford proposal to produce, indorsed by American Farm Bureau Federation.....	41-42
Formula of 8, 3, and 3—	
Doctor Whitney.....	348
Major General Williams.....	94-95
Furnaces at nitrate plant No. 2 could be changed to produce (Mr. Swann).....	435
High grade, production of, at nitrate plant will reduce freight rates (Mr. Bower).....	627

Fertilizer—Continued.

	Page.
High price of nitrogen has established lower grade of (Mr. Bower)---	627
If Government charges Mr. Ford 8 per cent interest on water power, farmers will pay it in cost of (Mr. Bower)-----	631-632
If Mr. Ford were in the fertilizer business, farmers would get much cheaper fertilizer (Mr. Silver)-----	572-573
If potassium phosphate is produced at Muscle Shoals it could be used to fix by-product coke-oven ammonia gas and produce a complete fertilizer of very high concentration (Mr. Swann)-----	433
Is not sound public policy for Mr. Ford to manufacture, at nitrate plant (Mr. MacDowell)-----	537
Language of section 14 of Ford proposal, discussion of—	
Mr. Hill and Mr. Mayo-----	981
Mr. James and Mr. Mayo-----	977-978
Language of section 14 of Ford proposal modified (Mr. Mayo)-----	971
Language of section 15, discussion of—	
Mr. Crowther and Mr. Mayo-----	307-308
Mr. Silver-----	574-576, 588-591, 613-614
Mr. Worthington-----	378-379
Language of sections 14 and 15 of Ford proposal, suggested changes in, agreed to by Mr. Mayo (Mr. Silver)-----	988-989
Largest tonnage ever produced was 8,000,000, in 1918, and prices were highest in that year (Mr. Bower)-----	627
Less ammonia for, used in United States last year than in Germany, England, France, and Italy (Mr. Butler)-----	990
Letter of Aug. 14, 1922, from the Bureau of Soils, text of-----	336-343
Method of producing phosphoric acid and use as ingredient of (Mr. Swann)-----	432-433
Methods of production (report of Muscle Shoals committee of American Farin Bureau Federation)-----	548-549
Mr. Ford can not make, cheaper than is being made at present (Mr. MacDowell)-----	537
Mr. Ford could not discontinue manufacture of, until every effort is exhausted (Mr. Mayo)-----	302, 309
Mr. Ford could not state that he would use all products of nitrate plant No. 2 for fertilizer alone (Mr. Worthington)-----	366-367
Mr. Ford hopes to start producing within a year (Mr. Mayo)-----	257
Mr. Ford intends to produce completed product at 8 per cent above cost, at nitrate plant No. 2 (Mr. Mayo)-----	253
Mr. Ford or anyone else can not operate nitrate plant No. 2 to make fertilizer (Doctor Parsons)-----	1138
Mr. Ford understands his offer to guarantee that he will utilize at least 100,000 horsepower in the manufacture of (Mr. Mayo)-----	981
Mr. Ford will be able to produce at one-half the cost of production by other firms (Mr. Mayo)-----	284
Mr. Ford will be able to produce at 33½ per cent cheaper than it is being produced at present (Mr. Mayo)-----	308
Mr. Ford would be turning out, in less than 15 months if Congress voted to accept his offer and directed condemnation of Gorgas plant (Mr. Oliver)-----	999
National Fertilizer Association opposed to Ford contract, reasons stated (Mr. MacDowell)-----	523-527
Necessary ingredients can be obtained from raw materials in vicinity of Muscle Shoals (Mr. MacDowell)-----	535, 536
Nitrate plant No. 2 can produce about one-fourth of all nitrogen used in (Mr. Weeks)-----	45
Nitrate plant No. 2 could make one-half of the nitrogen content of fertilizer used in the United States annually (Major Burns)-----	230
Nitrate plants Nos. 1 and 2 will produce about one-third of fertilizer needed (Mr. Butler)-----	917
No need for nitrogenous product at present (Mr. MacDowell)-----	521, 538
Number of different brands of, and analysis of plant-food content (Mr. Bower)-----	628-629
Number of finished tons which could be produced at nitrate plant No. 2 (Mr. Mayo)-----	302, 308-309

Fertilizer—Continued.

	Page.
Obligation of Mr. Ford to produce—	
Colonel Hull	179, 181
Doctor Parsons	1140-1 42
Mr. Mayo	302, 309
Mr. Silver	590, 602
Mr. Weeks	28-29, 37
Mr. Worthington	385-396
The one possibility of making fertilizer with any degree of cheapness is through the development of nitrate plant No. 1. The Government can never hope to do anything with plant No. 2, and anybody that runs it will lose money very rapidly (Doctor Parsons)	1115
Operation of nitrate plant No. 2 would produce one ingredient of (Major General Williams)	4
Percentage of nitrogen, phosphoric acid, and potash necessary to produce a balanced ration (Mr. Bower)	6-7
Phosphate ingredient can be obtained within a radius of 100 miles of plants (Mr. Mayo)	29
Phosphate rock can be smelted in an electric furnace and phosphoric acid collected for use in industry, which will reduce present costs (Mr. Swann)	43
Possibility of making potash ingredient near plants (Mr. Mayo)	28
Possible results of production of, by Mr. Ford, to American farmer (Mr. Weeks)	4
Power to be furnished by Alabama Power Co. for production of, text of proposal	776
Present capacity of plant No 2 would produce about 2,000,000 tons of fertilizer, and with cheap water power the Ford Co. can make fertilizer at about one-half the present price (Mr. Almon)	1006
Price of, can not be reduced 33½ per cent by operation of nitrate plant No. 2 (Doctor Parsons)	1127
Price of, limits consumption in this country (Mr. Bower)	617, 618
Probabilities of production by Mr. Ford (Mr. Weeks)	28-29
Production of, at nitrate plant No. 2, not needed at present (Mr. MacDowell)	538
Production of, by Mr. Ford, would probably depress the market (Mr. Hammitt)	506
Production of, may not be profitable (Mr. Weeks)	29, 35-36
Production of, text of Engstrum proposal	807
Production of, text of Ford proposal	15-16
Production of, under Alabama Power Co. proposal; lease of nitrate plant by an independent concern, with 100,000 horsepower of free power supplied, would produce more and better fertilizer than any other way (Mr. Frothingham)	968
Products which can be manufactured at nitrate plant No. 2 and commercial outlook (Doctor Tolman)	313-319
Profit of manufacturer limited but not profit of middleman, under Ford proposal (Colonel Hull)	183
Proportion to be produced by Mr. Ford of total used in United States (Mr. Weeks)	44-45
Reason for opposition of industry to Ford proposal (Mr. Bower)	619-621
Resolution of the Farmers' Educational and Cooperative Union of America and of the National Grange adopted February 8, 1916, regarding fixation of nitrogen (Mr. Bower)	615-616
Results of producing, at this great plant simply staggering; it is a tremendous governmental function, reaching to every person in the Nation (Mr. Butler)	929
Saving to farmers by production of, by Mr. Ford, can be estimated at \$5,000,000,000 at end of 100-year period (Mr. Almon)	1006
Secretary of Agriculture would regulate the amounts to be offered for sale, under Engstrum proposal (Mr. Butler)	906
State of the art of making is very new (Mr. Cooper)	424
Statement of Dr. L. H. Baekeland before Senate Committee on Agriculture and Forestry regarding cost of manufacture of (Mr. Bower)	619

Fertilizer—Continued.

	Page
Statement showing number of tons of commercial fertilizer Mr. Ford could make at plant No. 2 (Mr. Worthington).....	367
Statements of Frank S. Washburn, president of American Cyanamid Co., before Committee on Agriculture on February 9 and March 16, 1916, regarding (Mr. Bower).....	618-619, 623-624
Statements of Frank S. Washburn, president of American Cyanamid Co., prior to the war, based on conditions radically different from present conditions (Mr. Hammitt).....	449
Statements relative to reduction of cost of production of, by nitrogen fixation methods (Mr. Bower).....	619
Table showing average increase per acre of all fertilizer experiments in the United States published up to 1910, with the number of experiments reported up to that time.....	345
Table showing consumption of, in United States, fiscal years ending 1913 to 1920 (from American Fertilizer Handbook for 1921) (Mr. Mayo).....	292
Table showing estimate of results of operation by Government of United States nitrate plant No. 2 for period of 6 years (Major General Williams).....	84-85
Table showing fertilizer production (Major General Beach).....	106
Table showing fertilizer tonnage by States.....	96, 107, 343
Table showing fertilizer tonnage in 1913 and 1919.....	341
Table showing total acreage in crops in 1919, the tonnage of fertilizer sold in each State, and the additional amount of ammonia required to bring the intensity of use at least up to the present practice in Georgia.....	340-341
Term "unit," in connection with, explained (Mr. Bower).....	635
To be produced at a capacity equal to 110,000 tons of ammonium nitrate per annum, under specified conditions (text of Ford proposal).....	15
To be produced at nitrate plant No. 2, not to be sold at a profit in excess of 8 per cent (text of Ford proposals).....	12, 16
United States used last year only 175,000 tons of nitrates for, to Germany's 500,000 tons, and at least half of what United States used was imported from Chile (Mr. Butler).....	901
Use of nitrate plant No. 2 to make various ingredients of (Mr. Hammitt).....	463-464
Use of secondary power for production of nitrates under proposal of Alabama Power Co. (Mr. Martin).....	801
(See also Ammonium sulphate.)	
(See also Nitrogen compounds.)	
Financing by the Government: When Ford offer is accepted Congress, instead of appropriating money to complete the dams, could provide for issuance of 4 per cent bonds. The interest paid by the Ford Co. would pay the interest on the bonds (Mr. Almon).....	1007
Fixed Nitrogen Research Laboratory, statement of Doctor Tolman, director of.....	313-319
Flowage rights:	
Alabama Power Co. owns some flowage lands at site of proposed Dam No. 3 (Mr. Martin).....	684-685
Cost of, estimated at \$1,000,000 (minimum) (Mr. Ford's engineers).....	243
Cost of, estimated at \$1,500,000 (maximum) (Mr. Ford's engineers).....	248
Cost of, estimated at \$1,500,000 (Mr. Weeks).....	43
Cost of, estimated at \$2,331,000 (memorandum of Chief of Engineers).....	20
Cost of, estimated at \$2,700,000 (rough estimate) (Mr. Cooper).....	422
Cost of land, and, should be included in cost of enterprise (Mr. Weeks).....	80
Cost of, Mr. Ford should pay interest on (Mr. Cooper).....	422
Cost of, should be charged to navigation (Mr. Mayo).....	243, 247, 250
Discussion of (Mr. Weeks).....	57
Government and Ford estimates for (Mr. Mayo).....	243, 246, 247
Interpretation of Ford proposal regarding—	
Colonel Hull.....	178
Major General Beach.....	113
Secretary of War's report.....	6
To be acquired by the United States, text of Ford proposal.....	14

Ford, Henry, proposals of. (See Proposals of Mr. Ford.)	
Frothingham, Francis E., of Coffin & Burr, Boston, Mass.:	Pass.
Indorses Alabama Power Co. proposal	950-954, 98
Statement	947-99
General Chemical Co.:	
Contract with, legal questions involved in—	
Letter of December 14, 1921, of Acting Judge Advocate General	174-17
Opinion from Judge Advocate General's Office	24
Extracts from the minutes of a regular meeting of the executive committee of the General Chemical Co., held on the 1st day of June, 1917	204-20
Letter dated June 5, 1917, placing certain patents and processes for the production of nitrates at the disposal of the President, text of	203-201
Patents of, letter of December 14, 1921, of Acting Judge Advocate General, text of	174-17
Royalty for process (Mr. Weeks)	4
Georgia Railway & Power Co.:	
Interpolate relations with American Cyanamid Co., no connection between companies (Mr. Hammltt)	484
Letter of May 20, 1921, from; inadvisable for Government to develop Muscle Shoals	118-121
Germany developing water power:	
Magazine article describing Neckar River project	354
Goethals, Gen. G. W.:	
Mr. Engstrom has secured the services of, as engineer in charge of construction (Mr. Butler)	935
Text of bulletin issued by, bearing upon contract with Alabama Power Co.	648, 649
Gorgas-Warrior steam plant:	
Alabama Power Co. received \$285,000 for constructing Gorgas-Warrior steam plant (Mr. Martin)	663
Alabama Power Co.'s investment and expenses amounted to \$1,016,515.61 in connection with the plant (Mr. Martin)	650
Analysis of several alternative provisions for disposal (Colonel Joyes)	1049-1050, 1058-1060
Can not of necessity be essential to the development of Muscle Shoals (Mr. Dent)	752-700
Cheaper to use for making power than steam plant at nitrate plant No. 2 (Mr. Mayo)	257, 292
Cheaper to use for making power than the two stand-by steam plants, therefore it is very necessary at present (Mr. Butler)	914
Considered necessary by Mr. Ford to supplement primary power. It is the first and cheapest steam power Mr. Ford would use (Mr. Mayo)	975
Contract with Alabama Power Co.—	
Government can not sell to a purchaser who can operate it, except Alabama Power Co., and if Government does not sell to them it must take it off their land (Mr. Martin and Mr. Miller)	677, 679
Legislation bearing upon (Mr. Dent)	749-752
Opinion of Nov. 16, 1921, of Acting Judge Advocate General	132-134
Outline of	720-721
Text of	150-171
Text of supplemental contract	651-657
Work largely completed before execution of (Mr. Martin)	647
Cost (memorandum of Chief of Ordnance)	22
Description of (Major Burns)	213
Description schedule in contract	167-169
Every dollar spent by Government on this plant is on property of Alabama Power Co. (Mr. Martin)	679
Gorgas plant is not adapted for two operations (Mr. Martin)	663
Government has vested right to acquire, by condemnation, interests of Alabama Power Co. in Gorgas-Warrior steam plant (Mr. Quin)	695-696
Government is bound to receive a very substantial value for (Mr. Martin)	1031

Gorgas-Warrior steam plant—Continued.	Page.
Government plant can be separated from plant of Alabama Power Co. (Mr. Worthington)-----	361-362
If Alabama Power Co. is unwilling to purchase, the Government must remove plant (Major Burns)-----	210
If Congress should cause this plant to be condemned and taken over, the necessity for thus taking it over could not arise in any court (Mr. Oliver)-----	765
If left in Mr. Ford's proposition, the Government must condemn contractual rights, plant, and land of Alabama Power Co., involving about \$4,000,000 (Mr. Dent)-----	748
If left in Mr. Ford's proposition, the Government will be giving to Mr. Ford equivalent of approximately \$9,000,000 (Mr. Dent)-----	748
Indivisible and incapable of physical division from plant of Alabama Power Co. (Mr. Miller)-----	676-677, 688
Investment of Alabama Power Co. in steam plant at Gorgas compared with investment of the Government (Mr. Martin and Mr. Miller)-----	666-667, 673-674, 679
Is practically part of Alabama power plant (Major Burns)-----	209
Legislation giving authority to executive branch of Government to sell such property as, text of (Mr. Martin)-----	645
Letters between Ordnance Department and Alabama Power Co., pertaining to construction of Gorgas-Warrior plant and transmission line, which led up to contract between the Alabama Power Co. and the Government, text of-----	709-722
Letters of December 7, 1917, from Ordnance Department to Alabama Power Co. authorizing construction of Gorgas extension (Mr. Martin)-----	731-732
National defense act, relevancy of, to construction of. (See Legal questions involved: National defense act.)	
Necessary that it be included in Ford proposal (Mr. Worthington)---	351
Not necessary for Ford to have this plant or the property that belongs to the Alabama Power Co. in order to operate his project (Colonel Joyes)-----	1075
Offer of Alabama Power Co. to purchase, text of proposal-----	776
Offers of Mr. Ford to purchase, text of proposals-----	11, 15
Operated, maintained, and insured at expense of Alabama Power Co. (Mr. Martin)-----	673-674
Option to purchase by the Alabama Power Co., legality questioned (Secretary of War's report)-----	5-6
Power cheaper than at plant No. 2, because transportation of coal is not necessary (Mr. Mayo)-----	257
Rented to Alabama Power Co.—	
Company paid Government \$77,211.61 during 1921 for use of (Mr. Martin)-----	683
Netted the Government about \$75,000 during calendar year 1921 (Secretary of War's report)-----	5
Reported upon by Secretary of War-----	5, 6, 8
Sale of plant—	
Acts of May 10 and July 9, 1918, conferred no authority for Government to sell such property as Gorgas-Warrior steam plant (Mr. Oliver)-----	765-767, 770
Alabama Power Co. understood clearly that there was no law under which the United States could agree to sell Warrior extension to the company (Mr. Martin)-----	644
Ordnance Department has an absolute right to sell plant without reporting to Congress (Mr. Dent)-----	752, 761
Salvage value estimated by Chief of Ordnance-----	18
Should be eliminated from Ford proposal (Major Burns)-----	211-212
Should be sold to Alabama Power Co. (Major Burns)-----	211
Situation which led to construction of (Mr. Martin)-----	642-651
Statement about (Major General Williams)-----	69
Statement by Mr. Martin, in answer to statements made before Military Affairs Committee of the House of Representatives on March 8, 1922-----	1029-1031
Suggested basis for contract between Alabama Power Co. and United States for power for Air Nitrates Corporation plant at Sheffield, text of-----	709-710, 729-730

Gorgas-Warrior steam plant—Continued.	Page
Suggested basis for lease or purchase of proposed steam plant, text of	74
Was not physically possible to extend and increase original plant and make extension a separately contained plant (Mr. Martin) ..	62
Haber process:	
Description of—	
Doctor Parsons	1116, 1133-114
Major Burns	20
Mr. Mayo	22
Report of Muscle Shoals committee of American Farm Bureau Federation	53
Discussion of (Doctor Tolman)	316-317
Explosion at Oppau had nothing to do with (Doctor Parsons) ..	1124, 112
Government now possesses two important improvements in (Mr. Butler)	99
Has practically already superseded the cyanamid process (Doctor Parsons)	112
Is operating at full capacity in Germany, turning out 300,000 tons of nitrogen per year (Doctor Parsons)	112-
Most efficient process for the fixation of atmospheric nitrogen (Mr. Butler)	99C
Much more efficient method of producing nitrogen compounds than the cyanamid process (Mr. MacDowell)	522
Nitrate plant No. 1 could be redesigned at a maximum cost of \$4,000,000 and made most efficient Haber process plant in the world (Mr. Butler)	903
Requires about one-fifth of the horsepower used by the cyanamid process (Mr. MacDowell)	522
Requires only one-tenth of the power of the cyanamid process, and about one-fiftieth of the power of the arc process used in Norway (Doctor Parsons)	1135
There is no patent which keeps us from using it. It will make ammonia cheaper than any other process for the fixation of nitrogen from the air (Doctor Parsons)	1122
Haber process, modified by General Chemical Co.:	
First trial of, at nitrate plant No. 1 was not thoroughly successful. Does not consider plant was a failure (Doctor Parsons)	1136
Has never been worked out (Mr. Worthington)	330
Now accomplished fact in America on commercial basis (Major Burns)	208
Statement about (Major Burns)	208
Unsuccessful at nitrate plant No. 1 (Major General Williams)	78
Hammitt, J. O., vice president, Air Nitrates Corporation:	
Letter of March 2, 1922, supplying certain information for the record, text of	969-970
Statement	443-519
Harris, Forbes & Co., banker control over Alabama Power Co. explained (Mr. Frothingham)	957
Horsepower:	
Allotment of, to fertilizer plant under Ford proposal (Mr. Worthington)	385-386
Cost of installing each, at Dam No. 2 (report of Muscle Shoals committee of American Farm Bureau Federation)	561
Cyanamid process requires more than Haber or Claude processes (Mr. MacDowell)	522
Developable at Dam No. 2 (Major General Beach)	124
Developable at Muscle Shoals—	
Mr. Cooper	420
Mr. Miller	369
Discussion of amounts to be produced at various units and rates at which it could be sold (Mr. Mayo)	261-262, 275-290
Government could lease, on basis of a return of 5 per cent on all money invested in Dam No. 2 (if Ford proposal be not accepted) (Mr. Cooper)	417
Keokuk Dam (Mr. Cooper)	426

Horsepower—Continued.	Page.
Table showing amounts generated at the principal completed hydroelectric developments in the Carolinas, Georgia, Alabama, and Tennessee (Mr. Worthington)-----	389
Table showing water power at Muscle Shoals-----	555
(See also Power.)	
Hughes, Charles Evans, counsel for American Cyanamid Co. in connection with protection article of contract (Mr. Hammitt)-----	445,
451-452, 474, 488, 501	
Hull, Col. John A., Acting Judge Advocate General:	
Statement-----	131-205
(See also Judge Advocate General's Office.)	
Hydroelectric development:	
Coffin & Burr have handled bonds on hydroelectric properties all over the United States and in Canada (Mr. Frothingham)-----	959
Description of entire region of Mississippi, Tennessee, Louisiana, Texas, Oklahoma, and Arkansas, in relation to (Mr. Frothingham)-----	947-948
Hydrographs, Tennessee River, at Florence, Ala-----	118, 119
Interest:	
Compounded at 4 per cent on Government's investment of \$88,175,475, would be a loss to Treasury of \$1,275,000,000 at end of lease period (Mr. Cooper) (analysis of this statement by Mr. Cooper, pp. 638-639)-----	410, 414
Compounding, on investments of Government, as figured by Mr. Cooper can not be done—	
Mr. Bower-----	628
Analysis of Mr. Cooper's statement by Mr. Mayo-----	976-977
Cost of carrying the expenditures during preliminary periods not customarily considered in Government work (memorandum of Chief of Engineers)-----	20
Fair to assume that 4 per cent Mr. Ford is to pay will be above average rate for Government bonds (Mr. Almon)-----	1007
Government does not receive, for investments in river and harbor improvements, railroad land grants, etc. (Mr. Quin and Mr. Worthington)-----	391-392, 394-395
Under Alabama Power Co. proposal the 100,000 horsepower that is furnished the Government has an equivalent money value which might be taken as interest on the Government's investment already put into Dam No. 2 (Mr. Frothingham)-----	954
Interest rates:	
Bonds for payment of construction of dams could be issued by the Government in blocks at 4 per cent (Mr. Mayo)-----	272, 980
Conservative to use 4 per cent in calculating cost to United States Treasury of Ford proposal (Mr. Cooper)-----	414
Credit of the Government can be lent to Muscle Shoals proposition at 4 per cent (Mr. Mayo)-----	268
Credit of the Government will be loaned for Muscle Shoals proposition at not to exceed 4 per cent (Mr. Worthington)-----	873
Hydroelectric developments (Mr. Worthington)-----	355
If Government charges Mr. Ford 8 per cent on water power, farmers will pay it in cost of fertilizer (Mr. Bower)-----	631-632
Table showing electric light and power security issues in 1921-----	356
Table showing interest-bearing debts of the Government (Mr. Silver)-----	608
Table showing per cent of interest on Government loans now outstanding in the shape of bond issues (Mr. Almon)-----	1007
Under Engstrom proposal Government pays 5 per cent in addition to the cost of construction (Mr. Butler)-----	911, 919
Will cost the Government 4½ or 4¾ per cent to get money on which Mr. Ford will pay 4 per cent (Mr. Hill)-----	382
Investment of the Government:	
In properties included in Alabama Power Co. proposal amounts to \$34,000,000 (Mr. Quin and Mr. Martin)-----	852-853
In properties included in Ford proposal amounts to approximately \$85,000,000 (Secretary of War's report)-----	8
(See also Expenditures of the Government.)	

Joyes, Col. J. W., Ordnance Department:	Page

Statement of Mr. MacDowell, president-----	519-542
ational Grange:	
Authorized to designate candidates for a board to control price and distribution of fertilizer products; text of Ford proposals-----	12, 16
Membership of (Mr. Silver)-----	577
Resolut on adopted February 8, 1916, regarding fixation of nitrogen as a fertilizer (Mr. Bower)-----	615-616
atural resources:	
Alabama (Mr. Quin and Mr. Worthington)-----	396
Tennessee (Mr. Quin and Mr. Worthington)-----	396
Tennessee River valley (Mr. Worthington)-----	386-388
Navigability of Tennessee River:	
General Beach-----	122, 129
Hon. A. A. Taylor-----	320, 321-322
Mr. Worthington-----	370-371, 404
Navigation:	
Amount estimated by United States engineers before the war as chargeable to, was \$8,575,000 (Mr. Almon)-----	1004
Building of dams necessary to complete (Mr. Martin)-----	813, 849-850
Completing dams will increase amount of (Mr. Quin)-----	293
Dam No. 2 will render 14.7 miles of Muscle Shoals navigable; Dam No. 3, 63 additional miles (Secretary of War's report)-----	5
If nitrate plant No. 2 is operated, there will be approximately 400,000 tons of sludge per year to be disposed of, and if run into the Tennessee River it will damage navigation far more than the locks that may be put in will help it (Doctor Parsons)-----	1126
Proposal of Alabama Power Co. would make river navigable to extent of pool created by Dam No. 2 (Mr. Martin)-----	813
Would be extended about 90 miles by proposed dams (Mr. Mayo)-----	295
Would not alone justify proposed expenditures of Government (Mr. Worthington)-----	407
(See also Transportation.)	
Nitrate:	
War Department now has on hand about 220,000 tons (Mr. Weeks)-----	57
Nitrate plants:	
Alterations, additions, and changes in, text of Engstrum proposal-----	897, 898
Nitrate plant near Cincinnati, Ohio—cost, \$7,321,400—has been retained by War Department (Major General Williams)-----	86
No. 1—	
Acreage of plant site, 1,900 acres-----	18
Chief defects in, and remedies therefor (Mr. Butler)-----	990
Chief of Ordnance has stated that if modified and made an operating plant, capacity would be 30 or more tons per day of ammonia (Mr. Butler)-----	913
Cost of (report of Muscle Shoals committee of American Farm Bureau Federation)-----	551
Cost of construction, \$12,887,941.31 (memorandum of Chief of Ordnance)-----	21
Cost of maintenance during fiscal year 1921, \$75,506.42 (memorandum of Chief of Ordnance)-----	21
Cost of maintenance or stand-by expense, table showing-----	556

Nitrate plants—Continued.

No. 1—Continued.

Page

Could be put into operating form for \$1,500,000 to \$2,000,000, with about 30 tons a day capacity (Doctor Parsons).....	113
Has a complete steam plant ready to operate, which can be used until the dam is completed (Mr. Butler).....	94
Idle, proved unsuccessful in a test operation (Secretary of War's report).....	5
Instead of being a failure, plant No. 1 has thoroughly justified itself (Doctor Parsons).....	112
Letter of Acting Judge Advocate General in re contract with General Chemical Co., text of.....	174-17
Mr. Engstrum proposes to use for the manufacture of nitrates (Mr. Butler).....	90
National defense act, plant was constructed under authority of (Colonel Joyes).....	105
Not desirable to produce nitrates there (Mr. Worthington)....	362-36
Offers of Mr. Ford to purchase, text of.....	11, 1
The one possibility of making fertilizer with any degree of cheapness is through the development of (Doctor Parsons).....	112
Ordnance Department has recommended it be disposed of (Major Burns).....	208
Reported upon by Secretary of War.....	5
Salvage value estimated by Chief of Ordnance.....	18
Should not be scrapped; could be redesigned and made most efficient Haber process plant in the world (Mr. Butler).....	903, 990
Statement about—	
Major Burns.....	207-208
Major General Williams.....	67-68
Synthetic process of the General Chemical Co. was used at (Mr. Almon).....	1002
To be used for manufacturing parts for Ford automobile business (Mr. Mayo).....	258

No. 2—

Acreage of plant site, not including Waco quarry, 2,306 acres, acquired for \$237,711 (Secretary of War's report).....	5
Air Nitrates Corporation would make no offer for, if the Government continues to hold it, unless the Government provides a subsidy (Mr. Hammitt).....	484
Alabama Power Co. does not propose to maintain in condition to produce nitrates, but undertakes to give Government power and money (Mr. Hull and Mr. Martin).....	813
American Cyanamid Co. has made no profit from construction of (Mr. Hammitt).....	446
Ammonium nitrate of no use for national defense, without products of other plants which have been scrapped (Mr. Hammitt).....	484
At its present capacity would produce about 2,000,000 tons of fertilizer (Mr. Almon).....	1006
Authority for construction of, discussion of (Colonel Joyes and Mr. Wright).....	1088-1099
By-product coke-oven interests actively engaged in defeating completion of (Mr. Bower).....	621-622
Calcium carbide could be produced at (Mr. Parker).....	481
Can not be operated commercially without a subsidy (Mr. Hammitt).....	456
Can produce about one-fourth of all nitrogen used in fertilizer (Mr. Weeks).....	45
Can produce one-half of the nitrogen content of fertilizer used in the United States annually (Major Burns).....	230
Capital necessary for conversion into ammonium sulphate plant estimated at \$3,000,000 (Major Burns).....	209, 220
Cost of (report of Muscle Shoals committee of American Farm Bureau Federation).....	551
Cost of construction, including Waco quarry, \$67,555,355.09 (memorandum of Chief of Ordnance).....	22
Cost of maintenance during fiscal year 1921, including Waco quarry, \$201,674.63 (memorandum of Chief of Ordnance).....	22

Nitrate plants—Continued.

No. 2—Continued.

	Page.
Cost of maintenance estimated at \$4,000,000 for 20-year period (Major General Williams).....	85
Cost of maintenance or stand-by expense, table showing.....	556
Cost to the Government to maintain in stand-by condition (Major Burns).....	239
Could be maintained by amount payable for power leased (Major General Williams).....	89
Cyanamid process of the American Cyanamid Co. is used at (Mr. Almon).....	1002
Depreciation estimated at \$2,500,000 annually (Mr. Mayo).....	249
Depreciation estimated at \$6,000,000 for 6 years (Major General Williams).....	85
Description of (report of Muscle Shoals committee of American Farm Bureau Federation).....	544-546
Economical operation of, depends chiefly upon completion of hydroelectric plant of Dam No. 2 (report of Muscle Shoals committee of American Farm Bureau Federation).....	560
Fertilizer products produced not to be sold at a profit in excess of 8 per cent (text of Ford proposals).....	12, 16
Furnaces could be changed to produce fertilizer (Mr. Swann).....	435
Government can never hope to do anything with, and anybody that runs it will lose money very rapidly (Dr. Parsons).....	1125
Government has no authority to grant a license for use of patents of American Cyanamid Co. to a lessee (Mr. Hamnitt).....	508
Idle, except that power plant is leased (Secretary of War's report).....	5
If changed it will have to be practically wiped off the ground before it can be used for any other method for fixing nitrogen (Dr. Parsons).....	1130
If it can not be operated at a profit, then no subsidy is involved in selling plants to Mr. Ford for \$5,000,000 (Mr. Bower).....	632
If Mr. Ford runs to its capacity to make nitrates, he will lose all his fortune in 20 years (Doctor Parsons).....	1138
If operated there will be approximately 460,000 tons of sludge per year to be disposed of, and if run into the Tennessee River it will damage navigation far more than the locks that may be put in will help it (Doctor Parsons).....	1126
Importance of location of, for manufacturing nitrates (report of Muscle Shoals committee of American Farm Bureau Federation).....	548
Interpretation of Ford proposal relative to guaranty to use, for the fixation of nitrogen—	
Major Burns.....	215
Mr. Worthington.....	403
Is not sound public policy for Mr. Ford to use, for manufacture of fertilizer (Mr. MacDowell).....	537
Letter from Doctor Parsons to Chief of Ordnance, dated October 31, 1917, objecting to the installation of plant No. 2, text of. 1117-1119	
Maintenance of, for production of nitrates for war purposes, recommended (Mr. MacDowell).....	529, 538-539
Mr. Ford could not state he would use all products of, for fertilizer alone (Mr. Worthington).....	366-367
Mr. Ford intends to produce a complete fertilizer at 8 per cent above cost (Mr. Mayo).....	253
Mr. Ford or anyone else can not operate plant No. 2 to make fertilizer (Doctor Parsons).....	1138
Mr. Ford would be operating and turning out fertilizer in less than 15 months if Congress voted to accept Ford offer and directed condemnation of Gorgas plant (Mr. Oliver).....	999
National defense act—	
Plant was not constructed under authority of (Colonel Joyes).....	1057
Relation of, to construction of plant (Mr. Hamnitt).....	447, 448, 460

INDEX.

plants continued.

Continued.

	Page
needs a little more power than is really present in the generating unit of its steam power plant to produce its full rated production (Colonel Joyes).....	1046
No need for products of, for agriculture at present (Mr. Mc-Tuwell).....	521-528
Number of finished tons of fertilizer which could be produced (Mr. Mayo).....	302, 308-309
Offers of Mr. Ford to purchase, text of.....	11-15
Option to purchase by Air Nitrates Corporation, legality questioned (Secretary of War report).....	5-6
Power from Gorgas-Warrior steam plant not needed to operate (Major General Williams).....	2
Power plant of. (See Power plants.)	
Present equipment of, Government to produce nitrates (Mr. Weeks).....	3
Procedure the Government might follow in making proposition to sell to Air Nitrates Corporation (Mr. Hammitt).....	49
Production estimates of nitrogen compounds (Dr. Whitney).....	34
Production of high-grade fertilizers at, will reduce freight rates (Mr. Bower).....	627
Production of nitrogen compounds at—	
Opinions of Dr. Caro and Mr. Washburn on (Mr. Mayo).....	252-253
Statement of Dr. Caro on (Mr. Silver).....	564
Products which can be manufactured at, and commercial outlook (Dr. Tolman).....	313-319
Proposal of Alabama Power Co. limits operation of, to 100,000 secondary horsepower, which would mean shutting down perhaps 4, 5, or 6 months of the year (Mr. Bower).....	630
Reported upon by Secretary of War.....	5
Salvage value estimated by Chief of Ordnance.....	18
Salvage value estimated by Mr. Hammitt.....	506
Statement about—	
Major Burns.....	208
Major General Williams.....	67-69
Statement showing number of tons of commercial fertilizer Mr. Ford could make (Mr. Worthington).....	367
Steam plant, kilowatt output of.....	220
Table showing estimate of results of operation by Government of United States nitrate plant No. 2 for period of six years (Major General Williams).....	84-85
Table showing manufacturing cost of—	
Ammonium nitrate at.....	553
Ammonium sulphate at.....	554
Time necessary for conversion of fertilizer plant into plant for producing explosives (Major General Williams).....	96
Time necessary for conversion of phosphoric acid furnaces for making fertilizer back into carbide furnaces for producing ammonium nitrate (Mr. Swann).....	439
Time necessary to change, from stand-by condition to capacity production, estimate of (Major General Williams).....	86
To be turned over to the United States if required for the national defense—	
Text of Alabama Power Co. proposal.....	776
Text of Ford proposals.....	12, 16
Use of, for manufacture of fertilizer ingredients (Mr. Hammitt).....	462-464
Value to Government when operated under section 16 of Mr. Ford's contract (Mr. Mayo).....	295
War-time production of explosives at, Mr. Ford would not object to added clause in deed regarding (Mr. Mayo).....	303
Was constructed out of money appropriated for armament of fortifications (Colonel Joyes).....	1057
Will be a simple matter to redesign, ready to make either nitrates for fertilizer or nitrates for explosives; maximum estimate \$3,000,000 (Mr. Butler).....	904

Nitrate plants—Continued.

	Page.
Nos. 1 and 2 will produce about one-third of fertilizer needed (Mr. Butler)-----	917
Operation of nitrate plant No. 1, text of Ford proposal-----	15
Operation of, text of Engstrum's proposal-----	897
Power to be developed at Dam No. 3 and other dams, under Engstrum proposal, should be conserved and used to operate more nitrate plants by the Haber process (Mr. Butler)-----	991
Sale of—	
Memorandum of January 17, 1922, of Acting Judge Advocate General-----	173-174
Sufficient amount of power would be furnished under Engstrum proposal to operate both plants at their full capacity (Mr. Butler)-----	991
Table showing maintenance or stand-by expense of nitrate plants Nos. 1 and 2-----	556
Table showing world capacity of air nitrogen plants (Mr. Mayo)-----	250
Nitrate preparedness. (See National defense.)	
Nitrates:	
British Nitrate Commission—	
Quotations from report of (Mr. Silver)-----	557-558
Reference to report of (Mr. Worthington)-----	364-365
Can produce enough of, at plants Nos. 1 and 2 now to have a beneficial effect upon the price of Chilean nitrates (Mr. Butler)-----	918
Chilean, are an absolute monopoly (Mr. Bower)-----	624
Chilean beds will be exhausted in 100 years (Mr. Bower)-----	619
Chilean, duty paid for, by United States up to July 1, 1919, amounted to \$163,647,680.68 (Mr. Bower)-----	624
Chilean, present cost about \$48 or \$50 per ton, practically one-fourth of which is a duty paid to the Chilean Government. Price can be put up or down, because it is a monopoly (Mr. Butler)-----	924
Editorial from the Oil, Paint, and Drug Reporter, of January 23, 1922, regarding supply of (Mr. Bower)-----	626
If the Muscle Shoals project is to be used to benefit agriculture, then nitrates produced there must be sold at a price below the present selling price of Chilean nitrates (Mr. Butler)-----	906
Letter from the General Chemical Co., dated June 5, 1917, placing certain patents and processes for the production of nitrate at the disposal of the President, text of-----	203-204
Mr. Engstrum proposes to use nitrate plant No. 1 for the manufacture of (Mr. Butler)-----	902
Mr. Engstrum will build extra dams as fast as necessary and use all this development in producing cheaper nitrates (Mr. Butler)-----	904, 913
Mr. Engstrum will never have to make a pound of, under his contract (Mr. Levering)-----	940
Mr. Ford can not make, at present at 8 per cent profit, but he can make automobiles with greater profit at Muscle Shoals than he can in Detroit (Mr. Butler)-----	992
Nitrate commission—	
Personnel of (Doctor Parsons)-----	1115-1116
Report of, references to (Colonel Joyes)-----	1062, 1064, 1092
Produced at Muscle Shoals should be sold to farmers at a price to be approved by the Secretary of Agriculture (Mr. Butler)-----	905, 993
Under proposal of Mr. Ford there will not be produced any more nitrates at the end of 100 years than will be produced the first year of the lease (Mr. Butler)-----	992
United States used last year only 175,000 tons of, for fertilizers, to Germany's 500,000 tons, and at least half of what United States used was imported from Chile (Mr. Butler)-----	901
Nitride process:	
Description of (Mr. Mayo)-----	251
Nitro, W. Va., smokeless powder plant: Cost, estimated salvage value, and sale price, figures of (Major General Williams)-----	86
Nitrogen:	
About 7 tons to every square foot of ground (Mr. Mayo)-----	292
Consumption and supply of inorganic nitrogen in United States, 1900-1920, diagram showing (Major General Williams)-----	75

Nitrogen—Continued.

	Page.
Conversion of atmospheric nitrogen, description of (extract from a paper by R. O. E. Davis, United States Bureau of Soils) (Mr. Mayo)	21
Demand for, is increasing faster than the supply (Mr. Butler)	980-990
Demand for, to replace quantities taken from soil by crops— Mr. Bower	68
Report of Muscle Shoals Committee of American Farm Bureau Federation	564-566
Fixed, in the future, is going to be made by a synthetic ammonia process, simply for the reason that there is no other process in the world that can compete with it commercially (Doctor Parsons)	112
Fixed Nitrogen Research Laboratory, statement of Doctor Tolman, director of	313-319
Haber process is the most efficient process for fixation of atmospheric nitrogen (Mr. Butler)	99
High price of, has established lower grade of fertilizer (Mr. Bower)	62
Limiting factor in crop production in most worn-out soils (Mr. Bower)	61
Need for, increasing at the rate of 1½ per cent a year. At end of 100 years our need will be greater than could be supplied by the whole 1,000,000 horsepower which can be developed at Muscle Shoals (Mr. Butler)	991
No need for product for agriculture at present (Mr. MacDowell) ..	522, 538
Production of, under cyanamid process, will be obsolete in five years (Mr. MacDowell)	521, 522
Quotations from report of British Nitrate Commission showing reasons for recommendation that nitrogen fixation process should be established in Great Britain (Mr. Bower)	625
Research department for the development of processes for the fixation of, text of Engstrom proposal	897
Table showing estimated supply and consumption of, for 1924 and 1930, in tons of pure nitrogen	555
Table showing nitrogen in red clover and cowpeas	555
Table showing world's production of mixed inorganic nitrogen	556
Nitrogen compounds:	
Are by-products of industries that depend upon the sale of a major product for existence (Mr. Bower)	620
Discussion of— Doctor Tolman	313-319
Doctor Whitney	322-349
Mr. Ford could probably stabilize price (Major Burns)	216
No business in United States engaged primarily in production of (Mr. Bower)	620
Percentages of nitrogen in (Major Burns)	223
Production of, at nitrate plant No. 2, opinions of Dr. N. Caro and Mr. Washburn on (Mr. Mayo)	252-253
Production of, at nitrate plant No. 2, statement of Doctor Caro on (Mr. Silver)	564
Table showing comparative prices of	556
Will be produced much more efficiently under the Haber and Claude methods than by the cyanamid process (Mr. MacDowell)	522
(See also Ammonium nitrate, and Ammonium sulphate.)	
Nitrogen products committee of the Ministry of Munitions of War of the British Government. (See British Nitrate Commission).	
Nitrogen situation:	
Analyzed by Chief of Ordnance	17
Atmospheric Nitrogen Corporation of Syracuse, Haber process has been developed by (memorandum of Chief of Ordnance)	17
Discussion of (Mr. MacDowell)	523-527
Necessity for an increased nitrogen supply (Report of Muscle Shoals Committee of American Farm Bureau Federation)	549-550
Nitroguanidine: Discussion of (Doctor Tolman)	315
Oil, Paint, and Drug Reporter: Editorial from issue of January 23, 1922, regarding nitrate supply (Mr. Bower)	626

	Page.
Old Hickory plant: Cost, estimated salvage value, and sale price, figures of (Major General Williams).....	86
Oliver, Hon. William B., Representative in Congress from Alabama: Statement.....	764-774, 833-836, 994-1002
Operating costs: Annual expenses of Mr. Ford, when dams Nos. 2 and 3 are completed, estimate of (Mr. Cooper).....	420
Operation of dams and locks. (See Repairs, maintenance, and operation of dams and locks).	
Oppau: Explosion at, had nothing to do with the process by which ammonium nitrate was produced (Doctor Parsons).....	1124, 1125
Ordnance, Chief of:	
Analysis of the Ford proposal.....	17-19
Table showing cost of United States nitrate plants Nos. 1 and 2 and Warrior-Sheffield power station and transmission line.....	21-22

Ordnance Department:	
Contract with Air Nitrates Corporation—	
Text of.....	135-144, 144-150
Text of first contract of November 16, 1917.....	511-518
Contract with Alabama Power Co. Text of.....	150-171
Contract with American Cyanamid Co. Text of.....	135-144, 144-150
Letters between department and Alabama Power Co. pertaining to construction of Gorgas-Warrior steam plant and transmission line, which led up to the contract between the company and the Government, text of.....	709-722
Letters of December 7, 1917, giving the Alabama Power Co. orders to construct transmission line, furnish power to Sheffield, and to construct the Gorgas-Warrior steam plant (Mr. Martin).....	730-732
Memorandum of conference of December 8, 1917, between Alabama Power Co. and the department, text of.....	712-713
Owl Fumigating Corporation:	
Intercompany relations with American Cyanamid Co. (Mr. Hammitt).....	504
Panama Canal: Annual total revenues compared with terms of Ford offer (Mr. Almon).....	1004
Parsons, Dr. Charles L., consulting chemist, statement.....	1115-1145
Patents:	
American Cyanamid Co.—	
Government has no authority to grant a license for use of, to a lessee of nitrate plant No. 2 (Mr. Hammitt).....	503
List of.....	149-150
Principal ones will expire in 1932 (Mr. Hammitt).....	478
General Chemical Co., letter of Dec. 14, 1921, of Acting Judge Advocate General, text of.....	174-177
Payments by the Government: Under Engstrum proposal, cost plus 5 per cent of construction, text of proposal.....	899
Payments to the Government:	
Under Alabama Power Co. proposal—	
Compared with cost of plants (Mr. Martin).....	808-809, 878-879
Text of proposal.....	776
Under Engstrum proposal—	
Compared with Ford offer (Mr. Butler).....	993
Text of proposal.....	898-899
\$3,500,000 a year on Government's investment of \$30,000,000 (Mr. Butler).....	993
Under Ford proposal—	
Compared with construction costs of dams—	
Mr. Miller and Mr. Mayo.....	262-265
Mr. Weeks and Mr. Parker.....	49
Compared with cost of plants (Mr. Weeks).....	45-47, 52
Compared with estimate of salvage value made by Chief of Ordnance.....	18
Considered inadequate (Major General Williams).....	71-72
Fair to assume that 4 per cent which Mr. Ford is to pay will be above average rate for Government bonds (Mr. Almon).....	1007

Payments to the Government—Continued.

	Pag.
Under Ford proposal—Continued.	
If Mr. Ford pays 4 per cent interest on total cost of dams Nos. 2 and 3 (\$83,175,475), would save U. S. Treasury \$1,275,000,000 during lease period (Mr. Cooper).....	43
(Analysis of this statement by Mr. Cooper).....	638-639
Money on which Mr. Ford will pay 4 per cent will cost the Government 4½ or 4¼ per cent (Mr. Hill).....	32
Reported upon by Chief of Engineers.....	19-1
Reported upon by Secretary of War.....	67
Statement No. 1—Re difference between Mr. Ford's lease payments to the United States Treasury and the amount the Treasury will have to pay out if Mr. Ford's proposal is accepted as written (Mr. Cooper).....	410-411
Statement No. 4—Re showing if 4 per cent interest is paid by Mr. Ford on total cost of dams Nos. 2 and 3, and pays \$79,432 annually to amortize \$83,175,475, which is the above total cost (Mr. Cooper).....	41:
\$2,400,000 a year on Government's investment of \$60,000,000 (Mr. Butler).....	99:
Will cost the Government 4½ or 4¼ per cent to get money on which Mr. Ford will pay 4 per cent (Mr. Hill).....	38:
(See also Sinking fund.)	
Phantom freights:	
Description of, in connection with steel industry (Mr. Silver)....	567-568
Phosphate rock: Principal deposits are Tennessee lump rock very near Muscle Shoals and in Florida (Mr. Swann).....	440
Phosphates:	
Necessary ingredient of fertilizer, can be obtained within a radius of 100 miles of plants (Mr. Mayo).....	281
(See also Potassium phosphate.)	
Phosphoric acid:	
Method of producing and use as fertilizer ingredient (Mr. Swann).....	432-433
Phosphate rock can be smelted in an electric furnace and phosphoric acid collected for use in fertilizer industry which will reduce present costs (Mr. Swann).....	434
Table showing estimated cost (exclusive of interest charges) of producing phosphoric acid by the electric-furnace method, assuming power at \$25 per horsepower year.....	554
Use of nitrate plant No. 2 to manufacture, as fertilizer ingredient (Mr. Hammitt).....	464
Pittsburgh plus agreement, description of (Mr. Silver).....	567-568
Plants:	
Salvage value of. (See Salvage value of plants.)	
Table showing food requirements of (Mr. Bower).....	627
Potash:	
Approximately 100 per cent of supply being imported at present (Mr. Bower).....	672
Necessary ingredient of fertilizer—	
Cheaper to buy French and German product that make, at Muscle Shoals (Mr. MacDowell).....	535, 536
Cheaper to buy German product that produce at present (Mr. Swann).....	441
Difficult to use homemade product because of high freight rates (Mr. MacDowell).....	533
Possibility of making, near plants (Mr. Mayo).....	283
Two plants in vicinity of Searles Lake, in San Bernardino County, Calif. (Mr. MacDowell).....	540
Potassium phosphate, if produced at Muscle Shoals, could be used to fix by-product coke oven ammonia gas and produce a complete fertilizer of very high concentration (Mr. Swann).....	433
Power:	
Alabama Power Co. charged Government 6½ mills per kilowatt-hour for (Mr. Martin).....	674-676
Alabama Power Co. would not be injured by development of cheap power for sale by Mr. Ford; the public would be greatly injured (Mr. Frothingham).....	957

Power—Continued.

	Page.
Amount of, needed to produce 2,000,000 tons of commercial fertilizer at Muscle Shoals (Doctor Parsons)-----	1126
Capacity in kilowatt hours of Dams Nos. 2 and 3 (statement No. 2, Mr. Cooper)-----	411
Cheaper to make at Gorgas-Warrior steam plant than at plant No. 2 (Mr. Mayo)-----	257, 292
Cheaper to make at Gorgas-Warrior steam plant than at the two stand-by plants at present (Mr. Butler)-----	914
Comparison of amount developable at Muscle Shoals with development in the Carolinas, Georgia, and Tennessee (Mr. Worthington)-----	389
Cost of transmission from Muscle Shoals to Southern Power Co.'s market prohibitive (letter of Mr. Duke)-----	116
Demand for sale of, discussion of (Mr. Stoll and Mr. Butler)-----	932
Developable at Dam No. 2 (Mr. Martin)-----	810
Developable at Muscle Shoals—	
Letter from Mr. Duke-----	115-116
Letter from southeastern power companies-----	118
Mr. Cooper-----	420
Report of Muscle Shoals committee of American Farm Bureau Federation-----	560-561
Developable on Tennessee River (Mr. Worthington)-----	392
Discussion of amounts of horsepower to be produced at various units, and rates at which it could be sold (Mr. Mayo)---	261-262, 275-280
Distance transmissible—	
Alabama Power Co. sending 250 miles (Major General Beach)---	101
Four hundred miles (Mr. Cooper)-----	428
Economical operation of nitrate plant No. 2 depends chiefly upon completion of hydroelectric plant at Dam No. 2 (report of Muscle Shoals committee of American Farm Bureau Federation)-----	560
Estimate of interest obtainable from the 100,000 horsepower salable by the Government (Doctor Parsons)-----	1144
Estimates of sales price will prove disappointing (letter of Mr. Duke)-----	116-117
If Mr. Ford were to pay 4 per cent on \$83,000,000 (total cost of dams) he would still be getting cheap power (Mr. Cooper)-----	421
Market for, from development of Dam No. 2 (Mr. Martin)-----	798-799
Market for, from Muscle Shoals (letter from southeastern power companies)-----	118
Market for, from Muscle Shoals dam, overestimated (letter from Mr. Duke)-----	116
Mr. Engstrum proposes to sell surplus at wholesale, and set aside 1 mill for each kilowatt-hour of power sold to be paid into United States Treasury as rental for the lease of the property (Mr. Butler)-----	906, 911, 912, 925, 928, 993
Mr. Engstrum's corporation hopes to sell at wholesale to all companies nearby (Mr. Butler)-----	912
Mr. Ford intends to use all produced (Mr. Mayo)-----	262, 265
Mr. Ford wishes to take interest burden off of (Mr. Worthington)---	380
Mr. Ford would get cheapest power on the American Continent (Mr. Cooper)-----	421
Mr. Ford would sell to railroad in order to get cheap transportation rates (opinion of Mr. Worthington)-----	358
Monopoly of, for the development of one special thing which has been done at Niagara, should be avoided (Mr. Butler)-----	934
One of principal factors considered by Mr. Ford in making bid (Mr. Mayo)-----	275
Original interest of Mr. Ford in Muscle Shoals proposition (Mr. Worthington)-----	369
Possible demand for one-third of total producible within 200 miles of Muscle Shoals (Mr. Mayo)-----	282
"The power situation during the war" extracts from this report by Colonel Keller, Corps of Engineers-----	792-795
Preferred claim of Mr. Ford's company to be furnished with, beyond 100-year period. (See Leases, renewal of.)-----	
Prices received by Alabama Power Co. for (Mr. Martin)-----	665

Power—Continued.

	Page
Probable needs of Alabama Power Co. (Major General Beach).....	12
Proceeds from sale of, to be taken as compensation, under Engstrum proposal, text of proposal.....	89
Railway electrification in Alabama and other southern States should require 240,000 horsepower (Mr. Martin).....	79
Returns to the corporation under Engstrum proposal depend entirely upon its ability to make a profit out of excess of (Mr. Engstrum).....	93
Revenue derivable from sale of, by the Government (letter from southeastern power companies).....	119, 12
Secondary, available at, Muscle Shoals, records of 30 years showing (Mr. Martin).....	86
Secondary, use of, for production of nitrates, under proposal of Alabama Power Co. (Mr. Martin).....	80
Statement No. 2, re amount of low-tension hydroelectric energy delivered to generator station bus bars that will be created by the completion of dams Nos. 2 and 3 according to the requirements of Mr. Ford's proposal (Mr. Cooper).....	411-412
Statement No. 3, re operation and maintenance of Muscle Shoals water powers (Mr. Cooper).....	412-413
Statement showing cost to Mr. Ford for, per horsepower year, at dams Nos. 2 and 3 (Mr. Mayo).....	265-266
Supplied by Alabama Power Co. (Major Burns).....	204
Table giving general statement concerning power situation in Alabama and contiguous territory (Mr. Martin).....	799
Table showing rates charged by Alabama Power Co. for power supplied to large consumers from 1917 to 1921. inclusive (Mr. Martin).....	681-682
Table showing water power at Muscle Shoals.....	555
There is possible power load by 1926 of 880,000 horsepower (Mr. Martin).....	799
To be furnished by the Alabama Power Co.—	
Estimate of value of (Mr. Martin).....	841, 845
Estimated that secondary power will be available 82 per cent of the time (Mr. Martin).....	810
Interpretation of clause regarding purposes for which the Government may use (Mr. Martin).....	814-815, 863-864
Is to be the second 100,000 horsepower available (Mr. Martin).....	814
Is to be the second 100,000 horsepower which is available 82 per cent of the time, or approximately one-fifth of the year (Mr. Miller and Mr. Frothingham).....	955
Text of proposal.....	776
To be sold by Mr. Ford—	
Conditions suggested (Secretary of War's report).....	9
Federal Power Commission might regulate (Secretary of War's report and statement).....	9, 54, 56
If Mr. Ford is to have a straight lease he would be exempted from action of Federal water-power law or laws of Alabama (Mr. Cooper).....	418
Jurisdiction of Federal Power Commission excluded under Ford proposal as written (statement No. 3, Mr. Cooper).....	413
Price will be controlled by the public utility commission of Alabama (Mr. Worthington).....	376
Public service commission of Alabama might regulate (Secretary of War's report).....	9, 54, 56
Relevancy of Alabama public utility act to (Mr. Weeks).....	54, 56
Would probably be under State of Alabama law (Mr. Mayo).....	243
To be used by Mr. Engstrum—	
Power to be developed at Dam No. 3 and at other dams would be conserved and used to operate more nitrate plants by the Haber process (Mr. Butler).....	991
Sufficient amount would be used from the beginning to operate both nitrate plants at their full capacity (Mr. Butler).....	991
Text of proposal.....	897
To be used by Mr. Ford—	
At least 100,000 horsepower will be utilized either to produce fertilizer or in a national emergency will be placed at the Government's disposal (Mr. Mayo).....	981-982

Power—Continued.	Page.
Total horsepower developed by the three steam plants to which Mr. Ford will get title is 125,000 (report of Secretary of War).....	9
Tremendous amount of, to be put in hands of one man (Mr. MacDowell).....	538
Tremendous calamity to the South if its greatest water power is taken out of field of public utility for 100 years (Mr. Cooper).....	424
Would be necessary to expend over \$50,000,000 in a manufacturing plant in order to use total producible (Mr. Mayo).....	282
(See also Horsepower.)	
Power plants:	
Nitrate plant No. 1, a complete steam plant ready to operate, and can be used until the dam is completed (Mr. Butler).....	904
Nitrate plant No. 2—	
Cost approximately \$12,000,000 (Major Burns).....	218
Leased to Alabama Power Co., lease is revocable at any time (Secretary of War's report).....	5
Offer of Alabama Power Co. to purchase, text of proposal.....	776
Present revenue from rental, minimum of \$120,000 (Secretary of War's report).....	9
(See also Gorgas-Warrior steam plant.)	
Properties Mr. Engstrom offers to lease, text of proposal.....	890-897
Properties Mr. Ford offers to purchase:	
Property which has cost the Government \$85,000,000 is to be sold outright to Mr. Ford for \$5,000,000 (Mr. Butler).....	982
Text of proposals.....	11, 15
Properties the Alabama Power Co. offers to purchase, text of proposal.....	776
Proposal of Alabama Power Co.:	
Ability of company to finance (Mr. Martin).....	857-858
Acceptance of, by Congress would mean practically a donation of \$34,002,382 (Mr. Almon).....	1013
Acceptance of, would seem not to interfere with contract of the Government with the Air Nitrates Corporation (letter from Secretary of War).....	775-776
Advantages of—	
Letter from Secretary of War.....	774-776
Mr. Martin.....	813
Analysis of (Mr. Almon).....	1013-1015
Answers the requirements of the Government 100 per cent (Mr. Frothingham).....	950-951
Coffin & Burr will probably finance (Mr. Frothingham).....	963
Compared with that of Mr. Ford (Mr. Martin).....	884-885
Completely complies with the policy of the Government as laid down by the Federal Water Power Commission (Mr. Frothingham).....	952
Defects in (Mr. Levering).....	943-944
Denounced by resolution adopted at a mass meeting of 5,000 citizens of Alabama (Mr. Oliver).....	994-996
Depreciation plus maintenance cost annually of plant No. 2, \$2,700,000 (Army engineers' estimate), is taken over by Mr. Ford, and in two years he will pay the Government more than Alabama Power Co. would pay in cash (Mr. Bower).....	631
Disadvantages of, as compared with Ford offer (Mr. Almon).....	1015
Does not guarantee to manufacture fertilizer (Mr. Bower).....	630
Estimated return Government would receive under (Mr. Fields and Mr. Martin).....	845-850
Ford proposal better than, reasons stated (Mr. Bower).....	632
If accepted, that company will have a complete and perfect monopoly of the water-power industry of the State (Mr. McDuffie).....	1023
If accepted, the company would get over \$30,000,000 worth of property for \$500,000 (Mr. McDuffie).....	1023
If the Government does not use all of 100,000 horsepower provided for in, then Alabama Power Co. would purchase what the Government does not use (Mr. Martin).....	815
Indorsed by Mr. Frothingham, of Coffin & Burr, bankers, Boston, Mass.....	950-954, 968

Proposal of Alabama Power Co.—Continued.**Page**

Involves financing of Wilson Dam and the powerhouse development, the payment of \$5,000,000 for Sheffield steam plant and Government's interest in Gorgas-Warrior plant, and in addition, furnishing Government 100,000 secondary horsepower for its uses at the nitrate plants (Mr. Martin)-----	800-80
Is deceptive in that it begins by offering \$5,000,000, but later provides that cost of the lock is to be deducted from this amount. The company would build the lock and would have its own methods of bookkeeping and it could easily make it cost the full \$5,000,000 (Mr. Almon)-----	101
Is unquestionably a better contract than that of Mr. Ford, from the standpoint of putting the capacities of the Tennessee River to the greatest possible use in the interest of the public within reach of that power (Mr. Frothingham)-----	96
Limits the operation of nitrate plant to 100,000 secondary horsepower, which would mean shutting down perhaps 4, 5, or 6 months of the year (Mr. Bower)-----	63
Makes no provision for the farmer (Mr. Bower)-----	616
National Fertilizer Association does not object to (Mr. Bower)-----	629
Opposed by Alabama Farm Bureau Federation-----	574
Opposed by petition of officials of Jefferson County, Ala. (Mr. Almon)-----	1017-1018
Opposed by resolutions adopted by Florence Chamber of Commerce, Florence Rotary Club, and Florence Exchange Club (Mr. Almon)-----	1015-1017
Opposed by resolutions of Birmingham mass meeting (Mr. Almon)-----	1017
Provisions of Federal water power act bearing upon (Mr. Martin)-----	854-855
Statement of February 15, 1922, accompanying proposal, text of-----	777-778
Text of-----	776-777
Undertakes to give Government power and money, but does not propose to maintain nitrate plant No. 2 in condition to produce nitrates (Mr. Hull and Mr. Martin)-----	813
Would relieve Government of obligation of putting up from \$50,000,000 to \$80,000,000 more in the project (Mr. Martin)-----	873
(See also Estimates: Expenditures of the Government; and Estimates: Savings to the Government.)	
Proposal of Mr. Engstrum:	
Acceptance of, does not interfere with the present contracts of the Air Nitrates Corporation and the Alabama Power Co. with the United States (Mr. Butler)-----	918
Acceptance of, does not involve any litigation in connection with the contract the Government now holds with Alabama Power Co. (Mr. Butler)-----	914-915
Advantages of (Mr. Butler)-----	903-910, 991-993
Amendments to appendix-----	1146
As absurd as it is, it is a better contract than that of the Alabama Power Co. or the Ford contract (Mr. Levering)-----	940
Bond will be given for the faithful performance of everything the corporation agrees to do as lessee, and is to be approved by the Government (Mr. Butler)-----	915
Chief interest of, is the operation of Muscle Shoals property as provided for in the national defense act (Mr. Butler)-----	908, 928
Defects of (Mr. Levering)-----	939-940
Disadvantages of Ford proposal as compared with (Mr. Butler)-----	989-993
Does not ask for a subsidy from the Government. A part of the profits from sale of power will be used to subsidize the making of nitrates (Mr. Butler)-----	905-906, 929
Explanation of certain paragraphs (Mr. Butler)-----	907-908, 916
Fifty-year lease asked for under (Mr. Butler)-----	907
Government pays 5 per cent in addition to the cost of construction under (Mr. Butler)-----	911, 919
Importance of best possible construction on Muscle Shoals property emphasized in (Mr. Butler)-----	907
Letter of submittal to the Secretary of War, dated February 23, 1922, text of-----	895-896

Proposal of Mr. Engstrum—Continued.**Page.**

No connection between proposed corporation and Mr. Duke (Mr. Butler)-----	930
No connection between proposed corporation and Virginia-Carolina Chemical Co. (Mr. Butler)-----	930
No preference asked at end of 50-year period (Mr. Butler)-----	991
Payments to Government under, compared with Ford offer (Mr. Butler)-----	993
Returns to the corporation depend entirely upon its ability to make a profit out of excess power (Mr. Engstrum)-----	936
Sections 15 and 18, discussion of (Mr. Stoll and Mr. Butler)-----	931
Services of Gen. G. W. Goethals have been secured as engineer in charge of construction (Mr. Butler)-----	935
Text of-----	896-899
Text of, amendment to section 19, regarding cost of construction (Mr. Butler)-----	907
There will be seven directors in all in the proposed company; Mr. Engstrum one, Mr. Butler one, two to be named by the Government, and three others by the company (Mr. Butler)-----	930
Tried to make it safe for the proposed company, did not want to take any element of chance (Mr. Engstrum)-----	937
(See also Estimates: Expenditures of the Government, and Estimates: Savings to the Government.)	

Proposals of Mr. Ford:

First, dated July 8, 1921—	
Reported upon by Secretary of War-----	3-9
Text of-----	10-12
Letter of January 11, 1922, modifying first proposal, text of-----	13
Present, dated January 25, 1922—	
Acceptance of, is in no way interfered with by option of Air Nitrates Corporation (Mr. Almon)-----	1008-1009
Advantages of, estimate of \$475,840,000 saved to the Government (Mr. Fields)-----	607-608
Advantages of, possible (Major Burns)-----	237-238
Advantages to the Government as compared with first proposal (Secretary of War's report)-----	6-8
American Cyanamid Co., which denounces, as a subsidy at 4 per cent interest, asked for identical thing at 3 per cent in 1916 (Mr. Bower)-----	623
Analysis of—	
Chief of Engineers-----	19-21
Chief of Ordnance-----	17-19
Mr. Almon-----	1003-1006
Better proposition than that of Alabama Power Co., financially, for the Government, for the interests of agriculturists, and for maintenance of plant for manufacture of explosives (Mr. Bower)-----	632
Can not be accepted under existing law (Mr. Hammitt)-----	450, 454
Clause might be added to protect Government in event of mortgage being placed by company (Mr. Mayo)-----	281
Compared with that of Alabama Power Co. (Mr. Martin)-----	884-885
Comparison of Advantages and disadvantages by Chief of Ordnance-----	19
Defects in (Mr. Levering)-----	942-943
Depreciation plus maintenance cost annually of plant No. 2, \$2,700,000 (Army engineers' estimate), is taken over by Mr. Ford and in two years he would pay the Government more than Alabama Power Co. would pay in cash (Mr. Bower)-----	631
Disadvantages of Alabama Power Co. proposal as compared with (Mr. Almon)-----	1015
Disadvantages of, as compared with Engstrum proposal (Mr. Butler)-----	980-983
Discussion of (Secretary of War's report)-----	3-9
Discussion of certain sections of (Mr. Mayo)-----	259-261
Fertilizer can be furnished to farmer at one-half the present costs under (Mr. Bower)-----	623

Proposals of Mr. Ford—Continued.

Present, dated January 25, 1922—Continued.

	Page
\$5,000,000 offered for plants compared with estimate of salvage value made by Chief of Ordnance	9
Gorgas-Warrior steam plant, necessary that it be included in proposition (Mr. Worthington)	31
Gorgas-Warrior steam plant not necessary for operation of project (Colonel Joyes)	105
Gorgas-Warrior steam plant should be eliminated from (Major Burns)	211-22
Government balance sheet of Muscle Shoals during construction and for first six years under (Mr. Mayo)	23
Government expenditures under, will amount to \$1,275,000,000 (Mr. Cooper)	40
Indorsed by Alabama delegation in Congress as a unit (Mr. Almon)	102
Indorsed by American Farm Bureau Federation	41-2
Indorsed by American Farm Bureau Federation, reasons stated (Mr. Bower)	615-632
Indorsed by American Farm Bureau Federation resolutions (Mr. Silver)	542-544
Indorsed by Farmers' Union by resolution (Mr. Bower)	639
Indorsed by Governor of Tennessee	319-322
Indorsed by Mr. McDuffie, a Representative in Congress from Alabama	1022
Indorsed by Mr. Worthington of the Tennessee River Improvement Association	35
Indorsed by petition of officials of Jefferson County, Ala. (Mr. Almon)	1017-1018
Indorsed by resolution adopted at a mass meeting of 5,000 citizens of Alabama (Mr. Oliver)	994-996
Indorsed by resolutions adopted by Florence Chamber of Commerce, Florence Rotary Club, and Florence Exchange Club (Mr. Almon)	1015-1017
Indorsed by resolutions of Birmingham mass meeting (Mr. Almon)	1017
Indorsed by Senators from Alabama (Mr. Bankhead)	1018
Language of section 14, discussion of—	
Mr. Hill and Mr. Mayo	981
Mr. James and Mr. Mayo	977-978
Language of section 14 modified (Mr. Mayo)	971
Language of section 15, discussion of—	
Mr. Crowther and Mr. Mayo	307-308
Mr. Silver	574-576, 588-591, 613-614
Mr. Worthington	378-379
Language of sections 14 and 15, suggested changes in, agreed to by Mr. Mayo (Mr. Silver)	988-989
Mr. Ford can not make nitrates at 8 per cent profit at present, but he can make automobiles at Muscle Shoals with greater profit than at Detroit (Mr. Butler)	992
Mr. Ford offers to purchase property which has cost the Government \$85,000,000 for the pittance of \$5,000,000 (Mr. Butler)	992
Mr. Ford would not object to added clause in the deed regarding production of explosives in time of war at nitrate plant No. 2 (Mr. Mayo)	303
Mr. Ford's intention to spend amount necessary to develop plant to use all power producible (Mr. Mayo)	282
Modifications suggested by Secretary of War	9
Must be accepted as a whole and not in part	16
Opposed by National Fertilizer Association (Mr. Bower)	629
Opposed by National Fertilizer Association, reasons stated. (Mr. Mac Dowell)	523-527
Payments to Government under Engstrom proposal compared with (Mr. Butler)	993

Proposals of Mr. Ford—Continued.**Present, dated January 25, 1922—Continued.****Page.**

The people of this Nation would derive more from Muscle Shoals even if Congress gave the whole project to Henry Ford than they can ever hope to gain by selling it under any other offer which has been presented (Mr. McDuffie).....	1026
Power developable one of prime factors considered in making bid (Mr. Mayo).....	275
Proposal of Alabama Power Co. is unquestionably a better contract than (Mr. Frothingham).....	968
Purchase price of plants compared with estimate of salvage value made by Chief of Ordnance.....	18
Reasons of fertilizer industry for opposition to (Mr. Bower).....	619-621
Relation of purposes of Tennessee River Improvement Association to (Mr. Worthington).....	400
Reported upon by Secretary of War.....	3-9
Results that might be expected should Mr. Ford develop cheap power for sale, discussion of (Mr. Miller and Mr. Frothingham).....	956-957
Statement No. 1 re difference between Mr. Ford's lease payments to the United States Treasury and the amount the Treasury will have to pay out if Mr. Ford's proposal is accepted as written (Mr. Cooper).....	410-411
Statement No. 2 re amount of low-tension hydroelectric energy delivered to generator station bus bars that will be created by the completion of Dams Nos. 2 and 3 according to the requirements of Mr. Ford's proposal (Mr. Cooper).....	411-412
Statement No. 4 re showing if 4 per cent interest is paid by Mr. Ford on total cost of Dams Nos. 2 and 3, and pays \$79,432 annually to amortize \$83,175,475, which is the above total cost (Mr. Cooper).....	413
Statement of Department of Agriculture.....	316
Summarized (Secretary of War's report).....	6
Table showing cost to Government of the delay in accepting Ford offer (Mr. Almon).....	1005
Table showing Government balance sheet under Ford proposal (Mr. Mayo).....	301
Terms of, compared with income of Reclamation Service and Panama Canal (Mr. Almon).....	1004
Text of.....	13-17
Text of, modifications in (Mr. Mayo).....	971
Text of, modifications in language of sections 14 and 15 agreed to by Mr. Mayo (Mr. Silver).....	988-989
Two basic defects in (Mr. Butler).....	992
Will be of lasting benefit to agriculturists (Mr. Bower).....	631
Would be most favorable trade the Government has ever made with an individual (Mr. Fields).....	608
(See also Estimates: Expenditures of the Government; and Estimates: Savings to the Government.)	
Public Service Commission of Alabama:	
Alabama public utility act, text of sections of.....	55-56
If Mr. Ford is to have a straight lease he would be exempted from action of Federal water power law or laws of Alabama (Mr. Cooper).....	418
Might regulate sale of power by Mr. Ford (Secretary's War's report).....	9, 54, 56
Power to be sold by Mr. Ford would probably be under State of Alabama law (Mr. Mayo).....	243
Price at which Mr. Ford would sell power would be controlled by the Public Utility Commission of Alabama (Mr. Worthington).....	376
Purchase offers made by Mr. Ford, text of.....	11, 15
Railroad land grants:	
Government does not receive interest for (Mr. Quin and Mr. Worthington).....	394-395
Reclamation Service:	
Annual gross income compared with terms of the Ford offer (Mr. Almon).....	1004

Rentals offered by Mr. Engstrum:	Page
Mr. Engstrum proposes to sell the surplus power at wholesale, and set aside 1 mill for each kilowatt-hour of power sold, to be paid into the United States Treasury as rental for the lease of the property (Mr. Butler).....	906, 91
Rentals offered by Mr. Ford:	
Analysis of (Mr. Morin).....	24
Dam No. 2, text of proposals.....	10, 13-1
Dam No. 3, text of proposals.....	11, 1

Steam plants. (<i>See</i> Gorgas-Warrior steam plant, and Power plants.)	
Stone & Webster (Inc.) hydroelectric plants (Appendix A)-----	1141
Subsidy:	
American Cyanamid Co., which denounces Ford proposition as a sub- sidy at 4 per cent interest, asked for identical thing at 3 per cent in 1916 (Mr. Bower)-----	623
Engstrum proposal does not ask for a subsidy from the Government; a part of the profits from sale of power will be used to subsidize the making of nitrates (Mr. Butler)-----	905-906, 929
If nitrate plant No. 2 can not be operated at a profit, then no subsidy is involved in selling plants to Mr. Ford for \$5,000,000 (Mr. Bower)-----	632
Nitrate plant No. 2 can not be operated commercially without (Mr. Hammitt)-----	456
To Mr. Ford—	
Opposed by Mr. Hammitt, of the American Cyanamid Co.-----	458
Proposed development is not a subsidy (Mr. Silver)-----	573, 579-580
Word might be applied to war material sold by the Government, argu- ment developed showing (Mr. Fields and Mr. Silver)-----	606
Word not applicable to proposition (Mr. Hull)-----	458
Sullivan & Cronwell, law firm, represented American Cyanamid Co. in contract matters (Mr. Hammitt)-----	488, 501
Sulphate of ammonia. (<i>See</i> Ammonium sulphate.)	
Sulphuric acid, equipment for production of, shipped to Muscle Shoals from former Government plant at Nashville-----	548
Swann, Theodore, president Federal Phosphorus Co., statement-----	431-443
Synthetic ammonia process: Fixed nitrogen which is to be made in the future is going to be made by a, simply for the reason that there is no other process in the world that can compete with it commercially (Dr. Parsons)-----	1124
Synthetic process of the General Chemical Co., was used at nitrate plant No. 1, (Mr. Almon)-----	1002
Tables:	
Alabama Power Co. rates for electric current at Huntsville, Ala., in effect January 1, 1922 (Mr. Worthington)-----	363
Amount retired by Mr. Ford's sinking fund at various rates of interest, compounded semiannually (Secretary of War's report)-----	7
Analysis of Mr. Morin's statement of non-interest-bearing charges on Dam No. 2 (Mr. Mayo)-----	249
Annual cash saving to Government by acceptance of Ford offer (Mr. Almon)-----	1005
Average increase per acre of all fertilizer experiments in the United States published up to 1910, with the number of experiments re- ported up to that time-----	345
Carrying charges on construction of dams (memorandum of Chief of Engineers)-----	20
Comparative prices of nitrogen compounds-----	536
Consumption of fertilizers in the United States, fiscal years end- ing 1913 to 1920. (From American Fertilizer Handbook for 1921) (Mr. Mayo)-----	202
Core recovery at dam sites-----	114
Cost statement of United States nitrate plants Nos. 1 and 2 and Warrior-Sheffield power station and transmission line (mem- orandum of Chief of Ordnance)-----	21-22
Cost to Government of the delay in accepting Ford offer (Mr. Almon)-----	1005
Costs and estimates of nitrate plants Nos. 1 and 2 (report of Muscle Shoals Committee of American Farm Bureau Federation)-----	551
Costs and estimates of the Wilson Dam (Dam No. 2) (Report of Muscle Shoals Committee of American Farm Bureau Federa- tion)-----	551-552
Detailed estimate of cost of sulphate of ammonia and nitrate of ammonia at United States nitrate plant No. 2 (Major General Williams)-----	97
Electric light and power security issues in 1921-----	356
Estimate of results of operation by Government of United States nitrate plant No. 2 for period of 6 years (Major General Williams)-----	84-85

Tables—Continued.

Page.

Estimated cost (exclusive of interest charges) of producing phosphoric acid by the electric-furnace method, assuming power at \$25 per horsepower year.....	554
Estimated salvage value of ordnance property in the State of Alabama (memorandum of Chief of Ordnance).....	18
Estimated supply and consumption of nitrogen for 1924 and 1930, in tons of pure nitrogen.....	555
Fertilizer production (Major General Beach).....	106
Fertilizer tonnage by States.....	98, 107, 343
Fertilizer tonnage in 1913 and 1919.....	341
Food requirements of plants (Mr. Bower).....	627
General statement concerning power situation in Alabama and contiguous territory (Mr. Martin).....	799
Government balance sheet at Muscle Shoals during first 6 years of Ford lease of Dam No. 2 (Mr. Mayo).....	301
Government balance sheet of Muscle Shoals during construction and for first six years under Ford proposal (Mr. Mayo).....	248
Illustrating decrease in net investment of Government due to operation of a sinking fund (Mr. Mayo).....	299
Interest-bearing debts of the Government (Mr. Silver).....	608
Maintenance or stand-by expense of nitrate plants Nos. 1 and 2.....	556
Manufacturing cost of ammonium nitrate at United States nitrate plant No. 2.....	553
Manufacturing cost of ammonium sulphate at United States nitrate plant No. 2.....	554
Manufacturing cost of calcium cyanamid (lime-nitrogen) at United States nitrate plant No. 2.....	552-553
Nitrogen in red clover and cowpeas.....	555
Per cent of interest on Government loans now outstanding in the shape of bond issues (Mr. Almon).....	1007
Rates charged by Alabama Power Co. for hydroelectric power supplied to large consumers with service requirements comparable to those of the United States Government at nitrate plant No. 2 (Mr. Martin).....	681-682
Resources of the Tennessee Valley and immediate vicinity (Mr. Worthington).....	387
Royalties payable to Air Reduction Co. and American Cyanamid Co. Salvage to Government from war-time investments compared with Ford offer (Mr. Almon).....	556
Showing the total amounts of horsepower of the principal completed hydroelectric developments in the Carolinas, Georgia, Alabama and Tennessee (Mr. Worthington).....	1004
Statement No. 1, re difference between Mr. Ford's lease payments to the United States Treasury and the amount the Treasury will have to pay out if Mr. Ford's proposal is accepted as written (Mr. Cooper).....	389
Statement No. 2, re amount of low-tension hydroelectric energy delivered to generator station bus bars that will be created by the completion of Dams Nos. 2 and 3 according to the requirements of Mr. Ford's proposal (Mr. Cooper).....	410-411
Statement No. 3, re operation and maintenance of Muscle Shoals water powers (Mr. Cooper).....	411-412
Statement No. 4, re showing if 4 per cent interest is paid by Mr. Ford on total cost of Dams Nos. 2 and 3, and pays \$79,432 annually to amortize \$83,175,475, which is the above total cost (Mr. Cooper).....	412-413
Statement showing actual total expenditures for maintenance and improvement of rivers and harbors from the fiscal year ending June 30, 1898, to that ending June 30, 1920, inclusive (statement compiled by J. H. McGann, clerk of the Committee on Rivers and Harbors).....	413
Total acreage in crops in 1919, the tonnage of fertilizers sold in each State, and the additional amount of ammonia required to bring the intensity of use at least up to the present practice in Georgia.....	391
Water power at Muscle Shoals.....	340-341
World capacity of air nitrogen plants (Mr. Mayo).....	555
World's production of mixed inorganic nitrogen.....	250
	556

	Page
Taylor, Hon. A. A., Governor of the State of Tennessee; statement....	319-322
Tennessee Power Co.:	
Intercompany relations with American Cyanamid Co.; no connection between companies (Mr. Hammitt).....	484
Letter of May 20, 1921, from; inadvisable for Government to develop Muscle Shoals.....	118-121
Tennessee River:	
Cost of making, navigable over Muscle Shoals, if dams are not constructed, estimated at something over \$8,000,000 (Major General Beach).....	123
Erratic flow of, reason stated (Mr. Frothingham).....	985
Extreme minimum flow of, 7,000 second-feet (Mr. Frothingham)...	947, 954
Greatest value in, may only be realized by tying together by transmission lines the capacities of the Coosa and Tallapoosa Rivers (Mr. Frothingham).....	948
Hydrographs of, at Florence, Ala.....	118, 119
Is in itself, as an independently power-producing stream, disappointing and of very little availability (Mr. Frothingham).....	948
Is the greatest water power in the Southeast only if coordinated with the other power and storage reservoir possibilities in the vicinity, otherwise it is of comparatively little value (Mr. Frothingham)....	962-963, 965
Navigability of—	
General Beach.....	122, 129
Hon. A. A. Taylor.....	320, 321-322
Mr. Worthington.....	370-371, 404
Navigation of, would not alone justify proposed expenditures of Government (Mr. Worthington).....	407
Tennessee River between Browns Island and the railroad bridge below Florence, Ala.:	
Extract from report of Maj. H. Burgess of March 22, 1916, on preliminary examination of.....	788-789
Letter of June 26, 1916, from Chief of Engineers on preliminary examination and survey, text of.....	786-787
Proposal of December 10, 1913, of Muscle Shoals Hydro-Electric Power Co., for development of, text of.....	782-784
Report of May 18, 1914, of Board of Engineers for Rivers and Harbors on proposed development of, text of.....	781-782
Tennessee River Improvement Association:	
Purposes of (Mr. Worthington).....	400
Statement of Mr. Worthington, chairman of executive committee...	351-408
Tennessee River Valley, natural resources of (Mr. Worthington)...	386-388
Tolman, Dr. Richard C., director, Fixed Nitrogen Research Laboratory, Department of Agriculture, statement.....	313-319
Transmission line. (See Right of way for transmission line, and Warrior-Sheffield transmission line.)	
Transmission of power, electrical: Alabama Power Co., sending 250 miles (Major General Beach).....	101
Transportation:	
The building of the dams as provided in the Ford offer will open up cheap water transportation on the upper Tennessee River (Mr. Almon).....	1008
Cost of completing dams by the Government would be warranted by amount of (Mr. Quin).....	396
(See also Navigation.)	
Trust fund under Engstrom proposal—	
One mill per kilowatt hour of power sold to be set aside for, to go into United States Treasury, or into financing of nitrates (Mr. Butler).....	909, 928
When business gets dull, all the corporation has to do is to finker with the nitrate plant, and use up all the money in (Mr. Levering).....	939
Unemployment would be relieved by construction of dams (Secretary of War's report).....	9
Urea, description of (Dr. Tolman).....	313, 317

Virginia-Carolina Chemical Co.:

	Page.
Interest of Mr. Duke in—	
Company controlled by Mr. Duke (Mr. Bower).....	623, 637
Statement regarding Mr. Duke's alleged connection with (Mr. Hammitt).....	496
Large company producing fertilizer (Mr. Weeks).....	29
No connection with the proposed corporation under the Engstrom proposal (Mr. Butler).....	930
Stockholdings in American Cyanamid Co.—	
Mr. Hammitt.....	467, 496, 503
Are 26 per cent of stock (Mr. Bower).....	623

Waco quarry:

Acres of 460 acres, acquired for \$52,962.88 (Secretary of War's report).....	5
Cost, \$1,179,078.80 (Secretary of War's report).....	5
Cost, \$1,302,962.88 (memorandum of Chief of Ordnance).....	22
Idle at present (Secretary of War's report).....	5
Offers of Mr. Ford to purchase, text of.....	11, 15
Salvage value estimated by Chief of Ordnance.....	18

War, Secretary of. (*See* Secretary of War.)

Warrior-Muscle Shoals transmission line:

Salvage value estimated by Chief of Ordnance.....	18
(<i>Same as</i> Warrior-Sheffield transmission line.)	.

Warrior-Sheffield transmission line:

Consists of wooden poles with copper wire.....	195
Constructed by Government on land owned by Alabama Power Co. (Mr. Weeks).....	40

Contract with Alabama Power Co.—

Opinion of November 16, 1921, of Acting Judge Advocate General.....	132-134
Text of.....	150-171
Cost of construction (memorandum of Chief of Ordnance).....	22
Cost of maintenance (memorandum of Chief of Ordnance).....	22
Description schedule in contract.....	169
Offer to purchase by Alabama Power Co., text of proposal.....	776
Salvage value estimated by Chief of Ordnance.....	18
(<i>Same as</i> Warrior-Muscle Shoals transmission line.)	

Warrior steam plant. (*See* Gorgas-Warrior steam plant.)

Washburn, Frank S., president of American Cyanamid Co.:

Production of nitrogen compounds at nitrate plant No. 2, statement on (Mr. Mayo).....	253
---	-----

Statements of—

On February 9 and March 16, 1916, before Committee on Agriculture regarding fertilizer industry (Mr. Bower).....	618-619, 623-624
Prior to the war, based on conditions radically different from present conditions (Mr. Hammitt).....	449
Stockholdings of, in American Cyanamid Co. (Mr. Hammitt).....	504
Was president of Alabama Power Co. from 1913 to 1915, continued as director until 1916 (Mr. Martin).....	684, 687
Was stockholder in Alabama Power Co., is not now (Mr. Martin)...	643

Water power:

Principal power-producing streams of Georgia, discussion of (Mr. Wright and Mr. Frothingham).....	963-964
Table showing, at Muscle Shoals.....	555
Tennessee River is the greatest in the Southeast only if it is coordinated with other power and storage reservoir possibilities in the vicinity; otherwise it is of comparatively little value (Mr. Frothingham).....	962-963, 965
(<i>See also</i> Power.)	

Weeks, Hon. John W., Secretary of War:

Report of, dated February 1, 1922, discussing Mr. Ford's proposals...	3-25
Statement.....	25-66
(<i>See also</i> Secretary of War.)	

Whitney, Dr. Milton, Chief, Bureau of Soils, Department of Agriculture, statement.....	322-349
--	---------

Williams, Col. William:	Page
Office order No. 157, of 1918, which appoints among others Lieutenant Colonel Williams, Ordnance Department, as a contracting officer, text of (Major Booton)-----	88
Represented Ordnance Department in making contracts-----	64 ^c
	666, 683, 727-728, 88
Williams, Maj. Gen. C. C., Chief of Ordnance:	
Analysis of Ford proposal-----	17-18
Statement-----	57-59
Table showing cost of United States nitrate plants Nos. 1 and 2 and Warrior-Sheffield power station and transmission line-----	21-22
Wilson, Woodrow, letter of February 23, 1918, relative to Dam No. 2, text of-----	64
Wilson Dam. (See Dams: No. 2.)	
Worthington, J. W., chairman of the executive committee of the Tennessee River Improvement Association:	
Sold his interests in Muscle Shoals Hydro-Electric Power Co. in 1912, but continued as an officer of the company until February, 1920 (Mr. Martin)-----	779
Statement-----	351-408
